Mr. STEVENS. Mr. President, by May 1 the Federal Power Commission will recommend to the President one of the three proposals for transporting natural gas from Alaska's North Slope to the lower 48. The proposal that I and a good number of our colleagues support is the one which would pipe natural gas down the trans-Alaskan pipeline corridor from Prudhoe Bay to Cordova. The natural gas would be converted into a liquid state and shipped via LNG vessel to the west coast.

The proposal, offered by El Paso, Alaska, provides the most viable means of transporting a much needed resource from Alaska to the consumer in parts of the country now starved for natural gas supplies. The other two proposals would route the gas through pipelines to be constructed through thousands of miles of pristine Canadian wilderness, possibly risking inestimatable environmental damage before it eventually arrives in the United States.

One of the concerns sometimes expressed by opponents of the all-American trans-Alaskan route is the safety of transporting liquefied natural gas aboard ship. Mr. President, I wish to offer colleagues an editorial printed in the Fairbanks News Miner that discusses the safety factors of LNG. The editorial notes that according to an article in the prestigious Scientific American:

The risk to people living and working near an LNG tanker terminal is estimated to be about one fatality for every 10 million years.

I ask unanimous consent to have printed in the Record the editorial that so eloquently allays the fears of some about LNG safety.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAFETY OF LNG TANKERS

The Federal Power Commission has closed its final Alaskan gas pipeline hearings and is weighing tons of evidence for its decision May 1, but someone should send them the April edition of "Scientific American" before the time is up.

fore the time is up.

The issue of the prestigious scientific journal now on newsstands leads off with a fascinating article on the safety of liquefied natural gas tankers proposed for the El Paso Gas Co. pipeline proposal.

The article is by Elisabeth Drake, manager of the Hazard Assessment and Control Unit at Arthur D. Little Inc., and Robert C. Reid, codirector of the Liquid Natural Gas Research Center at the Massachusetts Institute of Technology. It answers a great many questions that have been posed during the gas pipeline debate, and it answers them all in favor of the LNG tanker system.

LNG is natural gas that is cooled to a temperature of -259 degrees Fahrenheit, then shipped in insulated metal spheres built into a special new breed of ship. Japan imports about 80 per cent of its natural gas supplies in this form, from Alaska and Indonesia, and Middle Eastern gas which has been flared for many years is now being liquefied for shipping to Europe and the east coast of the United States.

El Paso's pipeline proposal calls for a pipeline to Cordova, and liquefaction of about 25 times the amount we're currently exporting from Cook Inlet.

Opponents of the all-Alaska pipeline system have occasionally called for studies of the dangers in shipping LNG, and have oc-

casionally advanced questions of what would happen if two of the tankers collided and released huge clouds of flammable natural gas up wind of a major city. The Scientific American article should go a long way to answering these questions.

The risk of people living and working near an LNG tanker terminal, according to the article, is estimated to be about one fatality for every 10 million years. The risk is 10 times less than the risk of dying in a fire at home and about the same as that of being struck by lightning.

The authors conclude the hazards of shipping LNG are about the same as for gasoline, propane and natural gas in its gaseous state. They say LNG appears to be a promising source of energy and can be expected to be even safer as experience and research pro-

Several of the points are:

LNG is less than half as dense as seawater, so LNG tankers ride much higher in the water and are much less subject to groundings

Before LNG is released in an accident, the hull of a ship would have to be broken , with such a force that the metal spheres carrying the cargo are also broken, would require much greater impact than if the ships were built like oil tankers.

Researchers have tried and failed to make clouds of natural gas vapor burn with explosive force in the open atmosphere

LNG spilled on water can explode in a phenomenon called "flameless vapor explosion", but the explosions can only take place when the LNG contains high quantities of ethane and propane and these liquids are stripped out of gas before being liquefied for shipping. Even with the flameless vapor ex-

plosions, damage is slight.

Excessive pressures in storage tanks can occur when LNG of differing temperatures is allowed to "stratify" in the tanks, but standard procedures prevent this from hap-

pening in modern facilities.

Effects of LNG spills from storage tanks can be held to the area of the tanks by dikes, in the same way oil spills are contained around terminal sites.

We noted several weeks ago that the recent worries about oil tanker accidents should focus attention on how LNG tankers are built and operated with much greater safety factors. The Scientific American article is a timely reminder of this, and should be studied by everyone interested in the gas pipeline route questions.

CREATING NATIONAL ENERGY POLICY

Mr. ANDERSON. Mr. President, the Upper Midwest Council, a Twin Citiesbased, nonpartisan, nonprofit corporation promoting better understanding of regional choices for the future of the upper Midwest, has analyzed energy issues intensely since 1973. The Upper Midwest Council was formed in 1959 by a group of concerned leaders throughout the Ninth Federal Reserve District in response to needs for more information on regional socioeconomic trends and options available to stimulate growth and improvement in the upper Midwest community.

Mr. President, last month a task force of the Upper Midwest Council issued a report entitled "Creating National Energy Policy," the seventh major analysis on energy prepared by the council. The Upper Midwest Council began its future choices; energy research and education program in 1973. Following two conferences and one study which defined many national and regional energy problems, council began studying specific policy options and problems. In mid-1974, a report entitled "Managing Our Energy Future" was issued. It described major energy questions facing the upper Midwest.

During 1975 and 1976, the council conducted detailed analyses of the development and use of northern Great Plains coal. Two reports were issued, idenitfying problems and issues and offering several recommended actions.

Since mid-1976, the council has continued to study a number of energy policy issues, including: oil imports, enduse efficiency, energy prices, energy use and economic growth, and the need for improved leadership. A paper entitled "America's Energy Future: Crises Are Just Around the Corner" was issued in October.

During this period, the council staff examined proposed alternatives for transporting Alaskan natural gas to the 48 States. It recommended, in August 1976, that the arctic gas proposal be

approved.

The recent report, "Creating National Energy Policy," is designed to input processes for development of national energy policy; it is not a statement of energy policy. It identifies needed national energy policy objectives and the critical areas of focus which are the basis for energy policy development. It also suggests several specific actions for consideration.

The strength of this energy studies program has been the council's ability to draw upon the expertise of a great many individuals and organizations well versed in energy matters and perceptive of the myriad of problems and interrelationships which make up energy policy.

The Upper Midwest Council is continuing its work in all of the above areas. Other information now being developed will consider specific roles and opportunities for States and regions to address energy problems and alternatives.

Mr. President, many distinguished Minnesotans and other residents of the area encompassed by the Ninth Federal Reserve District have contributed to the work of the council. I ask unanimous consent that the task force members that prepared "Creating National Energy Policy" be printed in the RECORD.

There being no objection, the membership list was ordered to be printed in the RECORD, as follows:

TASK FORCE MEMBERS

Robert Benson, Manager of Market Research, Minnesota Gas Company.

Lloyd Brandt, Vice President, Public Affairs, First Bank System.

Krzysztof, Burhardt, Senior Specialist, Engineering Systems and Technology, 3M Com-

James Carter, Director of Research, Minnesota Energy Agency.
David Dahl, Economist, Federal Reserve

Bank of Minneapolis.

Robert Darr, Manager, Corporate Plant Engineering Services, Control Data Corporation.

Gerald Everett, Executive Director, Northwest Petroleum Association.

Burton Genis, Assistant Manager, Minnesota Joint Board, Amalgamated Clothing Workers of America.

John Haaland, Vice President, Information, Management and Environmental Systems, The Pillsbury Company.

G. C. Hann, Vice President, Apache Corpo-

Richard Hargarten, Group Director for Physical Distribution, Toro Company. J. W. Haun, Vice President, Engineering Policy, General Mills, Inc.

James R. Heltzer, Government Affairs Co-ordinator, Dayton Hudson Corporation.

Ed Hogan, Program Director, Greater Minneapolis Chamber of Commerce.

John S. Hoyt, Jr., Professor and Program Director, Computer Information Systems, University of Minnesota.

Marion J. Kloster, Director of Corporate Engineering, The Peavey Company.

Richard Kolkmann, Manager, Energy Fore-casting, Northern State Power Company.

Wilbur R. Maki, Professor, Agricultural and Applied Economics, University of Minnesota. Norwood Nelson, Manager, Plant Engineering, Oran Corporation.

Robert F. Piculell, Manager of Transportation and Logistics, Northwestern Refining Company.

John Sampson, Northwest Bancorporation. D. L. Sheridan, Marketing, Northwestern

Bell Telephone Company.

Ernesto Venegas, Director of Forecasting and Impact Analyst, Minnesota Energy

Allan Wessel, Associate Department Manager, Mechanical Engineering, Ellerbe Architects.

Steven Woolley, Program Director, Urban/ Rural Division, Chamber of Commerce of the United States.

Mr. ANDERSON. Mr. President, we are all aware that President Carter this week will present his recommendations on national energy policy to the Congress and the American public. The Upper Midwest Council report is particularly germane to all Members as we consider the President's recommendations. I ask unarimous consent that the summary and action proposals sections of 'Creating National Energy Policy" be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SUMMARY

The United States does not lack solutions to its energy problems; but so far it has been unable to make the difficult tradeoffs and required decisions which may be unpopular at present yet beneficial over time.

National energy policy should have three objectives:

1. An explicit and controllable oil imports program. 2. Reduced growth in energy demand and

use.

3. Increased production of domestic energy supplies.

Primary focus should be placed on implementing the following strategies which form the major building blocks for policy development. Energy policy must:

Increase public understanding and support. Policy objectives will not be reached without greater consensus and cooperation.

Recognize that government cannot solve all energy problems. It should stimulate responsible actions by citizens and businesses.

Improve public and private decision making. These processes must be efficient, orderly and timely to assure that agreed-upon programs can be implemented without delay.

Raise energy prices significantly. Demand must be reduced and supplies from traditional sources increased. Price increases must be sustained, not one-time, actions.

Stress use of the marketplace for energy supply and demand decisions. However, government intervention should and will occur at times.

Accelerate coal production and utilization. Greater coal use is critical to overall energy policy and, in particular, to management of oil import volumes.

Recognize that all energy problems and opportunities are interrelated. Actions to raise prices or to limit access to fuels must be matched with availability of economical and technically feasible alternatives.

Assess environmental protection programs and needs. They must be administered consistent with needs to develop our domestic energy resources, particularly coal.

Understand energy use and economic growth relationships. A national task force should study this fundamental question.

Study broad, long-term options. New tech-

Study broad, long-term options. New technologies, lifestyle changes and economic opportunities require long periods of analysis and development far in advance of actual

The nation needs national energy policy action quickly. There are other urgent problems—drought, unemployment, continued inflation, consumer difficulties, international issues—which can and will shift decision makers' attention. Energy programs should not be left unattended until yet another round of problems develop.

There are few if any easy solutions. Even strong and serious actions can only minimize energy problems during the next five to ten years.

Uncertainty is widespread. Producers, consumers, investors, business leaders and working people alike are in doubt regarding the future of national energy policy. It is important that policies proposed and actions taken are based upon clear, predescribed objectives.

The nation's fossil fuel resources are finite. While coal reserves can help meet American energy needs well into the next century, supplies of crude oil and natural gas will disappear much more quickly. Energy policy must include recognition of these facts. A realistic time-table for moving away from fossil fuels is imperative nationally in both the short and long term.

OIL IMPORTS POLICIES

An imports policy should be definitive, creating greater certainty for producers, processors and consumers. Today, there is an implied policy to use imports to fill any supply/demand gap not addressable with domestic energy resources. A decision should be made on a controllable program for managing imports and, over time, reducing dependence on imports. National security concerns, economic growth requirements and needed expansion of domestic oil production and processing are major reasons.

Given current time constraints for increas-

Given current time constraints for increasing domestic energy production and reducing demand, imports will have to increase during the next five to ten years. Greater reliance on imports will allow additional time to resolve domestic supply/demand problems and environmental concerns and, at the same time, help maintain economic improvement.

An express part of an oil imports policy should be a program, initiated within ten years, to begin reducing oil import volumes. During this five to ten year period, the mix of secure versus insecure imports sources should be balanced increasingly in favor of secure sources.

Even continued growth in imports will require rapid and large increases in coal utilization by utilities and by current large-volume, oil-using industries. Non-attainment standards of the Clean Air Act now obstruct this and must be dealt with. To implement shifts to coal, utility rate adjustments will be necessary, as will use of tax credits for industries.

Accelerated government-supported development of other coal conversion technologies—gasification and liquefaction—should occur. In addition, Alaskan oil must be made available to regions most in need, including the Midwest, an area already affected by declining Canadian oil exports. One or more pipelines are needed to move Alaskan oil from the West Coast to the Midwest.

Increased reliance on imported oil requires a clearly-defined position and contingency plans to insure national security. There must be strategies for dealing with possible sudden and substantial changes in import prices and consequent economic and trade balance impacts. Development of strategic oil reserves will be increasingly necessary (and costly) as imports increase.

costly) as imports increase.

Growth in import volumes could place the U.S. in more-direct and stronger competition with other nations which, today, already are greatly dependent on imports. Potential implications of increased demand pressure on foreign oil reserves and national policies of those nations must be understood.

DEMAND REDUCTION POLICIES

Improving energy-use efficiency is the nation's best immediate and long-term supply strategy; it is the cheapest source of energy. Improved end-use efficiency can provide the greatest amount of relief during the next five to ten years. To accomplish this, however, energy prices must be increased through de-regulation and, possibly, higher fuel taxes; and a balanced and consistent mix of tax incentives, subsidies, penalties and end-use restrictions must be developed. Impacts on fixed- and lower-income citizens must be minimized.

Government actions should serve to stimulate the marketplace when and where needed. They should not be employed or sustained where the marketplace can achieve comparable results. While quick de-control of oil and natural gas prices is an alternative way to reduce energy demands, potential political barriers to such abrupt action must be recognized.

Specific consideration should be given to the most practical and efficient methods for improving automobile efficiency and reducing miles driven. This may require a combination of programs, including vehicle license and other surcharges and, possibly, other incentive/penalty programs which would affect the purchase price of vehicles. Steps would have to be taken to insure alternative transportation modes are available to avoid a price squeeze for employment-related and other transportation needs.

Higher vehicle prices and continued crude oil de-regulation will help to reduce gasoline demand; but these methods alone may not be sufficient to achieve desired results in the immediate future. Attempts during the past three years to raise gasoline prices and to prescribe vehicle efficiency improvements have been less successful than desired.

Consideration should be given to substantially increasing gasoline taxes as a direct means of reducing demand and for providing manufacturers clear signals upon which to base future vehicle design and efficiency criteria. This kind of strong and obvious action may be necessary to focus public attention on the seriousness of the nation's energy problems.

Revenues from gasoline taxes should be used to support other energy-related pro-

grams. They should not be put in the general fund. Such taxes should not be used beyond the time needed to accomplish specific enduse efficiencies.

Revenues from gasoline taxes and license surcharges should be used to offset adverse economic impacts for particular users. They also should be used to expand public transportation service. Use of these funds could include increased research and development for mass transit and for other energy-efficiency programs.

Tax increases for other fuels (ie., natural gas and fuel oil) might be considered. Price de-regulation for these fuels will provide incentives for improved end-use efficiency, however. It would appear that residential and commercial heating demands are less discretionary than are gasoline demands; and conversion to other heating systems would be quite difficult.

Tax credits should be developed to help commercial and industrial energy users become more efficient consumers of natural gas and fuel oil. Direct subsidy programs would appear to be the most efficient method for stimulating improvements in residential efficiency.

A number of possible end-use regulations should be considered. These include imposition of uniform appliance and heating/cooling system standards and better materials and design codes for new and existing buildings. Also, end-use regulations may be necessary to eliminate, wherever possible, natural gas burned under large boilers, to save this gas for higher priority users.

All inefficient and one-essential energy usage visibly indicative of waste to the public (i.e., decorative, excessive advertising and other outdoor lighting) should be eliminated

DOMESTIC SUPPLY POLICIES

Few actions to increase energy supplies will have noticeable effects during the next three years due to long lead times. Nonetheless, specific steps must be take now to raise prices, to cause shifts to other fuels, and to accelerate new technological development.

The present program for phased de-control of domestic crude oil prices should be accelerated; and a commitment made to insure total de-control by 1980 as current law specifies. De-control will have to occur at a faster rate than at present to support management of imports.

The wellhead price of "new" natural gas should be de-regulated. One option would be to let the price rise at once to the equivalent-BTU price of #2 fuel oil (about \$3.00 per thousand cubic feet, based upon a current national-average #2 fuel oil price of 4ic per gallon). A second option would be a two-step process to raise prices by about 60 percent (to about \$2.30 per thousand cubic feet) in 1977, followed by total deregulation a year later. Natural gas supplies produced prior to January 1, 1975, should remain controlled in the same manner they are at present.

Natural gas volumes which might leave producing states as a result of higher interstate prices or state-ordered elimination of natural gas for firing utility or other boilers should be allowed to enter the interstate market at the prevailing deregulated "new" gas price.

The proposed Arctic Gas pipeline system should be chosen to move Alaskan natural gas supplies to the 48 states. It is the most economical, efficient and environmentally-sound proposal. It will deliver larger volumes of gas to greater numbers of consumers more quickly than will alternative proposals.

Coal production must be accelerated nationwide if utilities are to build more coalfired plants and shift existing oil and natural gas-fired plants to coal. Demand caused by conversion of large industrial fuel-oil and natural gas users to coal also will require

expanded coal production.

The nation needs a strip mining law acceptable to states in order to reduce producer uncertainties, and to make federal lands a greater source of coal production. Rights of individual states to regulate mining and reclamation on federal lands within their borders should be protected to the maximum extent practicable within mutually agreed-upon minimum federal standards. This could help to avoid unsound environmental and land-use impacts and, at the same time, not impede production.

Existing non-degradation and non-attainment provisions of the Clean Air Act limit industrial and electrical power industry shifts to coal in many regions. To achieve import management goals and to make more fuel oil and natural gas available to commercial and residential users, temporary, yet tightly-controlled, relaxation of air quality laws will be necessary on a tightly con-trolled and monitored basis. Regulatory changes should be combined with extensions of deadlines for meeting existing laws and with provisions for state-level flexibility

to address individual situations.

Relaxation of air quality standards will be particularly necessary in the eastern half of the nation where higher-sulphur coal will have to be used. No relaxation policy would likely be acceptable to the public without time constraints and provisions which would require careful review of impacts in order to insure that improved air quality control technologies are employed within a reasonable period of time after they become available.

Coincident with temporary relaxation of clean air regulations, greatly expanded efforts should be made to develop improved systems for reducing and eliminating air pollutant discharges from coal conversion facilities. In addition, greater emphasis should be placed on coal-cleaning systems and on other coal conversion technologies where federal financial support to accelerate commercialization may be necessary.

Capital costs for converting to coal are high for most all industrial operations. Consideration should be given to providing tax incentives to large fuel oil and natural gas users who may be forced to do so as an element of

national policy.

Electric power production expansion cannot solve our energy dilemmas during the next ten years. Lead times for siting, designing and constructing new facilities are such that decisions made in 1977 will provide new facilities in 1987 or later.

Expanded electric power generation will conflict with environmental and social values in many areas of the nation. In the West, water demands for electric power conflict with other uses and with social values. Degradation of present high-quality environments is opposed strongly. Cooperative state and federal leadership is needed to address these and other equally difficult questions.

Nuclear power should not be ruled out. It has made substantial contributions in several areas of the nation, particularly during the past few years. To make greater use of nuclear power, however, several problem areas need greater attention and resolution. They include: fuel reprocessing, waste storage, plutonium use and handling, and breeder reactor safety and cost-effectiveness.

Between now and 1985, nuclear power will not make increased contributions beyond those facilities now under construction. Beyond that time, nuclear power can con-tribute more, but only if reasoned cost-benefit analyses and political decisions are made

regarding major problem areas.

Most future or "exotic" energy source technologies will produce electric power which must be transmitted to consumers over high-

voltage transmission lines. Exceptions to this are solar systems and coal gasification and liquefaction systems which can be located near demand, or alternatively, coal or plant output can be moved by railroads or pipelines to demand centers.

While states should continue to improve processes for locating transmission lines, greater national emphasis should be placed on development of alternative and more acceptable land-use guidelines and transmission alternatives (i.e., underground, underwater, along freeways and through other existing corridors). Delays and higher costs resulting from continued disputes over transmission systems will impede energy policy implementation.

Greater research and development em-phasis should be placed on expanding use of now-wasted heat discharged from thermal electric generating plants. Development of "district heating" concepts to make use of either warm-water or steam discharges should increase, with demonstration facili-

ties created.

National leadership and greater uniformity in development of alternative electric and natural gas rate structures should be given high priority. Changes in existing rate structures should be made only to insure that consumers are paying the true costs of service and energy provided, and to develop new end-use patterns (i.e., time of day and seasonal use changes) compatible with policy objectives of overall energy system efficiency. Using rate structure changes (lifeline rates and low-income support) to solve social problems creates administration difficulties and equity questions for all rate payers.

Lead times now required for development of all energy supply systems have proven to be, in many instances, far too lengthy. While sufficient time must be provided to insure full study of environmental impacts and all costs and benefits, federal and state decisionmaking processes should be analyzed carefully to insure elimination of unnecessary time spent, Procedural legislation, similar to that passed to specify a timely decision on a natural gas pipeline route from Alaska, should be employed on all major undertak-

Selected residential and small commercial solar energy applications presently are feasible. These should be encouraged by tax incentive or subsidy programs. Longer run solar energy research and developemnt efshould receive increased

GOVERNMENT RE-ORGANIZATION AND ACTION

Improved operating efficiency, planning and decision making at the federal level can accomplished through re-organization of the many federal energy operations. Today, conflicting policies and programs exist, with the net result sometimes being inaction or extensive delay with attendant higher costs for citizens. The current administration for re-organization of energy sponsibilities and creation of a Cabinet-level post should be approved, except for Federal Power Commission and Nuclear Regulatory Commission responsibilities, which should be maintained separately as they relate to need certification and operating standards.

Greater emphasis should be placed on improving information, analysis and decision making systems at both federal and state levels. Legitimate delays and conflicts will occur, particularly when there are major ideological differences present with which Congress must deal. Administration programs should work to anticipate such dif-ferences and to reduce encumbrances of often well-intended yet conflicting or un-

productive regulations and processes.

The structure and function of federal energy activities must reflect the knowledge that all aspects of energy are interrelated. There must be close coordination among various offices and agencies at and between federal and state levels.

REGIONAL DIFFERENCES

Each geographic region of the nation relies upon a unique mix of energy supplies due to economic differences, proximity to resources and markets, and access to imported supplies and climatic conditions. Federal policy must take this uniqueness into con-

The Midwest needs Alaskan oil to replace dwindling Canadian exports. The West Coast also could make efficient use of Alaskan oil. The Northeast, heavily reliant on imported oil and distant from coal fields, may need special consideration to insure stability in the face of import uncertainties. Other regions historically dependent upon hydroelectric facilities for electric power must begin shifting more to coal.

Regional and state offices representing federal energy functions must be more supportive of differing conditions. They should work to stimulate local action in improving efficiency and in developing localized energy

resources and technology.

The wellhead price of Canadian natural gas for consumption in the U.S. has more than doubled during the past two years, This price change should be studied for insight into potential effects of de-regulating U.S. natural gas supplies.

ENERGY USE, ECONOMIC GROWTH, AND LIFESTYLES

National leadership is needed to help the public better understand the relationship between energy use and economic growth. Until recently, it has been assumed the two are tightly linked, requiring energy use growth to keep pace with Gross National Product growth. Studies conducted during the past few years, however, have begun to raise questions about this relationship, suggesting that economic growth can continue at desired levels without similar annual increases in energy demand. A national task force of leading energy and economic experts should be named by the President to address this fundamental question.

More convincing each day is the knowledge that historic energy-use growth rates cannot be sustained. It is obvious that lifestyles will change; and change often is perceived as negative, causing individuals to try to

preserve the status quo.

More efficient use of energy resources can provide new businesses and jobs and other economic and social opportunities. Lifestyle changes need not always be characterized as negative; change does not always involve "sacrifice."

A NATIONAL ENERGY FORUM

Recent public opinion polls show more Americans believe there is an energy crisis. (Harris Survey, January 28, 1977.) There is not similar evidence, however, that the public is willing to accept major energy decisions and change its energy-consumptive

In addition to being better-informed about energy supply and demand problems and alternatives, the public needs to better under stand economic implications of energy shortages, costly imports and continued inefficient consumption. Jobs, income and economic freedom and opportunity are fundamental concerns to which citizens can relate.

The President should consider creating a national energy forum utilizing the nation's electronic and print communications networks. This effort, a public education and discussion forum, should present a balanced and objective dialogue on the present situation and on alternatives in terms of costs. benefits, time constraints and realities, and the need for broader public consensus. The President should establish a broadly-representative group of people to create this

ACTION PROPOSALS FOR CONSIDERATION

The following proposals describe actions which should be considered in development and implementation of national energy policy. Many have been suggested by others; several are considered necessary; and others are offered for consideration. In several instances, federal decisions and action are required; other proposals would require strong federal leadership.

OIL IMPORTS ACTIONS

1. Develop a controllable program to import more crude oil and products during the next five to ten years, while domestic production increases with de-control.

2. Within five to ten years, begin reducing oil imports, particularly those from less-se-

cure sources, as rapidly as possible.

3. Continue expansion of strategic storage to allow for as much as 180 days of secure supplies.

4. Take several other necessary steps to

- support the above actions, including:

 a. Creation of contingency plans to protect against embargo actions and increased competition from other oil-importing na-
- b. Expand coal development nationwide and encourage or require utilities and larger industries to shift to coal.
- c. Accelerate commercialization of other coal conversion technologies (gasification and liquefaction); and increase crude oil production from oil shale.
- d. Re-open offshore areas for exploration. e. Seek greater stability in the Middle East. Positive results would tend to take pressure off expanded strategic storage and accelerated coal development.

DEMAND REDUCTION ACTIONS

- 1. Expand public information programs to clearly communicate energy problems, op-tions, tradeoffs and costs and benefits inherent in policy alternatives.
- 2. Increase R&D funding into a wider range of energy efficiency improvement programs.
- a. Better systems and standards for heating/cooling.
- b. Improved building materials and design criteria.
- c. Alternative transportation systems.
- d. Re-usability of materials now discarded as waste.
- 3. Encourage improved efficiency through price de-regulation.
- 4. Make tax credits available to businesses and industries to improve end-use efficiency.
- a. Consider a 15% tax credit, in addition to the existing 10% investment tax credit, with a first-year writeoff.
- b. Devise special programs to support smaller businesses and industries not now capable of analyzing, financing and implementing efficiency improvements.
- 5. Consider energy-use taxes during the next five years to sharply curb demand. Such taxes, applied heavily at first, should be sustained, not one time, programs. Possible actions could include:
- a. Consider a 20¢ per gallon gasoline tax increase each year for five years. Strong efforts should be undertaken to convince people to drive less whenever possible. (See table at end.)
- b. Consider higher taxes on other fuels; yet recognize that less discretionary use oc-curs in residential and commercial buildings. Therefore, feasibility of this action may be questionable.
- 6. Consider increasing new vehicle costs to influence consumer purchases of more efficient automobiles. Possible actions could include:
 - a. Raise new automobile prices substan-

tially (using license fees or surcharges) to reflect horsepower and vehicle weight com-parisons of all vehicles available during a model year. Consider ways to discourage second vehicles.

b. Create point-of-sale incentive/penalty programs nationwide for implementation by states. This type program could give rebates to purchasers of vehicles with mpg. ratings above average for all models in that model year; and would add to vehicle costs for all models with less-than-average mpg. ratings. A rebate/surcharge of \$100 per mpg. should be considered.

7. Consider subsidy programs as the most direct means to accomplish widespread energy efficiency improvements in residencies and in the public transportation sector. Use revenues collected from higher gasoline taxes to support subsidy programs, particularly transportation. Possible actions could include:

a. Encourage use of state-controlled taxexempt bonds (with federal financial sup-port, if needed) to finance improvements in existing housing stock, about 50% of which will be in use in the year 2000.

b. Expand public transit systems, particularly buses, to increase service to existing routes, along new routes and into new areas.

c. Help fund shared-ride (e.g. vans and car pools) programs to be operated by large groups of employers employers or where workers are concentrated.

8. Employ end-use regulations in situa-tions where quicker shifts in energy use are needed beyond those which market-place could cause. Possible actions conditions could include:

a. Mandatory efficiency standards for all major appliances and all heating/cooling systems. Such equipment should have specific standards for use in terms of building size, climatic conditions and periods of necessary

b. Nationwide labeling of appliance and

other energy-using equipment.
c. Enforceable standards for new and existing residntial and commercial structures within a program which could be implemented by states.

A national law requiring tenant-occupied buildings to conform to national and state guidelines for efficiency. Allow tenants to scrow rental fees if landlerds do not com-

ply within prescribed time periods.

A national law requiring existing residences to meet specific efficiency standards at point-of-sale.

- d. Non-essential energy consumption (i.e., decorative, lawn and advertising lighting, swimming pools, and throw-away goods containers) should be discouraged through higher fuel costs and materials regulations. should be eliminated Ultimately, they wherever possible.
- e. Shift large natural gas and fuel-oil users (possibly with financial assistance through tax incentives) to coal within five to ten years respectively wherever economic conditions and production processes allow.

Establish explicit time and design criteria for shifting large users to coal. These cri-teria could include penalties for failure to act within reasonable time periods. Use of best-available technology should be required for environmental controls.

SUPPLY INCREASE ACTIONS

- 1. Accelerate the current program for phased de-control of domestic crude oil prices. Make a commitment to allow total de-control by 1980 as prescribed by current
- 2. Make Alaskan oil supplies available to particular regions needing it most, the Midwest, for instance.
 - a. More than one oil pipeline from the

Pacific Coast should be built to move Alaskan oil.

b. If necessary, Alaskan oil could be sold to other nations but only within firm and equalized price and volume exchange agree-

3. De-control wellhead prices of "new" natural gas through either of two alternative programs. Under either alternative, wellhead prices for natural gas produced prior to January 1, 1975, should remain controlled as they are at present.

a. Allow, in 1977, wellhead prices of "new" gas to rise to the equivalent-BTU price of

#2 fuel oil.

b. Alternatively, allow "new" prices to rise by about 60% (from \$1.44 currently to \$2.30/mcf.) in 1977, with de-control to the equivalent-BTU price of #2 fuel oil one year later in 1978.

4. Designate the Arctic Gas pipeline to move Alaskan natural gas to the 48 states.

5. Address problems related to increased coal production and consider methods to effect increased coal usage.

a. Give industries tax credits to finance shifts from fuel oil and natural gas wherever possible. Utilities will need rate adjustments to manage similar shifts.

b. Create a strip mining law and accompanying regulations that are acceptable to

Combine the best elements of state programs, wherever possible, with minimum standards now prescribed by the Department of the Interior. Incorporate specific parts of proposed laws which give private surface owners rights of denial and states selective rights to prohibit mining on environmentally-sensitive (mountain tops and alluvial valleys, for example) federal tracts.

Base federal coal leasing and mining schedules on best-available information and technology indicating greatest potential for

successful reclamation.

c. Relax clean air regulations for a fixed period to allow greater industrial and utility coal use.

Restrict relaxation to a five-year period followed by review of environmental impact and potential for upgrading air quality control systems.

d. Increase federal R&D programs to develop coal gasification and liquefaction, including, if necessary, federal loan guarantees to speed commercialization.

Give consideration to tax credits to assist industries in conversion to low-BTU gasifica-

tion systems.

- Accelerate R&D for coal-cleaning systems. 6. Take federal action to insure that "wind-fall" or extraordinary profits from natural gas and crude oil de-regulation are re-invest-ed in increased exploration for new supplies and increased recovery of resources from existing fields.
- 7. Insure orderly electric power system expansion through timely resolution of several critical problems.

a. Provide increased federal technical and financial support to resolution of water ownership and use conflicts at state levels.

b. Increase federal R&D to develop systems to warm water and steam now discharged from thermal electric generating plants. Demonstration facilities should be investigated and selected.

c. Consider utility rate reform to establish rates which would reflect true costs of service and energy and create new end-use pat-

Consider time-of-day and seasonal rates. Consider marginal cost pricing mechanisms.

Analyze effects and appropriateness of declining block rate structures

8. Resolve nuclear power problems through

stronger analysis, better public dialogue and participation in decisions.

- a. Assess breeder reactor development in terms of potential success cost-effectiveness over time as compared with needs to allocate federal funds to other energy programs.
- b. Expand fusion power research as a long-term option.
- Increase efforts to develop alternative electric energy transmission systems
- a. Assess current federal laws prohibiting routing of transmission lines along freeway corridors and through other federally-controlled lands.
- b Increase research on alternative (underground, underwater) transmission systems.
- 10. Recognize growing public resistance to increased energy development and associated large facilities and energy transportation networks.
- a. Find new ways to involve citizens throughout decision making processes.
- b. Fully consider the existence of social limits—strong citizen resistance to environmental and social encroachments.
- 11. Provide financial incentives for residential and small commercial use of already-available and emerging solar energy systems. Increase long-term solar energy research.

GOVERNMENT RE-ORGANIZATION AND ACTION

- 1. Proposed re-organization of federal energy agencies and functions should be accomplished.
- a. All programs having to do with energy development, except explicit regulation (Federal Power Commission and Nuclear Regulatory Commission programs), should be included in a new department. Federal Power Commission and Nuclear Regulatory Commission operations should be closely involved, yet independent of other energy operations.
- b. The new energy department should employ programs similar to those of the Environmental Protection Agency (funding, implementation and overall supervision), particularly as they relate to working through state agencies for program development and monitoring.
- 2. Funds generated by fuel taxes and surcharge programs should flow through the general fund to low and fixed-income citizens most hurt by higher energy prices. These assistance efforts should be kept separate from existing welfare and social security programs.
- 3. Federal and state agencies should develop closer working relationships to effec-

tively implement national energy policy goals. Regional and state-level federal energy offices must be allowed flexibility to work with individual problems and opportunities that arise.

ENERGY USE, ECONOMIC GROWTH AND LIFESTYLE ACTIONS

- 1. A presidentially-appointed task force should undertake study of energy use/ economic growth relationships. This effort should be oriented toward providing input to energy policy decisions.
- 2. Citizens should be given credible eco-nomic and energy-related information and forecasts. Warnings of "sacrifice" or radically-different lifestyles" should be based upon sound information. National leaders should point out positive economic and social aspects of energy and economic changes which can occur through implementation of sound energy policy programs.

A NATIONAL FORUM

The President should develop a national energy forum utilizing the nation's electronic and print communications networks. This forum should be created by a presidentiallyappointed group of broadly-representative people.

¹ There are possible, yet not confirmed, miles-per-gallon averages for new automobiles sold during coming model years, according to Department of Transportation and Energy Research and Development Administration studies.

2 A consideration has been made that it is possible for all drivers, on the average, to reduce, by 300 mi, the distances driven annually, each successive year, by reducing to-work trips and com-

bifling household and other trips. In the Twin Cities, to-work trips average about 5 mi. (Source: Metropolitan Counci). Thus, a worker could take buses or car pools only 2 to 3 days per month the 1st year and reduce miles driven by 25 mi per month.

³ Yearly cost at 1977 prices, miles per gallon and average miles driven.

Mr. PACKWOOD. Mr. President, a very important controversy is now centering around the question of whether the Federal Government should provide medicaid reimbursement for abortions obtained by women on welfare. Congress effort last year to restrict Federal funding for abortions was halted by a court injunction, on the grounds that such a restriction was discriminatory against the poor and thus unconstitutional. Though this case is now pending before the Supreme Court, only the jurisdictional question will be decided this term. In the meantime, as Congress considers appropriations for fiscal year 1978, the question remains whether we should try once again to restrict Federal funds for abortions. At recent hearings conducted by the Appropriations Subcommittee on Labor-HEW, the National Abortion Rights Action League delivered testimony which argued well for continued Federal funding of abortions for welfare women.

Mr. President, I ask unanimous consent that NARAL's testimony of April 4, 1977, be printed in the RECORD.

There being no objection, the testi-mony was ordered to be printed in the RECORD, as follows:

FEDERAL FUNDING OF ABORTIONS TESTIMONY BEFORE SENATE APPROPRIATIONS SUBCOMMITTEE ON LABOR-HEW

Mr. Chairman, I am Carol Werner, Legislative Director of the National Abortion Rights Action League (NARAL), a national membership organization dedicated to the preservation of all women's right to chose safe and legal abortion as an alternative to unwanted pregnancy. We welcome this opportunity to appear before the Senate Appropriations Subcommittee for the Departments of Labor and Health, Education and Welfare and to testify on behalf of the need for continued federal funding of abortions for poor women desiring to terminate unwanted pregnancies.

An underlying premise of the Department of HEW is to promote equalization of access of health services to all of America's people regardless of their economic station in life. Health care has long been recognized as a prerequisite for any lasting general improvement in the standard of living of our people. Title XIX of the Social Security Act, 42 U.S.C. Sec. 1396, recognizes this need in its authorization of funding for the provision of medical care to individuals and families "whose income and resources are insufficient to meet the cost of necessary medical services." With this long-standing commitment in mind, one is bound to ask upon what basis could funding for abortions be denied to individuals dependent solely upon publicly funded medical assistance and for whom abortion is indeed a necessary medical service?

Last year restrictive legislation was enacted into law which would prohibit the use of

any federal funds for abortions except when the life of the woman would be endangered if the fetus were carried to term. An injunction calling this ban unconstitutional and discriminatory prevented the implementa-tion of this prohibition (usually referred to the Hyde amendment). The Supreme Court has twice denied motions requesting a stay of the injunctive order. This matter is now before the Supreme Court but the Congress is faced once again with attemps to ban any federal funding of abortions in the Fiscal Year 1978 Labor-HEW appropriations bill and timewise must necessarily act before any definitive ruling will be forthcoming from the Supreme Court.

What has been abundantly clear, however, the manner in which similar actions by states to prohibit reimbursement for abortion services under Medicaid or similar government programs, have been perceived by lower Federal courts. The courts have consistently (in at last thirteen cases) held that when prenatal/delivery care is available under publicly financed medical programs, that denial of abortion services to the beneficiaries of such programs is in contravention to the equal protection clause of the Fourteenth Amendment to the U.S. Constitution.

Government refusal to fund abortions for those low-income women desiring them indicates that one course of action, i.e., continuation of pregnancy is morally preferable to the government over pregnancy termination. As long as the government is involved in funding for maternity care, it can remain neutral only if access to prenatal care and abortion services are both provided, as pregnancy is a condition requiring medical treatment regardless if the pregnancy is continued or terminated. According to the Supreme Court, it is not the government's business to either prohibit or encourage abortion but to essentially leave the right to limit childbearing where it should be, beyond the ambit of unnecessary governmental intervention. (See Roe v. Wade)

The picture becomes clearer if we ask what the effects are of denying abortion services to low-income women. As the report of the U.S. Commission on Civil Rights (April, 1975) indicates, denial of abortion rights is an abrogation of the civil rights of the poor, among whom racial and ethnic minority women are disproportionately represented. Such action is discriminatory in two fundamental ways: it denies the right of poor women to equal protection under the law if they are not allowed equal access to medical care should they decide to terminate a pregnancy rather than continue it, and (2) denial of funding for abortion services openly discriminates against the indigent in that it prohibits the exercise of their constitutionally guaranteed right to choose legal abortion, making it available only for those who can afford to pay. Such a prohibition against funding of abortion services blatantly discriminates against those who need medical care and protection of their civil rights the most-and who are the least able to fight back. We are then back to the situation where rights are for those who can afford them, if one is poor one's rights are foregone.

The rights of the poor cannot be overlooked in this most basic and private domain—the right to make a decision about one's own childbearing. This is an individual, personal decision about which no one has the knowledge, nor should even want the right, to make a decision for anyone else. Clearly, none of us would want anyone making the decision for us as to whether or when a child should be borne, how then can we make that decision for others when the only difference is that they are dependent upon federally-assisted programs for all their medical care?

The public health benefits of legalized abortion speak for themselves. The number of abortion-related deaths has dropped dramatically since the legalization of abortion in 1973, making abortion in the first trimester of pregnancy more than eight times safer than childbirth. Infant mortality rates have also decreased significantly. We also know that abortions will occur regardless of their legal status. Women faced with unwanted pregnancies have found means to terminate them throughout history (the first recorded abortion being in 2000 B.C.). Christopher Tietz of the Population Council has ascertained that 70 percent of all women having legal abortions would have had abortions even if it were an illegal procedure. Since approximately one-third of all women obtaining abortions (250,000-300,000) are recipients of Medicaid assistance, the ramifications of denying funding—essentially making abortion illegal for these women—are clear in terms of health risks to them. According to unpublished data from the Center for Disease Control, Atlanta, Georgia, statistical projections of what would happen to the 250,000 (approx.) women who would be denied Medicaid assistance for abortion under a "Hyde amendment" are as follows:

(1) If all had legal abortions there would be 8.6 deaths;

(2) If all had legal abortions but were forced into a two-week delay in an attempt to find funding, etc., there would be 13.6 deaths:

(3) If 70% had illegal abortions (as indicated by Tietze's data) and 30% continued their pregnancies, there would be 84 deaths;

(4) If all had illegal abortions, there would be 100 deaths;

(5) If all continued their pregnancies, there would be 44 deaths.

An impact statement issued in 1974 by Dr. Louis Hellman, formerly of DHEW, when a similar restriction was under consideration by the Congress, estimated there would be 125–250 deaths resulting from self-induced abortions if they could not be obtained legally. In addition, DHEW estimated that up to 25,000 cases involving serious medical complications from self-induced abortions would result. This represents a tremendous risk in terms of health costs to poor women. To knowingly set aside this risk by enacting a ban of any federally funded abortions is cruel and unthinkable.

In terms of fiscal arguments as well, it is obvious that expense to the taxpayer is much less if indigent women requesting abortions are allowed them as apposed to being forced to continue an unwanted pregnancy and bearing an unwanted child. Again, DHEW itself estimates the cost of federal funding of abortions at \$45–50 million annually, whereas the first-year cost after birth for medical care and public assistance would run between \$450–565 million. For each pregnancy among Medicaid-eligible women that is brought to term, DHEW estimates the first-year costs to be \$2200 for maternity and pediatric care and public assistance.

The 25,000 cases of medical complications (referred to on the previous page) resulting from illegal procedures were estimated by Dr. Hellman over two years ago to cost in the range from \$375 to \$2000 per patient. Medical costs have continued to climb in the last two years as we all are very much aware. These figures do not take into consideration any future cost relative to AFDC or other welfare payments or any societal burdens resulting from extra strain on public services or complications often linked with the unwanted child in dealing with society. We cannot believe that the majority of Americans would knowingly inflict this kind of cost upon either indigent women or upon themselves. There is no way in which a fiscal conservative could justify a ban of federal funding on the basis of cost to the taxpayer.

The whole question of federal funding for abortions has arisen because there are people who feel abortion is wrong—period. We now often hear about "alternatives to abortion" and reducing the need for abortion. We would posit that the best and certainly the most logical manner in which to reduce the need for abortions is to discover the cause of abortion need and then attempt to that cause. Certainly any historian can illustrate that to attempt treatment of a symptom rather than dealing with the root cause of the issue itself will only provoke greater societal unrest and friction and will not in any way alleviate the problem. The abortion issue is a case in point. Abortions occur because women are faced with unwanted pregnancies. They will not cease to occur through application of a band-aid treatment, i.e., attempting to prohibit women from obtaining them. The only way in which to lessen the need for abortion services is to find ways of preventing unwanted pregnancies. This can come only from increased and better sex education programs, much more contraceptive research, and provision of family planning services to all who want and need them. Needless to say, we have a long way to go in all of these areas.

NARAL commends the Carter administration and the past Congresses for their commitment and initiatives in these areas, but unfortunately the new budget requests will not go far in providing substantive gains in the areas listed above. It is particularly alarming to us that the Administration could so emphatically oppose abortion services for the indigent in view of the principles of basic human rights involved and in view of the great unmet needs this country faces in pregnancy prevention for the middle class and rich, but most importantly for the poor who historically have always suffered the most from being unable to control their fertility.

There is no foolproof and safe method of contraception presently available. Everyone is familiar with the studies showing serious health risks related to usage of the "pill" and intra-uterine devices. We need to encourage the development of contraception that is simple, effective (failsafe), and inexpensive. A table is attached for your information detailing how acute the unmet need for family planning services still remains in the states represented by the members of this Subcommittee. A great amount of effort is required simply to proliferate the available family planning information to those in need of it. Since teenagers account for approximately one-third of all abortions formed, it is imperative that sex education contraception be made increasingly available to them. Clearly, non-access has not worked, teenagers are instead becoming

sexually active at ever younger ages.

Even if the appropriations request were greatly increased to facilitate the meeting of all these needs, what about the people in the meantime? What about those women who simply do not have access to family planning services yet; what about the women who have contraceptive failure; what about those women who become pregnant simply because of lack of information; what about those women who cannot for health reasons use the most effective methods of birth control now available; what about victims of rape and incest; what about women who find they are carrying a genetically defective fetus; and what about those women who are suffering from serious diseases at the same time they are pregant? The need for abortion will probably never be totally eradicated-and certainly not within this year! That is why it is so disconcerting to hear Secretary Califano speak of the compassion the government must feel for the poor and his belief that DHEW is the "People's De-partment" but yet be so ready to cast away the rights and the needs of the poor in advocating denial of their access to abortion services. It is imperative that the human rights of the poor in this country be remembered as well as the human rights of those in other countries.

The final point to be made is that those individuals seeking to ban federal funding of abortions are doing so because of their own profound moral/religious convictions against abortion. They are not willing to tolerate the differing moral viewpoints of others in our society, let alone recognize the real-life situation with regard to abortion and unwanted pregnancies as outlined above. Indeed, it is ironic that the majority of those who are most anxious to prohibit abortion are strongly opposed to contraception and sex education and appear to dismiss quite lightly the constitutional rights of viduals to make their own decisions about childbearing. This is especially interesting since no one is being compelled to do anvthing against ones own will. This is a serious challenge to the First Amendment rights of all Americans which guarantees freedom of (as well as from) religion and which makes separation of church and state a fundamental tenet of our pluralistic, democratic society. In such a society it is expected that never will everyone agree: Moreover, no religious body has the right to impose its own conception of morality upon the society through secular law. For all those who are morally opposed to forcing people to bear unwanted children and having to pay the resultant financial and societal cost. Probably everyone resents some ways in which

the government has expended public funds. In such instances, decisions must be made upon the criteria of what is the fairest to those involved and the closest akin to the principles embodied in our Constitution. With regard to the question before us, the answer is clear—that federal funding of

abortion services for the indigent should continue.

NARAL strongly urges the Subcommittee to continue federal funding of abortions for low-income women and to reject any language seeking to prohibit or limit access of such services to the poor.

SUMMARY OF BUDGET REQUEST

The National Abortion Rights Action League is testifying on behalf of continued federal funding of abortions for low-income women. We are requesting the Labor-HEW Appropriations Subcommittee to ensure continued funding through defeat of any language, including that of the Hyde Amendment to last year's Labor-HEW Appropriations bill for 1977, which would restrict the availability of legal abortion services to the indigent.

NARAL believes that poor women should have equal access to abortion services as do their wealthier counterparts in society and should be allowed to fully exercise their constitutionally guaranteed right to choose safe, legal abortion or to choose to continue their pregnancy. Under a Hyde Amendment, pregnant low-income women would be compelled to bear unwanted children or resort to selfinduced or illegal abortion procedures which are severely damaging in terms of risks to the woman's life and health. The public health benefits of legal abortion have been dramatic in terms of reduced death and medical complications statistics. Certainly the taxpayer cost is much less if poor women are allowed the right to terminate unwanted pregnan-

Lower federal courts have consistently found that denial by states of abortion services to the poor is in contravention to the equal protection clause of the Constitution when the state will fund only prenatal and delivery care. The government can remain neutral only by allowing poor women both options—to either continue or terminate a pregnancy. Such restrictions are also discriminatory in that the right to choose is allowed only to those who can afford it; the civil rights of the poor are ignored.

We urge the Congress to increase the funding levels for the proliferation of family planning services, contraceptive research, and sex education programs. This is the only means through which to help reduce the need for abortion. A Table has been appended to outline the unmet need for family planning services to low-income women in the states represented by the Members of this Subcommittee.

ENERGY

Mr. KENNEDY. Mr. President, I want to call the attention of my colleagues to a thoughtful and provocative speech on the Nation's energy problems by the distinguished Senator from Louisiana, Bennett Johnston.

Speaking to the 15th anniversary dinner of the New England Fuel Institute, which also was honoring its longtime executive vice president, Charlie Burkhardt, Senator Johnston offered a compelling call for unified national action in meeting our Nation's energy crisis.

The distinguished chairman of the Senate Energy Subcommittee will bear major responsibility for considering the President's new energy package. I believe that no better forum could be sought for helping to develop a plan that will be fair to all regions and to all citizens.

He has listened with fairness and objectivity already to two special issues that affected the northeast—the question of regional strategic reserves and the urgent midwinter need for entitlements—and he has acted out of his recognition of the facts in each case.

I may differ with him, and he with me, on specific policies. But I admire greatly his determination to pursue a national solution to the serious energy problems that we face in a way that is equitable to all.

I ask unanimous consent that his speech be printed in the Record.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SENATOR J. BENNETT JOHNSTON SPEECH TO THE NEW ENGLAND FUEL INSTITUTE

On January 31, 1977, at the height of our winter energy crisis, the Sixth Circuit Court of Appeals stopped the construction of a TVA dam designed to increase electricity production in order to protect a three-inch minnow known as the "snail darter". In case you have never heard of the "snail darter". it is a brownish little fish which lives in 16 miles of the Little Tennessee River, numbers at most 15,000, feeds on snails and has no known use-not even as fish bait. The snail darter was first discovered in 1973-almost six years after the Tellico Dam project was begun—and was not placed on the Endangered Species List of the Interior Department until 1975-almost ten years after Congress first appropriated money for the project. The \$116 million Tellico Dam project, on the other hand, would provide electricity for 20,000 homes and was 90% complete when the Court issued its injunction. By the way, the Court was not even sure that completion of the TVA project would harm the snail darter, stating rather that the project "may destroy or modify the critical habitat of the snail darter"

I don't mean to blame this lowly fish for all our energy problems, nor do I mean to demean or denigrate the environmental movement in this land which has done so much to prevent the degradation of our land and water. But this is a prime example of misplaced priorities, lack of direction and failure to respond intelligently to the energy problem as it has developed. The Arab Embargo in 1973 showed us that the United States had an energy supply problem and was far too dependent on foreign sources for our crude oil. The "winter crisis of 1977" reminded us that not only do we still have an energy supply problem, but also that our supply problem has a domestic aspect as well—insufficient domestic supplies of natural gas and inadequate domestic fuel oil refining and storing capacity.

Call it a crisis or a shortage or whatever you will, our energy problem is real, acute and the fact is that we are doing nothing to solve it. In place of constructive, affirmative action, we have substituted three different attitudes or states of mind which have prevented any real solution.

The first is regionalism. Each region has adopted a "seige mentality". Each concerns itself only with its own misplaced fears and incorrectly identified interests. The West Coast believes it has a glut of oil. It resists receiving Alaskan oil by tanker and opposes a pipeline across its state to deliver that oil to other regions of the country. The West is concerned with what it regards as the rape of its lands by strip mining or the loss of its water to coal slurry pipelines. My region believes it has done its share for energy production and talks of cutting back on production in order to retain oil and natural gas for our own use. There was even a timenow past-when my region opposed the construction of a refinery in New England in order to protect our own domestic production. I might add that your group took the initiative in fighting for that refinery long before others in New England saw the dangers of heavy reliance on foreign imports. But the East, while wringing its hands over the dangers of oil tanker spills-as well it should in light of the recent Argo Merchant disaster-opposes Outer Continental Shelf drilling, a superport or additional refinery siting. A recent Washington Post editorial identified the East Coast attitude as the "Atlantic state of mind". To quote the Post:

"It is an attitude that vehemently opposes offshore drilling, or the construction of new refineries, or the development of oil ports. But it is also an attitude that bitterly resents rising fuel costs and utility bills. This attitude concedes that the disruptive and sometimes dirty process of producing and refining oil is necessary, but wants it to take place somewhere else. At the same time, it does not see why the northeastern states should pay any more for their fuel than, say, the southwest."

The second attitude is the scapegoat syndrome. Indeed, recently 65% of those polled by Lou Harris for ABC News identified the behavior of big oil companies as "very much to blame" for our energy crisis. This attitude delights to phrases like "obscene profits" and 'conspiring with the Arab oil producing nations." I might add that you, the marketers of fuel oil, are often accused of being coconspirators with big oil when prices in-crease. The current manifestations of this attitude are the delusion that there is plenty of oil and gas squirreled away in our country-all we have to do is punish big oil severely for withholding these reserves. Somehow, the logic goes, if we just take away the rest of their price incentives, the rest of their depletion allowance and divest them vertically, horizontally, and if possible, diagonally, then all will be well and oil and gas will flow abundantly into the marketplace at a low price.

The third attitude is the "snall darter mentality"—an enshrining of environmental concerns above everything and a total failure to balance these legitimate concerns with the equally legitimate concerns of energy sufficiency, jobs and the economy. In short, the mentality is characterized by a failure to recognize that the quality of life consists of more than just endangered species and the pristine purity of our environment. This attitude manifests itself in hundreds of ways—but most obviously by your region's failure to build refineries, superports or allow drilling on your Atlantic OCS.

Well, what has been the result, of this triple threat of regionalism, scapegoatism and the snail darter mentality? We've gone from bad to worse energy-wise and we're getting there faster all the time.

At the time of the 1973 Arab Embargo, we imported about 37% of our crude oil—now we import about 50%. Prior to the Embargo the Arab OPEC nations accounted for 22% of our oil imports. Now, Arab OPEC nations account for 38% of our imports. In 1973, we produced about 9.2 million barrels per day of crude oil domestically—now we produce only a little more than 8 million barrels per day. In 1973, we produced 22.6 trillion cubic feet of natural gas—last year we produced less than 20 trillion cubic feet. During the first 8 months of 1976, the amount of natural gas dedicated to the interstate market declined by 5% from 1975.

We told ourselves that our 600 year supply of coal would be our salvation. But in the three and a half years since the embargo, we've increased our coal production by a total of only 12%—only 4% per year. But a recent FEA study states that the United States must almost double its coal production in the next eight years from the present 665 million tons per year to over 1 billion tons. The percentage of our electrical generating capacity provided by nuclear energy has increased only marginally since 1973—from about 4.5% to 9% in 1976.

On the demand side, the outlook is equally bleak. The Federal Energy Administration estimates that our energy needs will continue to increase each year until 1985 at an annual rate of 2.5% per year—down slightly from the 3.5% per year rate of growth we enjoyed prior to the 1973 embargo. At that rate, our energy consumption will be 25% greater in 1985 than it was last year. But, in light of our increase in consumption last year of over 3%, we may be consuming even more energy in 1985 than previously projected. We've made some headway in energy conservation. We have some great and important plans for energy conservation which will be studied by my Subcommittee on Energy Conservation and Regulation. But the fact is that conservation, at least as presently envisioned, can not be expected to reduce future demand, but only to decrease

the annual rate of increase in energy demand.

But stating the problem is easy I'm sure many of you feel, in fact, that the energy problem is not a particularly thorny problem for an oil producing state senator. But the energy problems which face us in Louisiana are the same problems which face you in New England-high prices and uncertainty of supply. So, I do not recommend that we turn a deaf ear to legitimate problems of each region; nor that we turn the nation over to Exxon; nor that we abandon our concern over the dangers of monopoly or price gouging; nor that we junk the environmental ethic which we have just recently acquired and which is so important to each of us But in the last decade, Congress has adopted a Clean Air Act, a Federal Water Pollution Control Act, a Coastal Zone Management Act, the National Environmental Policy Act, the Noise Pollution and Abatement Act of 1970, the Oil Pollution Act, the Marine Protection, Research and Sanctuaries Act of 1972, the Safe Drinking Water Act, and the Energy Supply and Environmental Coordination Act of 1974. Congress is now considering a strip mining bill, amendments to the Clean Air Act, and amendments to the Outer Continental Shelf Lands Act. Regardless of the merits of these bills, they have an impact on our ability to produce energy-and that impact is sometimes reflected in lower production, inordinate delays and increased costs to the consumer. So I propose that we begin today to take a hard look at our energy needs and our options for obtaining that energy; that we analyze each alternative energy source for its relevant capital and other economic costs, its environmental, national security and balance-of-trade implications as well as the other relative advantages and disadvantages. In sum we must put together a plan that will produce energy and facilitate its use.

I believe that when New England analyzes its energy needs and energy options—balancing the various trade-offs as I have discussed—then New England will be guided by enlightened regionalism—an attitude, I believe, which would encourage construction of superport drilling on the Atlantic OCS, and increased domestic refinery capacity.

The East Coast supply-price picture is even more dismal than that of the nation as a whole. Although 25% of our nation's population is located on the East Coast, East Coast refineries can provide only about one-third of your petroleum product requirements. Over ninety percent of the feedstock for those refineries is crude oil imported from foreign countries. For most of the remaining two-thirds of your petroleum product needs, you must rely on imports from foreign refiners who, in turn, must rely totally on for-eign oil producers for their feedstocks. I might add that recent FEA regulations have almost banned Gulf Coast refiners from your market. In short, your region is the most vulnerable to pricing by foreign nations and you should not be surprised that your fuel costs are among the highest in the nation.

A superport will help you reduce the cost of your imported crude oil supply and protect you from some of the environmental risks accompanying the hundreds of tankers which visit your shores each year. There can be little question that large, modern supertankers, off-loading their cargo into a pipeline many miles offshore pose less danger to your beaches than the Argo Merchant's of this world.

New refineries built in New England to produce mainly distillates and residual fuel oil will lessen your vulnerability to foreign price increases and product supply interruptions. They will be more help to you than regional strategic petroleum reserves, although you should know that Senator Ken-

nedy, Senator Durkin and I have been working to convince FEA to locate a regional heavy fuel oil storage supply in New England as part of the Strategic Petroleum Reserve program. Of course, you all know what happened this winter. Supplies of home heating fuel ran dangerously low in your region and the only recourse was to import expensive distillates from foreign refineries in unprecedented quantities-an average of 700,000 barrels per day in February. New England asked FEA for, and received, a special entitlement subsidy this winter to lessen the impact of the higher priced fuel oil imports on the New England consumer. Of course, the consumers in the rest of the nation paid for that subsidy by paying a little more for the fuel they purchased. You receive a subsidy on your residual fuel oil, again paid for consumers in the rest of the nation. While there may be some equity in this subsidy, the effect of the FEA product entitle-ment program on residual fuel has been to drive out of business the largest independent. grass-roots refinery to begin operation in the last decade.

Although a portion of these subsidies have flowed through to the consumer, many of the subsidy has been retained by foreign refiners who are beyond the reach of the FEA. To date, the nation has been willing to subsidize New England's fuel costs. You have been willing to accept that subsidy knowing, nonetheless, that each new subsidy program is a further disincentive to new domestic refining capacity—thus further cementing your reliance on foreign refiners. I believe your best, most enlightened interest lies in encouraging the establishment of new refining capacity in your region and weaning yourselves off of the Caribbean refiners.

But most importantly, you need to encourage an aggressive drilling program on the Atlantic Coast Outer Continental Shelf. A prime example of the "Snail darter mentality" which I have not previously mentioned concerns the frenetic enthusiasm with which some in your region greeted the court decision cancelling the recent Atlantic OCS lease sale. Approximately, that decision, like the snall darter decision, was rendered at the height of our recent winter energy crisis. According to the Geological Survey, there is thought to be about trillion cubic feet of undiscovered and recoverable natural gas on the Atlantic OCS and as much as 4 billion barrels of undiscovered but recoverable crude oil. Of course, these are only estimates. There may be considerably more. There may be considerably less. There may be none. Although no one will know for sure until there is a considerable amount of drilling, someone believes in the area—because the oil companies bid \$1.4 billion for the drilling rights. Whatever is there, it will some day be only a pipeline away, if your region will only encourage its development. Surely pipelines and OCS drilling are considerably safer environmentally than the transportation of oil to your shores tankers. A recent study by the Council on Environmental Quality reveals that five times as much oil has been spilled into our oceans from tankers than from OCS drilling; ten times as much from all ships as from OCS drilling; and six times as much oil has entered our oceans from the crankcases of automobiles as from OCS drilling. In fact, thirty percent of the oil in our oceans today has come from the crankcases of our automobiles. Forty years of drilling 21,000 wells on offshore Louisiana have taught us there is little danger of lasting adverse environmental impact from OCS drilling. Recently, the Environmental Protection Agency revealed that, although research is continuing, there is no evidence of lasting environmental harm from an cil spill. In fact, according to Britain's Plymouth Laboratory, the detergent used to clean

up after the Torrey Canyon disaster in 1967 caused more harm to the environment than did the oil. In short, I believe it is not only in your economic interest to encourage OCS drilling, but in your environmental interest as well.

You might also be interested to know that your state may now participate with the federal government in some of the revenues from the development of the OCS. Last year Congress created a Coastal Energy Impact assistance program with \$1.2 billion in loans and grants to assist coastal states mainly in developing the facilities and services to support the OCS development. I do not believe the grant portion of the program is either big enough or leaves enough discretion with the states. I will soon offer an amendment to remedy these deficiencies and I hope to have the support of your Senators and Congressmen.

In summary, we've all got to rid ourselves of "seige mentality" regionalism in favor of an enlightened regionalism which works to the national good. We all must—and I particularly include politicians in this—rid ourselves of scapegoatism which divides us and diverts us from the real energy issue. And as for the snail darter mentality, we can no longer afford the luxury of such a simplistic approach to difficult and delicate problems. We must resolve now, to make enlightened decisions which more accurately balance the interests of preserving our environment and providing energy for our people.

THE F-18

Mr. GOLDWATER. Mr. President, almost since the day the F-18 program was first announced, I have expressed my doubts that the program would ever get off the ground. Lately, there have been persistent reports indicating Navy is encountering severe funding problems for its ongoing aircraft procurement programs for the next 5 years. One of the possible solutions being reported is that the F-18 program would be canceled.

Mr. President, I hope the Department of Defense and the Navy will make an early decision on the F-18 program because currently pending before the Congress is a request of \$626.6 million for continued development of the F-18 and \$29.3 million for advanced procurement. Now if the decision is about to be made that the Navy is not going to proceed with this program, it would be very helpful for the Congress to know, since there are many other programs, some of which were cut by the incoming administration, that could use these funds.

Mr. President, I ask unanimous consent that two articles from Aviation Week and Space Technology, which address this issue in detail, be printed in the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Aviation Week and Space Technology, Apr. 4, 1977]

NAVY WEIGHS F-18 PROGRAM DELAY

Washington.—Navy is considering plans to delay the McDonnell Douglas/Northrop F-18 air combat fighter program by at least a year beginning with the Fiscal 1979 budget submission and also wants to halt its procurement of the Lockheed P-3C antisubmarine warfare aircraft.

The plan is aimed at aiding the service in overcoming serious funding shortages that begin with the Fiscal 1979 request (AW&ST

Mar. 28, p. 14). The Navy had been committed to 24 squadrons of the P-3C at a procurement rate of 14 aircraft per year through the five-year defense plan.

The aircraft already has been to Australia with 10 Orions going to that nation, and 18 CP-140s, a variant of the P-3C, sold to Canada. These are government-to-government agreements, and the impact of the Navy's plan to stop procurement of the P-3C is being assessed.

The Navy already has requested long-lead funding in Fiscal 1978 and deliveries of the P-3C include 11 aircraft from Fiscal 1977 funding, and 12 scheduled for Fiscal 1978 funding. The production rate would go to 14 aircraft per year in Fiscal 1979 if the order is not canceled.

The first Australian aircraft will be delivered in December, 1977, with nine scheduled for delivery in Fiscal 1978. Canada will get its first aircraft in 1980.

Industry officials believe it will not save the service any money to cancel or delay the F-18 fighter program. Delaying the program by a year will only increase costs in the long run by adding to the unit cost. Industry officials believe it will cost the Navy about \$12.5 billion to procure additional F-14As and Vought A-7Es if the F-18 program is scrapped. That figure includes an estimate of \$3.3-3.7 billion to develop a new engine for the F-14B, and \$2.3 billion for F-14A modifications already planned, including engine improvements.

[From the Aviation Week & Space Technology, Mar. 28, 1977]

> HARD CHOICES CONFRONTING NAVY (By Clarence A. Robinson, Jr.)

Washington.—Navy is examining several drastic alternatives to lessen the impact of funding constraints on fleet modernization, readiness and aircraft procurement programs.

Among the alternatives are:

Cancellation of one of three major aircraft procurement programs: the Northrop/Mc-Donnell Douglas F-18 air combat fighter, the Grumman F-14A air-superiority fighter or the Lockheed P-3C anti-submarine warfare aircraft.

Reduction in form levels.

Stretchout in a number of procurement programs. This would ease the funding constraints on a near-term basis but cost the Navy more in procurement funds over the long run with resulting high unit costs for the weapons involved.

A number of senior Navy officials are convinced that reduction in force levels and stretching present procurement programs are ineffectual and piecemeal approaches to the problem the Navy faces of trying to support force levels adequately for 12 aircraft carriers through the five-year defense plan.

In providing funding for aviation needs, the Navy expects a shortage of approximately \$700 million in Fiscal 1979, more than \$800 million in Fiscal 1980 and about \$1 billion in Fiscal 1981.

There is just not enough money available during the five-year defense plan to continue all of the Navy's aircraft and missile procurement programs while providing adequate operating and maintenance funding and to continue necessary research and development work, according to Navy officials. The Navy expects to come up about \$5.7 billion short over the next five years.

The Navy is seeking \$3.7 billion in Fiscal 1978 for aircraft procurement. In the Fiscal 1979 authorization request, which was submitted with the Fiscal 1978 budget to Congress, the Navy asked for \$4.3 billion. This figure was submitted under the Ford Administration and has not yet been cut by the Defense Dept. under orders from the Carter Administration. Of that amount a total of

\$2.8 billion has been earmarked for aircraft procurement—\$654 million for Grumman A-6A/EA-6Bs/E-2Cs, \$948 million for F-18 procurement and development and \$1.2 billion for 60 F-14s.

Internally, the service has placed a "fence" around the funding available for aviation programs. The fiscal fence limits funding levels to budget constraints provided by the Administration.

Compounding the service's fiscal problems is congressional pressure for the Navy to fund competitive development of a new engine for the F-14B and to formulate a procurement plan for the engine. Navy officials believe that it will cost the service \$50-60 million in Fiscal 1979 for engine development alone.

The total cost for developing a new engine with three manufacturers competing is estimated at \$400-\$500 million. Another \$2.3 billion will be needed for engine procurement, which is based on beginning the F-14 re-engining effort in 1984.

At the same time, the Navy is forced to continue purchasing kits to improve the Pratt & Whitney TF30 engines in the F-14As in the fleet. Kits to improve the TF30 cost the service about \$800,000 each and include redesign of the first stage fan blade and increased thickness in containment cases around the front and rear stages.

Last year the Navy reprogrammed money to pay for the kits and is seeking to reprogram \$66.9 million from the canceled Condor missile program this year for that purpose.

Engine improvements begin on the production line with the 235th F-14, and the service will retrofit the earlier aircraft with the kits.

In Fiscal 1977, Congress gave the Navy \$15 million to initiate a competitive hardware demonstration of a new engine for the F-14 fighter and expected the service to include a funding request in Fiscal 1978 to continue the development. Because the money from Congress came after the formulation of the program objective memorandum by the Navy, a funding request could not be included in the Fiscal 1978 budget.

The Navy plans to ask the Congress to allow it to spread the \$15 million provided for development of a new F-14 engine over both Fiscal 1977 and Fiscal 1978 spending periods, and then the Navy would pick up the funding for the new engine with its request in Fiscal 1979.

The Navy plans to develop the new F-14B engine on a schedule that will bring it into the inventory in 1984, when the first F-14s are planned to undergo modernization as part of a service life extension program to add another 4,200 operating hours to the aircraft in the fleet. This equates to approximately another 12 years of service life.

The Navy needs the new engine for an in-

The Navy needs the new engine for an increase in power for the fighter. The F-14A initially was approved in Congress with the understanding that the fighter would be reengined to the F-14B starting with the 135th aircraft to come off the Grumman line.

Congress is pressing the Defense Dept. for the Navy plan to develop the new engine and Congress has asked whether or not it will be required to finance the program again in Fiscal 1978 if it chooses.

The competitive engine development program as now envisioned would include at least three manufacturers. They are Pratt & Whitney with the F401 variant, General Electric with its F101X and Allison with its 912-B32.

Navy officials are entering a reduced spending profile at a time when the service has too many procurement programs, and senior officials are eyeing the biggest production programs for an area of immediate cuts to ease the pressure of an over-extended position.

Aircraft procurement costs are continuing to climb, and this is not related only to inflation. The increased costs are in part caused by advances in technology. Lightweight composite materials is one area where costs are increasing. There is now an overall increase of 16-18% per year throughout industry in aircraft components. The increases in parts costs impact on fleet readiness through aircraft availability rates, an area where the Navy already has been under-

As costs increase, it means less fuel availability for flight hours and less maintenance man hours at a time when the Navy is making a concerted effort to raise its aircraft availability rate and improve fleet readiness across the board.

In Fiscal 1979, the Administration is tightening the Defense Dept. budget request, which will lower the Navy's ceiling. mandates a significant adjustment to the Navy funding request for aviation and means an adjustment to at least one or more of the production lines.

Reductions are extremely difficult for Navy aviation because of the way the service must organize for carrier operations. Fighters, attack, early warning aircraft and anti-sub-marine warfare aircraft must all operate from a single platform with resupply lines to the carrier. This dictates that the service procure small buys of aircraft each year at relatively high costs to make up composite wings for the carriers.

Naval aviation officials believe that the best approach to cutting costs is to simply eliminate one of its production programs for aircraft. But they are aware it is difficult to gain approval for that position within the Pentagon and the Congress.

By reducing the number of aircraft procurement programs by one, delaying fleet modernization and stressing a balance between research and development funding and operations and maintenance costs, Navy officials are convinced the service can greatly improve its combat effectiveness.

The low part of the high/low aircraft mixthe F-18 strike fighter-is being questioned as a program that the Navy may not be able to afford, particularly since the F-14A at the high end of the mix is demonstrating increased reliability in Block 90 aircraft

The F-14As taking part in the joint Navy USAF combat evaluation program at Nellis AFB, Nev., are all Block 90 aircraft, and they are achieving an overall 85% availability rate. Block 90 aircraft changes include installation of maneuvering flaps/slats, re-placement of the central air data computer and a new ultra-high-frequency radio.

The allowance list of parts for the F-14A has been updated for the program at Nellis where often four sorties a day are flown and 85% of the parts are stocked at the base. It is only rarely that a part is not in the bin when it is required. The Navy is applying the same maintenance and supply procedures for the F-14A incrementally to other squadrons in the fleet.

F-14A squadrons on the USS John F. Kennedy operating at sea in the Sixth Fleet are achieving a 62 percent aircraft availability rate, close to the 70 percent chief of naval operations standard for the service.

If the Navy decides to, and is able to convince the Pentagon and Congress that it would be best for the service to halt the F-18 fighter program, it would save about \$15 billion through Fiscal 1988. Current F-18 procurement plans through the five-year defense plan include:

Fiscal 1978-research and development

Fiscal 1979-nine aircraft at a cost of \$517 million.

Fiscal 1980-50 aircraft for \$875 million. Fiscal 1981—72 aircraft for \$1.3 billion. Fiscal 1982—120 aircraft at \$1.6 billion. Not only has the Navy convinced the Pen-

tagon that the F-14A procurement should be

expedited to reduce costs, it also has managed to persuade some senior Defense Dept. officials that the F-18 does not have a real capability for the fleet air defense mission. The fighter was not designed for this role, one that Navy officials consider critical to the fleet's survivability. On the other hand, they argue, the F-14A has proved to be one of the hottest fighters in the world in the aerial combat maneuvering tests now in progress at Nellis AFB.

To reduce the costs of the F-14 by expediting the production schedule, the Navy will get 521 of the fighters in lieu of a planned The production schedule now includes:

Thirty-six in Fiscal 1977 which will be delivered next year.

Forty-four in Fiscal 1978 at a cost of \$940.7 million.

Sixty in Fiscal 1979 for \$1.2 billion. Sixty in Fiscal 1980 for \$1.2 billion.

Forty-two in Fiscal 1981 for \$795.3 million. Navy officials estimate that by increasing the production rate of the F-14 from 13 per year to as high as 60 yer year to complete the purchase of pipeline, spares and attrition aircraft the service will save \$2 million per aircraft. The schedule for deliveries has been compressed from 1988 to final deliveries in 1981

Because of the performance at sea of the F-14As, the Navy is not anxious to halt the procurement of the fighter at 403 and not provide necessary spares aircraft. Neither is the Navy keen about halting the P-3C production line. The service is committed to achieving an all P-3C surveillance inventory.

The production rate of that aircraft is planned at 14 per year. This low quantity buy makes the aircraft costly, with procurement running through the five-year defense plan.

The Navy had planned to operate with 18 F-14A squadrons and to procure six F-18 squadrons and 24 squadrons of the A-18, the attack version of the air combat fighter. The Marine Corps plans to procure 12 F-18 squadrons and that is one of the major problems facing the Navy at the moment. If the Navy halts the F-18 program, the question

arises of providing a fighter for the Marines. The F-14 could be made available for the Marine Corps, but that service now favors the F-18 for case of maintenance and reliability designed into the aircraft. The Marines can continue to operate with the slatted Mc-Donnell Douglas F-4 fighter, or a supersonic version of the McDonnell Douglas AV-8B Harrier might become available as a fighter

Without the A-18, if the F-18 is not procured, the Navy would procure additional Vought A-7s and look at the possibility of re-engining the attack aircraft. It is possible that the Navy may decide to procure the AV-8B Harrier along with the Marines and thus achieve the benefits of commonality in the attack aircraft. The Navy also would have the advantage of operating with an interim vertical/short takeoff and landing aircraft at sea as it moves toward an all V/ STOL inventory in the late 1990s.

Naval Air Systems Command is now conducting a study on the feasibility of an Advanced Harrier procurement for the Navy attack mission. The study includes a comparison with the AV-8B and the A-18.

The A-7 line is facing shutdown, and the Navy is trying to keep that production capability open. The service has been hoping that the Pakistani request for 100 A-7s would keep the line open until a decision on the A-18 could be made, but that foreign procurement is now being held up in the State Dept.

Many Naval officials believe the accuracy of the A-7 weapons delivery system-about 6 mils-is about as good as can be achieved and the A-18 would only be able to duplicate that accuracy.

The big advantage in the A-18 over the A-7 would be aircraft survivability, maintain-ability and reliability. The survivability would be in the form of improved aerody-namic performance and an increase in power with the two General Electric F404 engines.

When all the evidence has been weighed Navy officials the course of action likely be to scrub the F-18 fighter/A-18 attack aircraft program "as the cleanest course of action." But the officials are keenly aware that they face an uphill fight in the Defense Dept. and in Congress. Because of this, the other two alternatives also are being closely

Nevertheless, the F-18 procurement is the only one of three aircraft procurement programs having any real financial impact on Navy spending that would make apparent sense for the service to cancel. The Navy thus finds itself in a bind.

Naval Air Systems Command also is studya letter from VX-5, the China Lake, Calif.-based test and evaluation squadron, which concludes that the A-18 will be less capable than the A-7E in most attack mission areas.

The total planned procurement of 800 F-18s includes a Navy buy of 310 attack versions, and the total program cost of \$12.8 billion includes inflation costs through 1987. That brings the unit program cost to \$15.8 million, close to the cost of the F-14A for an aircraft designed with less capability than the Grumman fighter.

The F-14A cost in constant 1969 dollars, when the program started, is \$9.7 million per unit. Adding escalation costs brings that figure to \$17.9 million per aircraft through 1981. Research and development recovery costs added to the \$17.9 million brings the cost to \$19.2 million based on the present production schedule, which includes the Iranian buy of the fighter.

Administration, Defense Dept. and congressional officials are quick to accept the increased costs for a production program such as the F-18, but slow to accept the levels of funding necessary to maintain and modernize aircraft already operational in the fleet, and yet that is where real combat effectiveness starts, Navy officials said.

NAVY TO PROPOSE NEW F-14 ENGINE

Navy reluctantly will submit a proposal to Congress in the near future for development of a new engine primarily for the Navy/Grumman F-14B fighter.

The commitment to submit a proposal was made at a session of the House Armed Services Committee last week by Vice Adm. F. C. Turner, deputy chief of naval operations, air warfare, following a barrage of congressional criticism of the Navy's failure to initiate the project with \$15 million appropriated for Fiscal 1977.

Principal reason for the Navy's inaction is the greater urgency accorded the extensive program to modify and retrofit the Whitney TF30 engines installed in Pratt & 234 F-14A aircraft to prevent engine-related accidents and improve the aircraft's reli-

ability (AW&ST Feb. 28, p. 26).

The Navy estimated the cost of the modification at \$1 million per aircraft. The program started last fall with \$24.5-million funding.

"The first priority is to fix the one [en-gine] we have," Adm. Turner said.

The committee ultimately approved an additional \$66.9 million for the modifications, making a total of \$91.4 million. The funding will be provided by reprograming Fiscal 1977 moneys budgeted for the Rockwell International Condor missile program, which has been terminated.

In addition to the House Armed Services Committee, the Senate Armed Services and the House and Senate Appropriations committees must approve the action.

Adm. Turner urged caution in proceeding with a new engine development program to assure that it is credible and logical. He assured the committee that "we would like to have the engine."

In their reports on the Fiscal 1977 appropriation, both House and Senate Appropriations committees directed a competitive hardware demonstration program.

ADDRESS BY JUDGE ROBERT A. AINSWORTH, JR.

Mr. EASTLAND. Mr. President, I ask unanimous consent that an address by Judge Robert A. Ainsworth, Jr., delivered at the law alumni banquet honoring the members of the Loyola Law Review be printed in the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PROPOSED SPLIT OF THE U.S. COURT OF APPEALS FOR THE FIFTH CIRCUIT

It has been suggested that a discussion of the proposed plan to split the United States Court of Appeals for the Fifth Circuit into two circuits might be of interest to you tonight.

This subject is of current interest and importance because it is now being considered by the Congress along with the omnibus federal judgeship bill to create a large number of additional judgeships in the nation.

According to studies which have been made by the Committee on Court Administration of the Judicial Conference of the United States and presented to the House and Senate Judiciary Committees, there is a pressing need for 107 additional federal district judges and 37 more appellate or circuit judges. At the present time there are only 399 authorized federal district judgeships and 97 federal appellate judgeships, a total of 496.

Congress has not created a new federal district judgeship since 1970, seven years ago; and no new federal appellate judgeships since

1968, nine years ago.

In the meanwhile, the caseload in the federal courts has increased tremendously. The recent Report of the Department of Justice Committee on Revision of the Federal Judicial System makes the following observation in this regard:

"Our federal courts have served us so well for so long that we have come to take their excellence for granted. We can no longer afford to do so. The federal court system and the administration of justice in this nation need our attention and our assistance. Law and respect for law are essential to a free and democratic society. Yet without a strong and independent federal judicial system we can maintain neither the rule of law nor

respect for it.

"The central functions of the federal courts established under Article III of the Constitution of the United States are to protect the invidual liberties and freedoms of every citizen of the nation, to give definitive interpretations to federal laws, and to ensure the continuing vitality of democratic processes of government. These are functions indispensable to the welfare of this nation and no institution of government other than the federal courts can perform them as well.

"The federal courts, however, now face a crisis of overload, a crisis so serious that it threatens the capacity of the federal system to function as it should. This is not a crisis for the courts alone. It is a crisis for litigants who seek justice, for claims of human rights, for the rule of law, and it is therefore a crisis for the nation.

"In this century, and more particularly in the last decade or two, the amount of litigation we have pressed upon our federal courts has skyrocketed. In the fifteen year period between 1960 and 1975 alone, the number of cases filed in the federal district courts has nearly doubled, the number taken to the federal courts of appeals has quadrupled, and the number filed in the Supreme Court has doubled. Much of this litigation is more complicated because of the rising complexity of federal regulation.

"Despite this rising overload, we are asking the judges of the federal courts to perform their dutles as effectively as their predecessors with essentially the same structure and essentially the same tools. They are performing wonders in coping with the rising torrent of litigation, but we cannot expect them to do so forever without assistance."

For the first time in more than eight years the political climate is right for Congress to create additional judgeships and to provide the judgepower which is so badly needed in the seriously overburdened federal judicial system. A new President has taken office and with the cooperation of the Congress we look forward confidently to obtaining the additional judges necessary to handle the rapidly increasing caseload in the federal courts of the nation. Thus the opportunity exists to help solve the crisis which affects the Fifth Circuit United States Court of Appeals—the nation's largest federal appellate court, the court with the largest caseload and the most judges—15 in number. The most significant thing to be done is to add judges but for two separate autonomous courts rather than one.

The present United States court of appeals system was established by Congress in 1891, 86 years ago, when the nation was divided geographically into ten circuit courts of appeals. Only one geographic change has been made in these courts and that occurred in 1922 when the Eight Circuit was split to create the new Tenth Circuit. The present boundaries are largely the result of historical accident and do not satisfy such criteria as the parity of caseload and geographical compactness.

The Fifth Circuit, the largest of the federal appellate circuits, extends from El Paso, Texas, to Miami, Florida, and comprises six states: Texas, Louisiana, Mississippi, bama, Georgia, Florida and the Canal Zone. The 1970 census showed that the total population of the states in the Fifth Circuit was 32 million people. The rapid and explosive growth of the Deep South, of the states of the Sun Belt, the new consciousness by the bar of the power of the judiciary, the strong American predilection to litigate differences in courts of law, the upsurge of suits by prisoners, and of civil rights actions are only a few of the factors that have so greatly contributed to the extremely large caseload of

In 1961 a total of 630 appeals were filed in the Fifth Circuit. In the last fiscal year, 1976, 3,629 appeals were filed in this court, a 476 per cent increase in 15 years. The judges of the Fifth Circuit sit in panels of three judges and oftentimes en banc with the entire court on a bench in the Courthouse on Camp Street here which is the largest in the United States—large enough to seat all 15 judges at one time

But there is no courtroom in the Camp Street Courthouse large enough to seat 27 judges, which is the number of judges necessary to cope with the present caseload. A court of 27 judges would be absolutely unmanageable. As the Senate Judiciary Committee said two years ago in its report on the bill pertaining to the reorganization of the Fifth Circuit:

"It is evident to the Committee that simply increasing the number of judges from 15 to 21 or to 25 is not a solution. While this would reduce the per judge average caseload, it probably would not materially reduce the

workload since the logistical and coordinating problems would also be increased. A single judge would have to review the productivity of 24 rather than only 14 colleagues. The number of intra-circuit conflicts would likely increase, resulting in the need to hold more en banc hearings. Testimony received indicates the problems attendant upon en banc hearings conducted by a court of 15. Seemingly, the problems would be magnified by a court of 25. There is further the fact that the element of collegiality is diminished as the size of the court increases.

"For these and other reasons, the Committee concurs in the conclusion reached by the Commission that an increase in the number of judges in the Fifth Circuit as presently constituted is not a solution to the problem. The solution recommended by the Commission is to split the Fifth Circuit so as to create two circuits in place of the one."

The Fifth Circuit has the largest number of case filings per judge of any federal appellate court in the nation. In fiscal year 1976 the filings in the Fifth Circuit were 242 per active judge compared with the national average (adjusted to omit the Fifth and Ninth Circuits) of 173 filings per judge. The rate of terminations of cases per judge is also the highest in the nation.

If you are concerned with our plight, save your feelings for the litigants; the disposition of whose cases is being delayed with a large backlog which continues to accumulate.

There simply is no adequate cure for the problem short of obtaining additional judge-power and splitting the circuit into two manageable circuits, the Fifth and a new circuit, perhaps the Eleventh.

The Congressional Commission on Revision of the Federal Court Appellate System in its recent report said in this regard:

'An increase in the volume of judicial business typically spawns new judgeships. The Fifth Circuit has grown to a court of active judges, each of whom shoulders a heavy workload despite the use of extraordinary measures to cope with the flood of Serious problems of administration and of internal operation inevitably result with so large a court, particularly when the judges are as widely dispersed geographically as they are in the Fifth Circuit. For example, it becomes more difficult to sit en banc despite the importance of maintaining the law of the circuit. Judges themselves have been among the first to recognize that there is a limit to the number of judgeships which a court can accommodate and still function effectively and efficiently. In 1971 the Judicial Conference of the United States endorsed the conclusion of its Committee on Court Administration that a court of more than 15 would be "unworkable". At the same time, the Conference took note of and quoted from a resolution of the judges of the Fifth Circuit that to increase the number of judges on that court "would diminish the quality of justice" and the effectiveness of the court as an institution."

The Congressional Commission has recommended that the Fifth Circuit be split in two, the Fifth Circuit to be composed of Florida, Georgia and Alabama, and the Eleventh Circuit of Texas, Louisiana, Mississippi and the Canal Zone. The caseload would be about evenly divided and if the split is made there would be two courts, one of 14 judges and one of 13 judges.

The Senate Judiciary Committee last year proposed that the circuit be split so that the Fifth Circuit would be composed of two completely autonomous divisions. The Fifth Circuit, Eastern Division, would be composed of Alabama, Florida, Georgia and Mississippi and the Canal Zone, and the Fifth Circuit, Western Division, would be composed of Louisiana and Texas. Under this plan the Eastern Division would have a

slightly larger caseload whereas if Mississippi were shifted to the Western Division the caseload would be evenly divided.

I dislike the thought of splitting the venerable and proud Fifth Circuit. Its geographical boundaries in the six states of the Deep South have existed for years. The court has gone through many severe crises. It has decided some of the most controversial cases in the history of the nation and its decisions have profoundly affected the lives of many of the millions of people who reside in it. It has been in the vanguard of protecting the rights of individuals and of stoutly maintaining the civil rights of all citizens. In many respects it is the court of last resort for the people of six states, for the Supreme Court rarely grants certiorari from its decisions and seldom reverses it.

But the time has come to move along. We must now defer to the litigants who bring their cases to us for decision. We cannot postpone consideration of these matters for the old cliche still applies that "Justice delayed is justice denied."

A practical solution is at hand. It is much desired by the large majority of the judges of the Fifth Circuit. Perhaps you will see in this year 1977 a big change in the composition of a mighty and powerful court. Things may not be the same. But they never are.

CONDITIONS IN HAITI DROUGHT

Mr. BROOKE. Mr. President, it is my unhappy purpose, today, to call to the attention of the Senate yet another condition of drought in Haiti. Many of my colleagues will remember the severe drought conditions that afflicted the Haitian people in 1975. While some respite from those conditions occurred in 1976, it now appears that improved conditions were just a brief respite from continued tragedy.

Insufficient rainfall during the latter part of 1976 has led to extensive crop failures in northwest Haiti and on the island of Gonave. Both these areas, as well as other parts of Haiti, provide a marginal standard of living for their inhabitants even in the best of times. Under drought conditions these people simply cannot survive without outside assistance

On March 21, 1977, the U.S. Ambassador to Haiti declared that a disaster existed and requested the use of disaster relief funds for the costs of air shipping and operating temporary power generating capacity for about 1 month. A subsequent request was forwarded to the Department of Defense by the Agency for International Development for the loan of four 750 KW generators to Haiti and their transportation to that country as soon as possible.

AID has also arranged with the Center for Disease Control in Atlanta for the dispatch of a CDC epidemiologist to Haiti to assess the dangers of disease under the drought conditions.

Credit should be given to the work of voluntary agencies who, with limited resources, are making a major contribution to the drought relief effort. AID summarizes several of these efforts in the following manner:

CARE, Inc., and Church World Services in February asked for supplemental Title II shipments totalling \$592,900 for use in food for work projects. This assistance has been approved for approximately 2.5 million man/ days of work from 19,000 workers who support about 66,000 dependents.

A cable received in AID/W April 4 indicated that Red Cross field representatives had reported a significant increase in mortality rate in Northwest Haiti and Gonave and requested 120 tons of dried milk as further Title II assistance. A telegram sent April 5 approved the request. This food is to be shipped to Haiti by CARE and distributed by the Red Cross to approximately 20,500 infants or pregnant/lactating women for three months.

It is also evident that Haiti will require additional foodstuffs to meet the emergency. On March 30 the Government of Haiti requested an additional 10,000 tons each of corn and rice to be sold under Public Law 480, title I provisions. Unless conditions improve in the near future, it appears reasonable to assume that further requests will be forthcoming.

As one who has a deep affinity with the Haitian people, their continued suffering is a heartrending spectacle. It is in the best humanitarian traditions of the American people that our country stands ready to provide the assistance the Haitians need to meet this latest disaster and improve their capacity to become more self-sustaining in the future.

HUMAN RIGHTS IN LATIN AMERICA

Mr. KENNEDY. Mr. President, I call the attention of my colleagues to a recent column by Jack Anderson and Les Whitten underlining the need for continued concern about human rights in Latin America.

Mr. Anderson has cited events in Argentina, Paraguay, and Uruguay, and he has summarized the tragic story of a well-known Uruguayan journalist, Enrique Rodriguez Larreta, who was kidnaped and tortured in Argentina, transported across the border to military personnel in Uruguay and tortured once more.

Let me simply note that Mr. Rodriguez Larreta is a journalist of note, a former member of the National Committee of the Partido Nacional, one of Uruguay's traditional political parties prior to the military coup, a former secretary to the President of the Municipal Council of Montevideo, a former department head in the administration of the General Accounting Office of Uruguay.

I have seen the full deposition of Mr. Rodriguez Larreta and I have transmitted that deposition to the Inter-American Commission on Human Rights.

I ask unanimous consent that the Anderson column be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

Some Latin Regimes Use Torture (By Jack Anderson and Les Whitten)

President Carter's aggressive defense of human rights has been rejected by a number of Latin American regimes that still rely on imprisonment, torture and murder to perpetuate themselves in power.

Five Latin American nations, outraged at the Carter administration's criticism of their repressive police states, have refused to accept further American military aid. But this face-saving attempt hasn't stifled the efforts of their people to achieve basic human freedoms.

We have heard the grim stories of many victims who have been brutally mistreated by these military governments. But rareiy have we heard a tale as detailed, credible and moving as that of Enrique Rodriguez Larreta.

He is a prominent journalist from one of Uruguay's oldest and most distinguished families. He flew to Buenos Aires last July to trace the disappearance of his 26-year-old son, also a journalist, who had emigrated to Argentina years ago. The anxious father spoke with several officials and wrote numerous letters.

On the night of July 13, a group of armed men dressed in plain clothes bashed in the door of his daughter-in-law, tied hoods over their heads and drove them in their night clothes to a room with about 30 other people.

Through his loosely woven hood, Larreta recognized his son and several other prominent people, including Margarita Michelini, the daughter of a Uruguayan senator who had been assassinated in Buenos Aires, and Leon Duarate, a Uruguayan labor organizer who had disappeared.

The guards began shoving prisoners upstairs for interrogation. "Because of the piercing screams that I could hear constantly," Larreta told our associate Joseph Spear, "I realized they were being brutally tortured."

The next evening, it was Larreta's turn. "They stripped me completely naked. Tying my hands behind my back, they suspended me by the wrists... They put a sort of loincloth on me, on which there were several exposed electrical wires. When that device is plugged in, the victim receives electric shocks at several points simultaneously. This 'machine,' as they call it, is plugged in amidst questions, threats, insults and blows to the most sensitive parts of the body."

Throughout the ordeal Larreta's tormentors asked him questions about the political activities of his son and himself. Larreta reported that his guards "seemed to belong to the Argentine Army," but Uruguayan Army officers also participated in the torture sessions, he said.

At one point, the guards suspended a water-filled tank from the ceiling, tied a prisoner named Carlos Santucho to a rope, and dangled him over the tank. He was "lowered repeatedly into the tank and pulled out again, amidst laughter and insults," Larreta recalls. "After awhile, they apparently noticed the Santucho's body showed no signs of life . . . and took him away."

On July 26, Larreta was tied up and thrown into a truck with some other prisoners. They were hauled to a military airport in Buenos Aires, flown to a base near Montevideo, and deposited in an Uruguayan house of torture.

Finally, in late August, the captors tried to convince their prisoners to take part in a phony guerrilla attack. Afterward, the prisoners would be represented by lawyers at a military trial and would later go to prison. But their lives would be spared.

Fourteen prisoners agreed to the deal; the phony raid was staged, and the captives were paraded before the press. The government officially announced that it had broken up a huge "subversive organization."

Because of Larreta's spotless record and moderate political credentials, the captors could not make a case against him. He was eventually released. His son remains in prison.

Meanwhile, fear is mounting in the armed camp called Argentina, where the military junta, under Gen. Jorge Rafael Videla, must use force to keep its shaky hold on the reins of power. Top Argentine officials, therefore, are unhappy about Carter's human rights offensive. Argentina is a "nation under siege," the generals claim. There's no room, they insist, for normal court procedures.

sist, for normal court procedures.

In Paraguay, hundreds of citizens have been imprisoned and cruelly tortured by po-

lice officials paranoid about any hint of opposition. But while the nation's 2.5 million people live in poverty, Gen. Alfredo Stroessner lives like a proverbial king. The greedy dictator has kept Paraguay under a virtual state of siege since 1954, except for the infrequent "elections" which he invariably wins.

Carter's stubborn support of human rights has yet to persuade the dictators of Latin America to ease their oppressive rule.

JIMMY CARTER'S HUMAN RIGHTS CAMPAIGN

GOLDWATER. Mr. President, Mr. during the recent recess for Easter it was my pleasure to have once again visited the Chinese on the island of Taiwan. I found here as I have found everywhere that I have been since President Carter's speech on human rights a general and enthusiastic acceptance of it. I did find at the same time, however, a question as to how he can speak so eloquently of human rights while at the same time seemingly give public acceptance to the idea that even though Red China is probably the world's worst abuser of human rights, it is all right for this country, the United States, to give recognition to her very existence.

I made several comments while on the island to the effect that I thought no Americans in high official positions, such as the Secretary of State, Members of Congress, et cetera, should visit Red China, but, if they felt they should do this, then common decency that they visit Taiwan at the same time. I have been assured on many occasions by former Secretary of State Kissinger that it was never intended during the Presidencies of Mr. Nixon or Mr. Ford, that diplomatic recognition would be extended to Red China.

I would hope that President Carter would continue to not recognize Red China, but continue to give the type of recognition which Taiwan and her people have so richly deserved as friends of the United States.

Let us quit using double standards in relations to human rights. Either they exist or they do not and they cannot exist in one country and not exist in another.

Red China is of no importance to the United States unless she becomes a free country and her only interest in obtaining our recognition is to her own advantage against the Soviets and to use it to stabilize her crumbling interior situation.

I ask unanimous consent that an editorial appearing in "Asian Outlook" in March of this year be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JIMMY CARTER'S HUMAN RIGHTS CAMPAIGN

President Jimmy Carter's human rights campaign has caught the imagination of the people of the world and may become one of the keystones of major American policies in the third century of the United States. It can easily rally the free nations of the world to follow American leadership just as the late President Franklin D. Roosevelt rallied the free people together with his historic doctrine of Four Freedoms.

doctrine of Four Freedoms.

The 39th President of the United States considers human rights as one of the com-

mon dreams of the American people. In his book entitled "Why Not the Best", Carter stated, "We Americans are proud of such individuality and diversity. But we still share common dreams . . . They include the beliefs . . . that our country should among the community of nations, set an example of courage, compassion, honor and dedication to basic human rights and freedoms . . ".

His inaugural address stressed freedom and moral duties. He spoke of his "absolute commitment" to human rights and promised that under his administration U.S. foreign policy would be guided by a sense of moral values. He noted that "the passion of freedom is on the rise" and urged the American people to undertake "a new beginning to help shape a just and peaceful world that is truly humane". He then declared that because we are free we can never be indifferent to the fate of freedom elsewhere". He also said that "our moral sense dictates a clearcut preference for those societies which share with us an abiding respect for individual human rights". He issued a clear warning to those dictators and oppressors that "a world which others can dominate with impunity would be inhospitable to decency and a threat to the wellbeing of all people"

In making human rights the cardinal feature of his foreign policy program, Carter did a 180-degree turn away from former President Nixon's 1969 pledge to "accept governments as they are". It also provided a sharp contrast to a statement by former Secretary of State Henry Kissinger in 1973 that excessive attention to human rights would mean massive intervention in the internal affairs of foreign governments all over the world.

The U.S. State Department lost no time in following President Carter's initiative on human rights by publicly rapping Czechoslovakia for its failure to live up to the human rights provisions of the 1975 Helsinki agreement. It accused the Czech authorities for harassing many of some 300 Czech intellectuals who had signed Charter 77 petition demanding various domestic reforms.

The State Department also released a statement defending Soviet dissident Andrei Sakharov, nuclear physist and winner of the 1975 Nobel Peace Prize, as an "outspoken champion of human rights" and warned Moscow that any attempt to intimidate him "will conflict with accepted international standards of human rights."

The issue was brought to its dramatic turn when an exchange of letters between Sakharov and President Carter was made known. The former told the U.S. President that dissidents have "a hard, almost unbearable situation in the East bloc countries" and argued that "our and your duty is to fight for them." The American president sent a personal letter to Sakharov through diplomatic channels, described human rights as "a central concern of my administration" and that "you may rest assured that the American people and our government will continue our firm commitment to promote respect for human rights not only in our own country but also abroad." Sakharov responded to this unprecedented gesture of goodwill and support by President Carter by urging the U.S. President to help secure the release of political prisoners and particularly to intervene on behalf of three ailing dissidents including writer Alexander Ginzburg, Yuri Orlov, head of a dissident panel that monitors Soviet compliance with the Helsinki human rights agreement and Mykola Rudenko, leader of the Ukrainian branch of Amnesty International.

Soviet responses to these appeals consisted

of an attack by the Pravda article on February 12 attacking the United States for its support of the dissidents and reminding the Westerners to stay out of Soviet internal affairs; a second protest lodged by Soviet Ambassador Anatoly F. Dobynin on February 17 and the Kremlin expulsion of George Krimsky, a Russian-speaking reporter of the Associated Press who had been working too zealously at his assignments. The State Department retailated by deporting a Tass correspondent in Washington and the Russians protested loudly at the retailation.

While Soviet crackdown of dissidents has put U.S.-Soviet relations to a severe test, the crackdown was also echoed in other satellite nations. Similar arrests were reported in Czechoslovakia, East Germany, Poland and other Eastern European nations. The arrests were also interpreted as attempts to stop U.S. intervention on behalf of the dissidents and to show the Carter administration that it has no power over dissident affairs and that it must not interfere in Soviet internal affairs.

The crackdown did not trouble the American President much. At a Washington news conference on February 24, Carter said that he had no intention to single out the Soviet Union for violating human rights and will criticize violations wherever they occur including in the United States. "We have a responsibility and a legal right to express our disapproval of violations of human rights," Carter said, "so I think we all ought to take a position in our country and among our friends and allies, among our potential adversaries that human rights is something on which we should bear a major responsibility for leadership."

When he was asked about alleged human rights violations in Iran and the Philippines, he did not name them in his reply but cited Uganda where actions of Idi Amin have caused such a crisis attracting world-wide attention and, in Carter's words, "have disgusted the entire civilized world".

Several other countries were also cited by the United States as having violated human rights. U.S. Secretary Cyrus Vance was reported to have identified Argentina, Uruguay and Ethiopia as nations which will receive U.S. aid because of their violations of human rights. Carter also pointed his fingers at South Korea, Cuba and several South American countries as human rights vio-lators. The curtailing of U.S. aid to some nations which violated human rights was admitted officially by Deputy Secretary of State Warren Christopher before the Senate Subcommittee on Foreign Assistance on March 7. Christopher said that "In some instances of human rights violations, assistance programs may be curtailed, but we must also recognize that to be even-handed, we should not just penalize but also inspire, persuade and

Whether the Soviet heirarchy would take other concrete steps to voice its displeasure at the sudden human rights campaign waged by the U.S. president remains to be seen. But there are obvious worries by some western political observers that the Soviets might balk at the negotiating table. One said that mixing morals with politics was asking for trouble with the Russians.

But in other countries, adverse reactions have already set in. Brazil has already served notice that it has decided to cancel its mutual defense treaty with the United States and would reject any future military assistance conditioned on prior examination of the human rights situation in Brazil. Argentina, Uruguay, Guatemala and El Salvador also expressed their stand in this regard against any attempt by the United States to pass judgment on its human rights policies.

The U.S. President, however, remains un-

daunted and strengthened his efforts in this regard in a speech at the United Nations on March 17. Carter condemned in his speech any deprivation of freedom around the world. He declared that "The search for peace and justice means also respect for human dignity. All the signatories of the U.N. Charter have pledged themselves to observe and respect basic human rights. Thus, no member of the United Nations can claim that mistreatment of its citizens is solely its own business. Equally, no member can avoid its responsibilities to review and to speak when torture or unwarranted deprivation of freedom occurs in any part of the world"

President Carter also pointed out in his eloquent speech that "the basic thrust of human affairs points toward a more universal demand for fundamental human rights. The United States has historical birthright to be

associated with this process".

It is only fitting and proper that an American president should assert such a leadership in the first year of its third century. Free people everywhere should indeed support his clarion call for respecting fundamental human rights and raise their voice against any

torture and deprivation of freedom.

But his omission of the Chinese mainland situation is not only glaring but also most unfortunate as it might throw doubt to his motivations behind the omission and render his campaign incomplete. Certainly, he can-not possibly blame the Soviet Communists for their deprivation of freedom of Soviet citizens and leave the Chinese Communists unblamed and uncondemned for the same crime. As the Foreign Minister of the Republic of China has pointed out on March 19 that "Democratic nations, in their effort to maintain and protect human rights, must not ignore the fact that the Communist regime has massacred millions of innocent Chinese with the most cruel tyranny on the Chinese mainland and should thus give mainland Chinese active support to help them regain their freedom."

As a matter of public record in the Congress of the United States, Chinese Communist atrocities committed from the very beginning by the Maoists have been so inhuman and barbarically un-Chinese as to shock our conscience beyond imagination. Even today, after the death of arch criminal Mao and his cohorts, massacres are still going on and innocent people are being constantly secuted, sentenced without trial, imprisoned in slave labor camps and put to death.

The United States should insist for the United Nations Human Rights Commission not only to meet more often or to move the entire division to the New York headquarters, but also to launch an immediate investigation of the human rights violations on the Chinese mainland by the Chinese Communist regime. It should also demand an immediate stop of the wanton torture and killing of the innocent people on the Chinese mainland by the Chinese Communist cadres or military

All nations must be required to fulfill their obligations in accordance with the U.N.'s Universal Declaration of Human Rights and the Helsinki Accords. As the Communist nations are the worst offenders in this respect, due priorities should be given to the investigation of the conditions existing in those countries. Major violations should be dealt with first while minor violations dealt with at a later date.

In this respect, it is also important to distinguish between friend and foe and not to mistake foe as friend. For the Communists are past masters of turning their shortcomings into a favorable situation and causing confusions and division among the free nations. Undertaking and unity among the free nations are crucial and should not be lightly sacrificed. While supporting this campaign with all our strength, we must indeed watch out carefully for any Communist maneuvers

to utilize President Carter's human rights campaign to the advantage of the Communist cause of world revolution.

NUCLEAR ISOLATIONISM

Mr. CHURCH. Mr. President, I wish to call attention to a provocative statement on the problem of nuclear proliferation made recently by a distinguished former Member of Congress from Idaho, Mr. Orval Hansen. His statement, entitled "U.S. Leadership and International Control of the Atom." was presented at the Borah Symposium on the Causes of War and the Conditions of Peace, held at the University of Idaho on March 24, 1977.

Congressman Hansen argues that:

The United States is moving toward a nuclear isolationism which could endanger the security and the health and safety of the earth's inhabitants

He contends that trying to solve the crucial problem of nuclear proliferation by the example of national restraint will not work. He believes that other nations will reprocess spent reactor fuel because of their need for the additional energy. The best approach, he contends, is to work with other nations to achieve international control of reprocessing plants, under terms which will both provide reactor fuel for peaceful purposes and prevent its diversion into bomb

Orval Hansen's proposals deserve thoughtful examination. As he notes, the United States can ill afford a retreat from international leadership in meeting the challenge of taming the atom.

Mr. President, I ask unanimous consent that the statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

U.S. LEADERSHIP AND INTERNATIONAL CONTROL OF THE ATOM

(By Orval Hansen, attorney and former Member of Congress from the State of Idaho)

History has taught us that the denial of energy will drive nations to war. To eliminate "the causes of war" and to create "conditions of peace," therefore, all countries must be assured adequate energy supplies to meet their peaceful needs. If we fail to build a system of international cooperation that will respond to the world's need for energy, we will have sown the seeds of future

For nearly a quarter century the goal of U.S. nuclear policy has been to harness the power of the atom for peaceful purposes and to discourage its use in making weapons of war. The United States has been the world leader in the development of the peaceful atom. We appear to be on the verge of forfeiting that leadership role and the opporit brings to help build an international system that will assure peaceful applications of nuclear energy and reduce the risk of nuclear warfare. The United States is moving toward a nuclear isolationism which could endanger the security and the health and safety of the earth's inhabitants.

ATOMS FOR PEACE

During the years immediately following the end of World War II the United States clung to the idealistic but unrealistic notion that all nations should foreswear nuclear energy and submit to the authority of a

proposed new international organization that would exercise exclusive control over nuclear technology. This was the thrust of the so-called Baruch Plan.

In a reversal of policy, President Eisenhower outlined a new proposal in his Atomsfor-Peace address to the United Nations General Assembly on December 8, 1953. He proposed the creation of a new organization under the UN to assist countries in developing nuclear energy for peaceful purposes. Recipients of assistance must agree to submit to international inspection and to other measures to prevent diversion of materials for weapons purposes.

By this initiative the United States acknowledged that it was impossible to prevent other countries from acquiring and developing nuclear technology. As the world leader in nuclear energy, however, it could be influential in assuring peaceful development of the powerful new energy source and in discouraging its use to build weapons arse-

nals

The United States took the lead in the creation of the International Atomic Energy Agency (IAEA) under the UN. With strong U.S. support, the IAEA has furnished technical assistance and materials to participating countries and has developed and administered a system of safeguards. Under numerous bilateral and multilateral Agreements for Cooperation the United States has furnished assistance to other countries and international organizations subject to IAEA safeguards. In carrying out its commitments under the IAEA Statute and the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) the United States has assisted other countries in the development of research and power reactors. It has been the world's major supplier of nuclear materials, equipment, technology and training.

The Atoms-for-Peace program has been a remarkable success when measured in terms of the countries that have been helped to tap nuclear energy to produce electricity and for research. Such "success," however, has also increased the risks to mankind inherent in the spread of nuclear technology. When the IAEA Statute was ratified it was noted that the proficiency gained in pursuing peaceful applications of nuclear energy would also increase the capability to produce weapons. The accuracy of that observation was dramatically underscored on May 17, 1974 when India tested a nuclear explosive device made from materials produced by a research

The accelerating worldwide growth of nuclear power reactors and the spread of nuclear technology will increase two potential threats to the health and safety of the world community from (1) the proliferation of nuclear weapons and (2) the creation of radioactive waste.

To cope with these threats and to make certain that nuclear energy continues to be a safe and peaceful servant of man, the need is more urgent now than at any time in the past for bold and enlightened United States leadership in a cooperative international effort to bring potentially dangerous nuclear activities under an effective system of safeguards and controls. The dangers inherent in both weapons and waste are global and can be effectively dealt with only through international cooperation.

A RETREAT FROM LEADERSHIP

Regrettably, the United States appears to be backing away from the creative leadership it offered to an approving world in 1953. Many of the current U.S. attitudes reflect wishful thinking, irrational fears, lack of knowledge and understanding of the nuclear fuel cycle and an exaggerated view of the power of the United States to influence the actions of other countries. The grim irony is that measures and policies described as "antiproliferation" will almost certainly reduce U.S. influence and increase the potential danger from the spread of nuclear weapons.

If current trends continue the effect of measures now being advocated will be to 1) alienate traditional allies and trading partners by imposing new conditions that violate the spirit if not the letter of international agreements and treaties, 2) force other countries that have relied on U.S. commitments to go it alone or to turn to other suppliers, including the Soviet Union, for materials and assistance, and 3) undermine efforts to achieve agreement with other supplier nations on uniform conditions for nuclear export that will strengthen worldwide safeguards.

The result will be damage to U.S. credibility and to its political relationships beyond the nuclear area and sharply diminished influence in shaping worldwide nuclear policies. The growth of nuclear energy activities outside an effective safeguards system will increase the potential risk from weapons proliferation and from radioactive waste.

A principal focus of current U.S. policy is on the reprocessing of spent nuclear fuel discharged from a reactor. During the burning or fissioning of uranium fuel in a reactor, atoms of plutonium are created by the interaction of neutrons released in the fission process with the non-burnable isotope of uranium contained in the fuel. The spent fuel discharged from the reactor contains depleted uranium, plutonium and highly radioactive fission products that constitute waste. Reprocessing is the chemical separation of the uranium, plutonium and waste. Closing the nuclear fuel cycle involves the concentration, solidification, and permanent storage of the waste, the further enrichment of the depleted uranium for use in new reactor fuel and the use of the plutonium to make reactor fuel containing both uranium and plutonium. Plutonium may be used as fuel for a power reactor. One pound is equivalent to more than 5000 barrels of oil. Plutonium can also be used to make weapons.

There is a widely held misconception that reprocessing produces plutonium. In fact, plutonium is produced in the reactor by the fissioning of uranium. To stop reprocessing will not prevent the creation of plutonium.

Many current views on U.S. nuclear policy appear to reflect two basic assumptions: 1) reprocessing of spent fuel inevitably increases the danger of nuclear weapons proliferation, and 2) if the United States will set a "good example" by foregoing domestic reprocessing and use diplomatic, economic and other pressure it can persuade other countries to abandon any plans to reprocess spent fuel. Both assumptions are deeply flawed and bear further examination.

REDUCING THE PROLIFERATION RISK

In the absence of reprocessing the current worldwide inventory of about 4000 tons of spent fuel will increase about one hundredfold by the end of the century. The inventory of plutonium in that spent fuel will reach about five million kilograms and will grow rapidly thereafter. In the absence of a system of storage under international supervision and control the plutonium inventory will be scattered throughout the world in a variety of storage modes. It is estimated that as many as fifty countries will have nuclear power plants by the end of the century. The alternative of storage at central sites under international supervision, to which I will return, raises many new problems and unanswered questions.

At best, the global inventory of plutonium will be a potential danger for tens of thousands of years, a burdensome legacy laid on future generations by those who derived the benefits of the energy produced in its creation. At worst, the plutonium could be

separated by relatively inexpensive methods using well known technology, possibly clan-

destinely, and diverted to weapons use.

The alternative to letting large amounts of plutonium accumulate is to burn it as a reactor fuel. By reprocessing and recycling the worldwide inventory of plutonium from light water reactors can be limited to about 500,000 kilograms, roughly one-tenth of the level it would otherwise reach by the year 2000.

Obviously, reprocessing does not eliminate the risk of diversion of plutonium for weapons. That risk can be reduced, however, if reprocessing and related activities are carried on at carefully selected sites under international safeguards.

THE U.S. OUT OF STEP WITH THE WORLD

The U.S. proposed the Atoms-for-Peace initiative at a time when its dominance in nuclear technology was overwhelming. Even then, it was noted at the Senate hearings on the ratification of the IAEA Statute, the United States could not impose order on the world in the nuclear or any other area. That observation applies with much greater force today.

Nevertheless, many still cling to the view that the United States should attempt to stop reprocessing in other countries by barring it in this country, by unilaterally imposing new conditions on export sales and assistance under existing agreements and by the use of diplomatic and economic pressure and other arm-twisting tactics.

Such measures will not only fail, they will be counterproductive. At least fourteen countries currently possess reprocessing capability. France is now operating a small commercial plant and is planning new additions that will greatly expand its reprocessing capacity. Britain, Germany and Japan are moving forward with plans to build and operate reprocessing plants. Notwithstanding continuous criticism and pressure from the United States, Germany has reaffirmed its agreement to sell a reprocessing plant to Brazil and France has refused to cancel its sale of a plant to Pakistan.

These tactics are creating bitterness and bewilderment among countries with whom the U.S. has had long-standing and friendly relations. Some view U.S. moves as an attempt to gain a competitive advantage in the expanding world market for nuclear exports and services. Efforts to prevent reprocessing not only fail to recognize its potential advantages in controlling weapons proliferation and in waste management but also ignore the need to conserve energy resources and the unsolved problems inherent in the permanent or long term storage of spent fuel.

RECYCLING: AN ENERGY CONSERVATION IMPERATIVE

The most compelling argument for reprocessing and recycling of the separated uranium and plutonium is that no country, not even the United States, can afford to waste such an enormous and available source of energy. Reprocessing and recycling increase the energy yield from a given quantity of uranium by about fifty percent. Put another way, one-third less uranium is required to produce a given amount of energy.

The energy equivalent of the spent fuel discharged each year by a 1000 MWE reactor is about six million barrels of oil. The energy equivalent of all the spent fuel that will be discharged by the world's reactors by the year 2000 will be just under 100 billion barrels of oil. The energy contained in the spent fuel that will be discharged by U.S. reactors alone during that period is roughly equal to the nation's current proven oil reserves, including Aleska

SPENT FUEL STORAGE ALTERNATIVE

Long term or permanent storage of spent fuel at designated sites under international supervision has been urged by some in this country as an alternative to reprocessing. Its presumed advantage is that it removes spent fuel discharged by a reactor in one country to a site where it would be stored under international controls. Thus, the risk that the plutonium might be separated, overtly or clandestinely, and used for weapons purposes would be eliminated.

This alternative raises some serious unanswered questions, however. They include: What are the environmental effects of long term storage of fuel rods containing plutonium and highly radioactive fission products? Where will such storage sites be located? On whose soil? Who will exercise control? What safeguards will be applicable? Who will pay for the cost of developing storage sites and providing continuing supervision? How and by whom will countries be compensated for the energy value of the spent fuel they deliver for storage? What will be the political effect in the country where the storage site is located of becoming the "dumping ground" for the radioactive wastes contained in spent fuel from reactors in other countries?

It should be noted that there is apparently no interest in this alternative outside the United States and there are no facilities or plans for facilities anywhere in the world for the permanent storage of spent fuel. There is currently no licensed uncommitted temporary storage anyhere in the United States that could accommodate spent fuel discharges from other countries.

OTHER PATHS TO PROLIFERATION

Preoccupation with the real or imagined proliferation potential of reprocessing has caused other means to make nuclear weapons to be overlooked. Fissionable materials for weapons can be produced by several methods that are easier, cheaper and more difficult to detect than by reprocessing spent fuel from commercial reactors. These include centrifuge isotope separation, research reactors, mass spectograph isotope separation and graphite pile. Many countries have had the technical capability to produce weapons by one or more of these methods for several years. Many more countries will achieve that capability in the next few years.

For a country determined to make nuclear weapons the least attractive method is by reprocessing spent fuel from commercial reactors.

RADIOACTIVE WASTE: MORE DANGEROUS THAN BOMBS

High level radioactive waste contained in spent fuel can be safely handled and stored. If not properly managed, however, it can create a danger that is greater than that from nuclear weapons. Radioactive waste improperly handled in any one country can result in contamination of the global environment that could threaten the health and safety of people in other parts of the world for many centuries.

The inherent dangers in nuclear wastes, therefore, make an even more compelling argument than the threat of weapons proliferation for international cooperation in forging a system that will assure the availability to all of the best technology and the most efficient methods for handling and storing waste and that will bring all such activities under effective safeguards and controls.

A NEW ATOMS FOR PEACE INITIATIVE

The principle of the Eisenhower Atomsfor-Peace initiative is still sound. There has been no report of any unauthorized diversion of materials furnished to any country by IAEA. The evidence is overwhelming that countries we have assisted under bilateral agreements are interested in making kilowatts to meet urgent energy needs, not kilotons of explosives.

Nevertheless, the worldwide growth of nuclear energy in the past two or more decades and the projected future growth pose serious risks that were not fully gauged when the foundations of the Atoms-for-Peace program were laid. New initiatives are needed to encourage continued peaceful nuclear development and to protect the world from the dangers inherent in the spread of nuclear weapons and in the accumulation of radioactive waste

U.S. policy should recognize the reality of the continued growth in the number of reactors throughout the world and in the volume of discharged spent fuel. These are global problems and can only be dealt with effectively through cooperation with other countries. Time is rapidly running out on the opportunity for U.S. leadership.

A PROPOSED U.S. NUCLEAR POLICY

In meeting its responsibilities to help build an international safeguards system, the United States should pursue the following goals:

- 1) Strengthen and broaden the authority of the IAEA. The IAEA is the only instrument now available to act for the world community in supervising nuclear activities. It should be vested with the authority to approve sites for reprocessing facilities and to administer safe-guards and controls over all activities that involve a potential danger of weapons proliferation. To strengthen that authority will require commitments by the U.S. and other countries of technology, personnel, capital and other assistance that will enable the IAEA to offer all countries the incentives to submit to its authority.
- 2) Seek supplier nation agreements and cooperation. Initiative should be taken on the diplomatic front to achieve agreement among the countries exporting nuclear materials on a uniform set of terms that make all future sales conditional upon the agreement by the customer to submit to IAEA authority and to deliver all spent fuel to an IAEA approved and safeguarded facility.
- 3) Renegotiate Agreements for Cooperation. Modifications in existing agreements should be negotiated on a mutual basis to incorporate uniform terms agreed on by supplier nations and such additional provisions that are necessary to prevent diversion of nuclear materials for weapons purposes and to support IAEA authority.
- 4) Encourage development of regional reprocessing centers. To discourage the building of national reprocessing facilities outside an adequate system of international safeguards and controls, regional centers should be developed to assure all countries essential services to meet their needs for peaceful nuclear energy operations. The United States should commit its facilities and technology to support such an effort.
- 5) Accelerate cooperative research. Programs of research, development and demonstration in reprocessing, waste solidification and storage, transportation, mixed oxide fuel fabrication, safeguards and security systems should be accelerated. Other countries should be invited to participate in these programs. Results should be made available to the IAEA to strengthen its capability and authority to administer safeguards over activities that present a potential for weapons proliferation.

POLITICAL INSTITUTIONS TO MATCH SCIENTIFIC ADVANCES

Advances in science and technology have split the atom and given mankind a powerful energy source with enormous potential for good or for evil. The challenge is to foster international cooperation and to fashion political institutions that will make certain that the atom is the peaceful servant, not the destroyer, of man.

GENO BARONI

Mr. KENNEDY. Mr. President, I invite the attention of my colleagues to a recent profile in the Washington Post of Geno Baroni, whose nomination to be Assistant Secretary of the Department of Housing and Urban Affairs was confirmed recently.

I have known Geno Baroni for many years, and I have little doubt that he will be a source of innovation and concern in this administration's efforts to reverse the recent neglect of the problems of urban America.

He calls himself the representative of the neighborhoods, and that is where the beginning must be made in rebuilding the hearts of our cities. Federal policies must begin in the black neighborhood and the ethnic neighborhoods and the Puerto Rican and Chicano neighborhoods of our central cities. Too often in the past, those neighborhoods have been the victims of those policies.

I have little doubt that Geno will be working to change that record. And from his past successes, I have little doubt that he will leave his post with a record of achievement.

I ask unanimous consent that the article from the Washington Post of April 16, 1977, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENO BARONI: WAR STORIES (By Eugene L. Meyer)

Before "Roots" became a best-seller, television series and national pastime, there was Geno Baroni.

Since the fabled melting pot boiled over in the racial and ethnic polarization of the 1960s, Geno Baroni has been talking about "who am I, the identity issue, the issue that won't go away, the issue of background."

For the 46-year old Catholic priest, roots means neighborhood. Both are in these days, suggesting that Geno Baroni may just be a man whose time has come. Social activist-cum gadfly to the liberal establishment. Baroni is moving into a new arena as assistant secretary of Housing and Urban Development for, according to his own job description, "neighborhoods, non-governmental organizations and consumer protection."

"I don't think a lot of people understand what I'm going to do or where I come from," Baroni said recently. Where he's coming from is easier to understand, however, than how that translates into policies and programs at HUD.

Like a veteran retelling war stories, Baroni reviewed his life and times over a hamburger at Trio's Restaurant, a neighborhood eatery around the corner from his National Center for Urban Ethnic Affairs at 1521 16th St. NW. Trio's is an informal place where his friend, the late Dr. George Wiley, launched the welfare rights movement of the 1960s. It was sort of a war room then, where social activists would meet to draw up strategies for change.

Like a battle tactician, Baroni drew circles and lines on any available scrap of paper to illustrate his points. It was like a nostalgia trip through a turbulent time that is only vesterday but seems light years away

trip through a turbulent time that yesterday but seems light years away.

He came from the coal mining region of Western Pennsylvania where his father, an Italian immigrant, worked for 47 years. "The

Episcopalians owned the coal mines, the Methodists and Lutherans were the bosses, and the Italians, Hungarians and Appalachians, we dug the coal," he said.

"We all went to the same company store

"We all went to the same company store and the same public school, and the bosses' daughters were our teachers in the grade school. They were great Americanizers, you know. Melting pot. 'These are the foreigners kids,' you know. I didn't speak English until I went to grade school."

He lived in the small mining town of Acosta, whose children "were looked down upon because we came out from the sticks on the school bus" to Somerset, the county seat, to become Americanized in "the Protestant school."

Baroni was ordained in 1956 from Mt. St. Mary's, a small Catholic college in Emmitsburg, Md., near the Pennsylvania border. He is now on the school's board of directors, along with Peter F. O'Malley, an Irish kid from Clinton, Mass., who is president of the Washington Capitals hockey team.

After a stint as a parish priest in working class neighborhoods of Altoona and Johnstown, Pa., Baroni came to Washington in 1960 to attend Catholic University, but there was a bureaucratic snafu and he wound up walking the streets of Shaw, in the inner city, and living at the St. Paul & Augustine Rectory at 1425 V St. NW.

Before the federal war on poverty, Baroni was becoming involved in neighborhood programs from the church as well as coordinating Catholic participation in the 1963 March on Washington for jobs and equality.

With the advent of the Great Society, he became part of a clerical mafia that dominated the District's politics of poverty. The also group included Walter E. Fauntroy, now D.C. Delegate to Congress, Channing E. Phillips and others. "We were like traveling in a little pack," Baroni recalled.

The ghetto priest was pushing social programs for poor blacks his own family in Pennsylvania could not comprehend. His truck-driving brother-in-law would say, "We're making it. Why can't they?"

"We'd get into an argument," said Baroni, "and my mother would say, 'Shut up and stop fighting. It's Thanksgiving.'". Baroni's youngest brother, meanwhile, had gone to Vietnam. "He didn't relate to Abbie Hoffman, Angela Davis, Dr. King. He went off to war because my old man said, 'We beat Hitler. You're supposed to fight for your country, America.' I say. 'This war is no good.' He says, 'You ain't the President.'".

By 1968, the brother-in-law had been laid off, the antiwar movement was in full swing, "and I was getting concerned about the alienation of Middle America—the alienation was economic, social, cultural, political—and wondered how was I ever going to get support for what I was concerned about, justice, poverty, the cities. . . .

"Here I come from the working class, and here I was in the ghetto," Baroni said. "At the same time in the 60s, there was kind of intellectual/minority thing going on. Some guy at Harvard gave a lecture. He said, 'Some of us up here are enlightened. Let's help the people at the bottom.' The people in between were the enemy."

The 1968 assassinations and civil disorders deeply affected Baroni's thinking "Here I was a white person in a black community. I became concerned about the relationship between white and black in the cities, about polarization between groups."

He began looking for the "bridge issues"

He began looking for the "bridge issues" that could unite ethnic whites and urban blacks and left 14th Street in 1969 in search of those issues in industrialized northern

"I was concerned about who was bearing the burden of social change, and who's going to shape and share the burden of social change," he said. "In the 60s, these (white ethnic) people were the enemy. The intellectual, far liberal left began to make fun of them...So in 1972, here's Massachusetts and D.C. voting for McGovern. We went from the Lyndon Johnson landslide to the Nixon landslide."

Baroni founded the National Center for Urban Ethnic Affairs and, armed with public and private grants, initiated neighborhood programs in 45 cities. "I began to realize people live in neighborhoods. People got identity from them," he said.

From his programs emerged new leaders, such as Rep. Barbara Mikulski (D-Md.) from Baltimore. The Neighborhoods United Project (NUP), a citizen lobby in close-in Prince Georges County, also sprung from his efforts.

In the five-towns area of Prince Georges next to the District line, he found, blacks and whites were able to unite around community issues of transportation and health. "We didn't try to deal with the black-white thing right away," Baroni recalled. "The issue was stop the freeway, a bridge issue."

Forsaking the melting pot for ethnic pride, saving the neighborhoods—how do ideas translate into HUD programs, under Baroni's, "consumer" mandate? Baroni

paused to think about it.

"I intend . . . I hope to be part of the policy team in terms that will relate to the revitalization of the city," he said slowly, measuring his words. "I'm going to try to develop some programs, some small programs, just like I did at the Center, involving third parties, non-governmental groups, neighborhood groups...

"See, neighborhoods have never been a part of urban policy. We ran freeways through them, right? We did urban renewal on them, right? We destroyed neighborhoods in order to save them. Remember? It sounds

like Vietnam."

PRESIDENT CARTER MEETS WITH SMALL BUSINESS REPRESENTA-

Mr. NELSON. Mr. President, as part of President Carter's continuing efforts to consult with Americans from all walks of life, he recently met with representatives of the Nation's small and independent businesses. Among those present were two leaders of the Independent Business Association of Wisconsin— IBAW—Mr. Dean Treptow and Mr. Edward Gaffney. These representatives discussed a number of concerns, particularly independent business' problems of capital formation, Government regulations, and paperwork requirements. The President promised these small business leaders monthly meetings with his domestic counsel so that the needed flow of communication can be maintained. Such meetings should be of decisive help in the effort to alert the country to the need for strengthening the small business sector of the economy.

An interesting account of the Presidential meeting has been provided by Mr. Ray Kenney, the distinguished business news editor of the Milwaukee Sentinel. I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITAL PITCH MADE BY SMALL BUSINESS (By Ray Kenney)

A week ago, Dean Treptow was sitting in Washington, D.C., wondering to himself: What the hell is the president of the Brown Deer (Wis.) Bank doing in the White House talking to the president of the United States?

"But I was," he said over a sandwich Monday, "and that sure as hell makes me feel better about the system."

Treptow and Edward Gaffney, president of Ortho-Kinetics, Inc., Waukesha, were on hand at the session in the White House cabinet room as representatives of the Independent Business Association of Wisconsin (IBAW), one of 11 organizations representing small business in a meeting with President Carter and his cabinet.

It was a fruitful session, the two Wiscon-

sinites agreed.

The groups had no particular ax to grind, they said. No preferential treatment was being sought, although the president was reminded that small business represents 43 percent of the gross national product (GNP) and 97.6 percent of the nation's business concerns. It also represents 55 percent of the private work force in the US and 48 percent of the gross national business product.

Carter, of course, is a former small business executive and presumably was aware of some of the figures, they acknowledged, but the statistics were reviewed to set the stage for a request that the administration keep open the lines of communication between big gov-

ernment and small business

We wanted to acquaint our policymakers without quantity to contribute to this nation's economic well-being and lead the policy formulation that will permit the survival of small business and increase its ability to create new jobs and new products, and sharpen true competition for the benefit of all," the men said in a brief, prepared state-

The 11 organizations had some suggestions about how that could be done, they said.

In the area of job creation alone, they told President Carter, small business represents an underutilized national resource. Figures suggest the small business employer is closer to his employe and more likely to retain his employe in times of economic down-

But increased capital retention during the early, formative and growth years of a corporation is essential, they suggested.

Capital during those years must come from internal cash flow and from borrowing. Of course, that is precisely the time when borrowing is most difficult, when the company is first establishing a track record. Congress first recognized the need 39 years ago when it exempted a company's first \$25,000 in earnings from the full 48 percent tax rate. Two years ago, on a temporary basis, this exemption was increased to \$50,000.

The groups—the Council of Smaller Enterprises, Cleveland; the National Association of Small Business Investment Companies; the National Business League; the National Federation of Independent Business; the Na-Small Business Association; Smaller Business Association of New England; the Smaller Manufacturers Council, Pittsburgh; the National Federation of Business and Professional Women's Clubs; the National Association of Women Business Owners, and the National Association of Black Manufacturers-suggested that the administration might want to support a graduation in the corporate income tax up to \$400,000 in income, where the tax rate would then become 48 percent.

On the subject of occupational safety and health (OSHA), the small business representatives won assurances that voluntary inspection is a possibility. At the present time, Treptow said, it is impossible for a small business executive to call an OSHA inspector and say, "I want to be sure that I am in compliance with the safety laws and to assure that my employes have a safe place to work. Will you come out and inspect my plant and help me identify the problem areas?"
Under the present law, the inspector would

be compelled to issue citations for noncom-

The session also explored the possibility of an overhaul in the Small Business Adminis-

tration loan guarantee programs.

Existing, well managed small business firms don't really need a financial subsidy from the government through 90 percent guaranteed loans, the groups pointed out. What they do need is access to the public debt markets.

Emphasis on the loan guarantee program should be shifted from loan availability to high credit risks to focus on the successful company that is not yet large enough to secure its own underwritings for equity or debt, they contended. The cost of such guarantees could be covered by an annual in-surance premium, not unlike the federal and private mortgage insurance programs.

Enhancement of a secondary market program through a certificate procedure would be important, the Wisconsinites told the ad-

ministration officials.

The president was sympathetic, they agreed. He assured the small business representatives that monthly meetings would be established with the White House domestic counsel-the original goal of the session.

HOTEL SOFITEL IN MINNESOTA

Mr. ANDERSON, Mr. President, one of the most exciting and unique hotel development projects in Minnesota recently is the Hotel Sofitel in Bloomington. The project is the product of years of effort and dedication by its developer, Morris Levy, Jr., whose family has been long associated with successful hotel management in the Twin Cities. Mr. President, I ask unanimous consent that an article about Mr. Levy and the Hotel Sofitel, that appeared in the New York Times on April 10, 1977, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A TOUCH OF PARIS IN THE LAND OF THE VIKINGS

(By Susan B. Tribich)

MINNEAPOLIS .- Here in the land of the Minnesota Vikings and other reminders of a Scandinavian heritage the aggressive Parisbased Sofitel-Jacques Borel hotel chain has successfully established its first American outpost.

Opened in 1975 about 20 miles southwest of Minneapolis in suburban Bloomington,

L'Hotel Sofitel has:

Ten chefs who were brought over from France

A wine cellar that stores 7,000 bottles at 55 degrees

A bakery that turns out crusty baguettes-French bread-croissants and other confec-

Bidets in one-third of the bathrooms

The 300-room, six-story hotel is a project of a franchisee, Morris Levy Jr., 53 years old, a meticulous and reserved Minnesotan who becomes animated when he discusses anything French. L'Hotel Sofitel began to turn a profit after 18 months of operation, he

said, although new hotels usually need three years to reach their break-even occupancy rates.

Mr. Levy came to the hotel business -in 1950 he and his two brothers took earlyover their parents' Hotel Dyckman in downtown Minneapolis. They sold it at the top of the market in 1963, when there was an influx of building in the area and Mr. Levy took off for a year in Paris with his wife, Dorothy, and their teen-aged sons, Robert and Michael.

He studied French at the Alliance Franand for two months awoke at 5:30 A.M. to run to baking school, where he mas-tered the baguette, brioche and croissant, while Mrs. Levy attended the Cordon Bleu.

In 1972, after several years in other investments, he and his brother Daniel, who changed his family name to Stevens, agreed to build a hotel. They favored a chain because, with an established image and means of generating business, it was easier to get financing, but Ramada Inn, Holiday Inn and Hilton already had hotels in the vicinity where they wanted to build, and Hyatt required a minimum of 900 rooms and an in-

vestment of \$40,000 per room.

In contrast, a Sofitel has a distinctive ambience and costs between \$30,000 and \$40,-000 per room to build-giving an indicated total cost of \$9 million to \$12 million, although he declines to say what it cost. Furthermore, Mr. Levy said, Sofitel-Jacques Borel "had a good chain identification; they were well operated and geared to businessmen." In trips to England, Switzerland and France, he added, "I looked at other chains, but they didn't match up."

Mr. Levy and his brother have controlling shares in Minneapolis's L'Hotel Sofitel, in which two local businessmen also invested. He paid the chain an unnamed flat price for use of the name and continues to pay royalties of 2 percent on gross sales of room, food

and beverage.

Seated in one of the hotel's two restaurants, Mr. Levy munched on pieces of golden crust from a basket of rolls, as his eyes darted around the room. Asked what he would do differently if he could start over, the answered briskly: "Nothing."

Annual sales for a Sofitel in the 300-room category should average \$6 million, or \$20,000 room including food, he said, and franchise could expect an income of roughly 25 percent of total sales before fixed charges

For his hotel, sales have jumped 30 percent every six months.

The hotel's restaurants-Le Cafe and Chez Colette-provide a large portion of the hotel's revenues, since they serve many who are not hotel guests. Most domestic hotels, derive half their income from food and beverages and half from rooms. But at Sofitel here restaurants this year will probably account for 60 percent of total income, and when the hotel first opened that figure was much higher.

Mr. Levy, who has the exclusive contract to represent Sofitel in seeking franchises in the United States, Canada and the Caribbean, is already laying expansion plans. He hopes to have 10 hotels of 200 to 600 rooms under construction or in operation in five

The first expansion he plans is for suburban Atlanta, and although the Atlanta area has been notably overbuilt in hotels, he said, "We have a strong developer and an excellent location in mind."

"Occupancy rates in Atlanta are heading back up," he added, and the site he is viewing is near a high-income suburb, rather than in overbuilt downtown. He expects to open the hotel there in less than three years.

He is also looking into sites in suburban New York and Los Angeles, Houston, the Chicago airport, Scottsdale and Phoenix, Ariz. and Kansas City. The hotels would most like-

ly be owned and managed by a franchisee or owned by outside investors and managed by the chain.

Mr. Levy feels that the tendency of American hotels to cut back on services and frills is being reversed, and Sofitel, with its bellmen and extensive room service, is in the vanguard.

"My ideas," he said, "was to take a French hotel-the type my wife and I enjoyed so much when we traveled-and adapt it to the American market and American tastes." Small touches include fancy imported soap, packets of bubble bath and outsized bath towels in the bathrooms, the turning down of beds at night and the availability of

hair dryers and steam irons.

a reservation and an operator Call for answers with a correctly singsong "Sofitel, bonjour." The restaurants deftly turn out a wide range of dishes from Brioche à la Moelle (brioche filled with marrow) to Perdrix au Petits Pois (partridge with garden peas) to Profiteroles au Chocolat (cream puffs, ice cream and chocolate sauce), and the bartenders probably serve more kirs than martinis. One of the chefs had worked in the Paris seafood restaurant Prunier and another in Maxim's.

Levy observed that "French doesn't have to mean haughty," And his own staff assumes an unaffected Midwestern congeniality. Furthermore, there are no dress codes in

the hotel's restaurants.

The boxy beige exterior of the hotel is in quiet good taste, while the interior is built around a large, airy atrium. Guest rooms on three sides look out on the lobby, which has a recessed level containing a swimming pool and patio. Giant Cissus antarctica plants hang from the rafters, and rays of sunlight slant through a glass wall and a clerestory.

Much of Sofitel's interior reflects Mr. Levy's personal tastes, and he tried to keep the guest rooms from looking institutional. There 18 different décors (the normal number is three, Mr. Levy says) ranging from coffeebean brown with black and chrome to kelly green with white. Chez Colette is designed as a fin-de-siècle brasserie with some authentic relics. Mr. Levy bought the marble café tables in a French junkyard and salvaged and shipped home some wooden Bentwood-style bar stools. The beveled glass partitions and brass hardware trim come from France, and three original letters handwritten by Colette share one wall in the restaurant with other memorabilia of the era.

President Gerald R. Ford stayed in L'Hotel Sofitel when he spoke to the American Legion in August 1975, and his party, including the press, occupied 200 rooms. Mary Hem-ingway and Julia Child are among other notables who have stayed in or dined in the hotel.

Moreover, many Midwesterners spend weekends in Minneapolis, a solvent livable city of 416,000 people, with a university, symphony orchestra, the new Walker Arts Center and Tyrone Guthrie repertory theater and numerous recreational lakes. At Sofitel they pay \$80 per couple for two nights including \$35 worth of food in the restaurants, and account for 10 percent of weekend guests.

Business travelers also frequent the Twin Cities—the headquarters of numerous corporations, including General Mills, Pillsbury, Honeywell, Minnesota Mining and Manufacturing, Cargill, Data 100 and Control Data. During the week 80 percent of the guests are on business, and rooms rent for \$29 to \$41 a person.

Mr. Levy had lived in the area for 30 years, and he said, "If you want to devote time to a hotel, you have to live nearby." Also, studies showed the suburban Bloomington site on Route 494 would get a higher occupancy rate

than an inner city site.
Within a stone's throw are a Holiday Inn. with rooms costing \$25 to \$30 a person; Ra-

mada Inn, \$26 to \$75; Howard Johnson Motor Lodge, \$19 to \$24, and the towering Radisson South Hotel, \$30 to \$35.

Mr. Levy feels that the concentration of hotels and motels in the area has a generative rather than diversionary effect on Sofitel, and he expresses confidence that his hotel will pull customers on the basis of person-

alized service and ambience.

Although he officially is not involved in the hotel's daily operations, but rather in marketing and promotions, Mr. Levy often makes the 20-minute drive to the hotel from his New England-style home on Lake Minnetonka seven days in a row. Giving visitors a tour of the guest rooms, he frequently stopped to call housekeeping to say that a pillow was missing or that a section of the hallway hadn't been properly vacuumed. After a particularly hectic day, which may include a dinner at Le Café, he sleeps over

in a vacant guest room.
"It's a fulltime job," he mused. "Personal service is involved, and that makes it difficult. And then you have to ride out the peaks and plateaus. You don't stay with hotels un-

less you like the business."

SPAIN

Mr. KENNEDY. Mr. President, the news from Spain announcing the date for parliamentary elections on June 15, the first such election in 41 years, deserves our attention, our appreciation and our applause.

The progress made by the current Spanish leadership in determinedly carrying that nation on a transition from authoritarian rule to democracy is

impressive.

At the same time, there has been clear support of the vast majority of the Spanish people for this return to a free political system under the rule of law. The referendum setting forth the return to democracy was approved by a near unanimous vote.

This example, along with that of Portugal, demonstrates persuasively that the force of arms may limit the public expression of a people's desire for liberty; but it never succeeds in eliminating the desire.

As the process continues of a return to democratic institutions and personal liberty. I hope that the administration and the Congress will join in offering greater assistance to a democratic Spain in meeting the economic difficulties that face that nation. In that effort, I would join with the Senator from Minnesota, Mr. Humphrey, who wisely has urged that we, together with the other nations of Western Europe, design together with Spain an integrated long-term economic development plan.

Mr. President, I ask unanimous consent to have printed in the RECORD an article on this subject from the Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPANISH ELECTION SET FOR JUNE 15; FIRST IN 41 YEARS

Madrid.—The government of Premier Adolfo Suarez announced yesterday that Span's first free elections in 41 years will be held June 15.

A new two-house Parliament, consisting 350 deputies and 207 senators, will be elected by all Spaniards over 21 years old and will replace the unicameral body set up in 1942 by the late dictator Francisco Franco.

The government's decision to hold free elections came amid political demonstrations and strikes protesting government economic policies, labor laws and the current 20 per cent rate of inflation.

The newly legalized Communist Party announced its list of candidates, including Dolores Ibarruri, 82, a Civil War heroine popularly known as "La Pasionaria." She has lived in exile in the Soviet Union since 1939.

In Paris, meanwhile, a lawyer for the estate of Spanish artist Pablo Picasso announced that his monumental painting "Guernica" cannot be returned to Spain "until after the full reestablishment of public liberties." It was loaned in 1939 to the Museum of Modern Art in New York City. Picasso always said that the painting depicting the effect of German bombs in the Civil War "belonged to the Spanish Republic."

The Spanish Communist Party yesterday decided to adopt the red and yellow flag of the Spanish monarchy in recognition of "the great advances...made toward the reestablishment of democratic liberties." The party was one of the mainstays of the republic.

INTERNATIONAL BROADCASTING SINCE HELSINKI: MORE IMPOR-TANT THAN EVER BEFORE

Mr. HUMPHREY. Mr. President, it has now been nearly 2 years since the United States joined with the Soviet Union and 33 other nations in signing the Helsinki Declaration.

Many in this country felt the United States and our Western European allies gained very little from the agreement. In fact, it has been argued that the Soviet Union was the major beneficiary of the declaration because it allegedly recognized Russian hegemony over Eastern Europe. Yet, it has been the human rights aspects of the basket 3 provisions of the declaration which have sparked a defensive posture on the part of the Warsaw Pact nations. President Carter, with strong support from the Congress. has pressed for compliance with the basket 3 provisions, creating serious problems for the Soviets on such issues as treatment of dissidents, reunification of families, and unrestricted emigration

It is in this light that the role of international broadcasting takes on added importance.

As was noted in an editorial appearing in the Los Angeles Times last winter:

Radio broadcasts are, as Lenin once put it, "like a newspaper without paper ... and without borders." Regimes fearful of dissenting voices and differing opinions cannot censor foreign broadcasts of news and commentary. Not even jamming, an expensive and technically difficult chore, can succeed in wholly silencing them.

That is why Radio Liberty and Radio Free Europe have been so effective in telling the peoples of the Soviet Union and its East European allies of events and viewpoint that their own governments suppress and dis-

As my colleagues will recall, both Radio Liberty and Radio Free Europe ran into serious difficulties with the Congress because they were supported almost entirely by the Central Intelligence Agency. This link was severed in 1971 and funding now comes from open congressional appropriations.

Under the extremely able leadership of Dr. David M. Abshire, who recently resigned as chairman of the board for international broadcasting, both radios have not only gained in stature significantly, but they have also gained in importance.

As the Economist of London noted last October:

Radio Liberty and Radio Free Europe are not relics of the cold war; they are more important than ever. Because they are seasoned watchers of east-west relations, their expertise is needed to beat off the present Soviet attempt to dodge the consequences of the declaration that 35 countries signed at Helsinki last year. The Russians want to avoid the opening up of contacts between eastern and western Europe promised by that document. A conference is due to be held in Belgrade next June to review what has happened-and not happened-since Helsinki. It is important that the record be known to the people of eastern Europe and Russia. One way of doing that is to ensure that Russia cannot exclude RFE and RL reporters from the proceedings in Belgrade as it excluded them, for example, from the winter Olympics in Salzburg last February. Another is then to make sure that the reports get heard in the communist countries

Recently, I had the opportunity to meet with Vladimir Bukovsky, the Soviet dissident who spent so many years in prison and who was only recently expelled from the Soviet Union. Mr. Bukovsky emphasized the important role played by both radios. As noted in a column written by C. L. Sulzberger in the March 5 New York Times, Bukovsky was quoted as saying:

in keeping the Warsaw Pact peoples informed about what is really happening. The cost of jamming intrusive broadcasts is immense. There are up to 3,000 jamming transmitters in the Soviet Union, which is said to spend more than six times as much on blocking foreign programs as on spreading its own radio propaganda.

In a review of Mr. Abshire's recent book, "International Broadcasting: A New Dimension of Western Diplomacy," New Europe, a European Movement quarterly published in London, noted in its first edition for 1977:

. . . as David Abshire—a former U.S. Assistant Secretary of State—points out, unlike all other media of communication, it (radio) cannot be stopped at frontiers. It comes into a listener's home always as an invited guest, admitted or rejected by the turn of a dial; and it cannot be selectively edited or censored by an individual.

In responding to the challenges of the Helsinki declaration, I believe it to be particularly important to consider seriously Dr. Abshire's recommendations for strengthening our international broadcasting efforts.

Again, quoting from New Europe:

The United States, in Abshire's view, needs to allocate much greater resources to international broadcasting. It must recognize that, as long as Soviet leaders insist that détente and coexistence mean intensifying the ideological struggle and tightening censorship, its broadcasts must openly and purposefully aim at bringing ideas and information to these closed societies.

Radio Liberty and Radio Free Europe should, he believes, continue to try and take the place of East European domestic radio

services. The Voice of America should have more independence, along the lines of the BBC. There should be more exchange of technical facilities between international broadcasters such as the VOA and BBC.

The President has taken the initiative in following up on Dr. Abshire's recommendations with the recent announcement that his administration would request additional funds to strengthen both radios' transmitter power.

Mr. President, I believe Dr. Abshire deserves our commendation and gratitude for the immensely valuable contributions he has made to preparing both Radio Free Europe and Radio Liberty for the challenges arising out of the Helsinki agreement.

Mr. President, I ask unanimous consent that the editorials and columns referred to in my remarks be printed in the RECORD.

There being no objection, the material was ordered to be printed in the Record, as follows:

HEARING THE VOICES OF DISSENT

Radio broadcasts are, as Lenin once put it, "like a newspaper without paper . . . and without borders." Regimes fearful of dissenting voices and differing opinions cannot censor foreign broadcasts of news and commentary. Not even jamming, an expensive and technically difficult chore, can succeed in wholly silencing them.

That is why Radio Liberty and Radio Free Europe have been so effective in telling the peoples of the Soviet Union and its East European allies of events and viewpoints that their own governments suppress or distort.

David M. Abshire, chairman of the Board for International Broadcasting, the public agency that oversees the operation of the two radio services, has come up with some recommendations for their improvement that merit consideration.

Abshire, a former assistant secretary of state, suggests in a recent study the extensive sharing of the services' resources with other international broadcasting agencies, such as the Voice of America, the British Broadcasting Corp.'s foreign service, West Germany's Deutsche Welle and Radio Canada International. While there is a small degree of cooperation among some of these agencies, Abshire argues that much more can be done in cooperative use of transmitters and other technical matters, and a greater sharing of research facilities.

Sharing on this level could well improve efficiency by minimizing duplication on administrative and technical levels, and thereby reducing operating costs.

Abshire rightly maintains that such cooperation should not extend to the broadcasts themselves, or lead to the creation of a sort of NATO of the airwaves.

Each service should remain free to exercise its own editorial judgment, rather than attempt to have four or five non-Communist nations speak to the Russians and their satellites with the same voice.

Such uniformity would destroy a major asset of the foreign broadcasts—the diversity that is lacking in Soviet and satellite broadcast services. Uniformity would undermine the credibility of the foreign broadcasts, and lend substance to Soviet and satellite allegations that they are merely propaganda ploys designed to subvert their institutions.

A pooling of resources on an international scale would be a logical extension of the 1973 reorganization of Radio Liberty and Radio Free Europe and the establishment of the Board for International Broadcasting as its overseer. Both radio services, however, maintain their separate broadcast functions of providing what is in effect an alternative home service to the Russians and their allies.

Radio Liberty beams its broadcasts to the Soviet Union; Radio Free Europe concentrates on Eastern Europe. The two services reach an estimated 70 million listeners each month.

The reorganization has done much to alleviate criticism that the two services are "relics of the cold war" that should be silenced. The criticism reached a peak in the 1960s with the disclosure that they were secretly funded almost entirely by the CIA. The CIA link was broken in 1971, and funding—\$53.4 million for the current fiscal year—now comes from open congressional appropriations.

It is true that both radio services were set up during the cold war to generate dissatisfaction and even insurrection among the "captive" peoples under Communist rule. But today, they are rightly prohibited from broadcasting inflammatory material. Touching on an issue that arose in the presidential campaign, the services, according to their new guidelines, must not "in any way lead East European people to believe that in the event of an uprising . . . the West would intervene militarily."

In view of their cold war connotations, the names of the radio services might be changed. One suggestion is to call the now-combined facilities Radio Human Rights.

The restrictions on their broadcasts have not diminished Soviet hostility. Despite provisions in the 1975 Helsinki agreement and international conventions supporting the free flow of information across frontiers, the Russians have continued jamming some foreign broadcasts. And they have not stopped their long and fruitless efforts to silence the two services.

During the expected visit of Soviet party leader Leonid Brezhnev to West Germany early next year, he is likely to urge the Germans to shut down the services' program headquarters in Munich.

The Germans are expected to reject the suggestion; we hope they do. The Soviet and East European people should continue to have the opportunity to listen to voices other than those of government spokesmen reading officially approved texts.

[From the Economist, Oct. 16, 1976] KEEP THEM BEAMING

Mr. Jimmy Carter, riding high on President Ford's bumbling about Soviet control of eastern Europe, told an audience of Polish-Americans in Chicago on Monday that if he becomes president he will insist on an end to Russian jamming of Radio Free Europe and Radio Liberty. Good: these two American-financed radio stations need friends in high places. A sizeable proportion of the large number of Russians who tune in to western broadcasts are Radio Liberty's listeners; Radio Free Europe is heard by millions throughout eastern Europe. But it is just the stations' skill in getting hold of the sort of news about events inside Russia and eastern Europe which the rulers of those countries would prefer to keep dark, and then winging that news back eastwards, which is about to provoke another communist attempt to suppress them.

It is a fair bet that when Mr. Brezhnev comes to Bonn later this autumn he will have another go at persuading Helmut Schmidt to expel these "relics of the cold war" from their Munich headquarters. There are reports that Mr. Schmidt is tempted to agree, maybe in the hope of buying off another Russian and East German squeeze on Berlin. The importance of Mr. Carter's statement is that it shows there will be no support in Washington for any such retreat by Mr. Schmidt. President Ford has said that he and Mr. Kissinger are supporters of

the Munich stations. Mr. Carter makes it unanimous.

Radio Liberty and Radio Free Europe are not relics of the cold war; they are more important than ever. Because they are seasoned watchers of east-west relations, their expertise is needed to beat off the present Soviet attempt to dodge the consequences of the declaration that 35 countries signed at Helsinki last year. The Russians want to avoid the opening up of contacts between eastern and western Europe promised by that document. A conference is due to be held in Belgrade next June to review what has happened-and not happened-since Helsinki. It is important that the record should be known to the people of eastern Europe and Russia. One way of doing that is to ensure that Russia cannot exclude RFE and RL reporters from the proceedings in Belgrade as it excluded them, for example, from the winter Olympics in Salzburg last February. Another is then to make sure that the reports get heard in the communist countries.

SEVERAL VOICES, ONE CHORUS

Keeping Radio Free Europe and Radio Liberty alive and vigorous is one part of what needs to be done. But the whole western broadcasting effort to the communist world—which also includes the BBC, the Voice of America, and Germany's own efficient operation—can be made more cost-effective.

This does not mean merging all these individual organisations into a sort of Nato of the air. But Mr. David Abshire, the chairman of the American board which oversees the work of RFE and RL, has just suggested a number of good ideas for better coordination. The various stations could make more joint use of transmission times and relay stations. They could pool their research and documentation systems. In 1979, when an international conference is due to allocate new short wave frequencies, they could join together to get a better deal for them all; the short waves are getting overcrowded, and western broadcasters are suffering. The war in the air is one east-west contest that need not be lost by the west.

[From the New York Times, Mar. 5, 1977] Who Calls The Kettle Black?

(By C. L. Sulzberger)

BRUSSELS.—It is fortunate that the Soviet Government is relatively accustomed to being called conscienceless and therefore has no evident feelings of embarrassment about its present position on the issues of detente. While arming to the teeth in a process that has accelerated rather than lessened since the so-called cold war ended, Moscow accuses the West of "feverish militarist preparations."

And while protesting whatever it conceives to be a violation of the 1975 Helsinki agreement on European security, it jams radio programs beamed from the West and seeks to stifle dissident voices whose freer speech was guaranteed at Helsinki—and also in the Soviet Union's own "Stalin Constitution."

It is true, indeed, that Aleksandr Solzhenitsyn was arrested and forcibly expelled from the U.S.S.R. before the 35-nation 1975 accord, but since then other writers like Andrei Amalrik and Vladimir Bukovsky have been encouraged to leave. Solzhenitsyn, it may be added, particularly offended the authorities by denouncing Stalin's "gulag" brutality which the present Politburo also criticizes.

One thing notable about the Helsinki declaration, endorsed by Leonid Brezhnev, was this pledge: "The participating states note the expansion in the dissemination of information broadcast by radio and express the hope for the continuation of this process."

Nevertheless, the United States Commis-

sion on Security and Cooperation in Europe reports the U.S.S.R. and its allies still jam foreign broadcasts such as those from American-sponsored Radio Liberty and Radio Free Europe and a "Warsaw Pact propaganda barrage against these radios has continued incessantly since the early part of 1976."

Radio Liberty and Radio Free Europe were once financed by the C.I.A. but this is no longer true. They are openly sponsored by a public group called the Board of International Broadcasting. David Abshire, chairman of this board, told the Senate Foreign Relations Committee last year: "Instead of ceasing jamming in the spirit of Helsinki, the Soviet authorities have launched a violent new propaganda campaign against these radios." There is also frequent jamming from Czechoslovakia, Bulgaria and Poland.

The Voice of America, which gives the official United States view, is not subjected to similar blockage. But Radio Liberty (in 19 languages spoken in the U.S.S.R.) and Radio Free Europe (in six languages) seek to serve as a substitute for a free press that is locally muffied. They enable political exiles to speak to their fellow-countrymen.

Mr. Bukovsky, one of many distinguished Soviet writers and artists who fied abroad, said in Paris recently that these stations play "an enormous role" in keeping the Warsaw Pact peoples informed about what is really happening. The cost of jamming intrusive broadcasts is immense. There are up to 3,000 jamming transmitters in the Soviet Union, which is said to spend more than six times as much on blocking foreign programs as on spreading its own radio propaganda.

Mr. Abshire's board has done what it can to keep up financial support for Liberty and Free Europe operations based in Munich. It just arranged a contract with Lisbon enabling broadcasts to continue from Portuguese facilities for fifteen years. A Presidential panel in Washington urges there should be an increase of such American broadcasts.

No authoritarian government is overjoyed when its exiles find means of expressing antipathetic opinions from abroad. But that is not to say they don't have a right to do this. Apart from its own Constitution and its acceptance of the Helsinki pledges, the Soviet Union is a signatory of the Montreaux International Telecommunications Convention and the Universal Declaration of Human Rights.

The former says: "All stations, whatever their purpose, must be established and operated in such a manner as not to cause harmful interference to radio services or communications of other members or associate members." The latter stipulates: "Everyone has the right of freedom of opinion and expression. This right includes freedom to . . . impart information and ideas through any media and without regard to frontiers."

Any American who wishes can listen to Moscow's dreary radio broadcasts in English (or any other language) although their ideological persuasiveness may be doubted. And, theoretically, if some famous American writer or painter or musician wanted to settle in the U.S.S.R. and make denunciatory speeches about us, he would have every right to do so.

But to protest the reverse—or, what is worse, to try to prevent it by jamming—not only controverts the Kremlin's pledged word but puts it in the silly position of the pot calling the kettle black.

[From New Europe, European Movement Quarterly, London, No. 1, 1977] INTERNATIONAL BROADCASTING: A NEW DIMENSION OF WESTERN DIPLOMACY

(By David M. Abshire)

'A newspaper without paper and without boundaries.' This is how Lenin described radio in 1922. And it is precisely these characteristics of international broadcasting that have so angered his successors and that have given it an importance for many millions in Eastern Europe that it is difficult if not impossible for us in Western Europe to understand. For, as David Abshire—a former US Assistant Secretary of State—points out, unlike all other media of communication, it cannot be stopped at frontiers. 'It comes into a listener's home always as an invited guest admitted or rejected by the turn of a dial; and it cannot be selectively edited or censored by an individual.'

Throughout the cold war era, these broadcasts had a major significance for audiences throughout Eastern Europe, especially when the domestic media interpreted events in ways that had little if no connection with the real world. So influential were they that for most of the post war period, the Soviet Union and its satellites tried to obliterate them with a massive and enormously expensive jamming system.

Even before Helsinki, the Warsaw Pact countries had ended the bulk of this jamming of the major 'official' stations—the Voice of America, Deutsche Welle, and of course, the BBC. And although the Helsin'i declaration did not specifically mention jamming, Abshire argues that, to the Western participants, the final act implies that all jamming of broadcasts should cease.

In spite of this, Abshire believes that international broadcasting continues in post-Helsinki Europe to have a crucial importance Partly this is because all jamming has not ceased. On Radio Liberty, the American station based in Munich and broadcasting to the Soviet Union, and on Radio Free Europe, its sister station broadcasting to most other East European countries, it continues unabated.

More widely, Abshire claims that, although power is concentrated in relatively few people in the Soviet Union, their views and attitudes cannot be totally isolated from the public state of mind. The significance of international broadcasting is, in his view, that undistorted information serves—at the very least—to nourish pragmatic doubts tending to curb dogmatic decisions.

But having defined what he sees as the great importance of international broadcasting, Abshire declares his astonishment that so little effort and so few resources are devoted to it. He contrasts the huge amounts of money spent on the military deterrent with the failure to make a comparable effort to create a body of informed public opinion in Eastern Europe, without which deterrence must depend solely on the unfettered decisions of a few leaders.

So what should be done? The United States, in Abshire's view, needs to allocate much greater resources to international broadcasting. It must recognize that, as long as Soviet leaders insist that detente and coexistence mean intensifying the ideological struggle and tightening censorship, its broadcasts must openly and purposefully aim at bringing ideas and information to these closed societies.

Radio Liberty and Radio Free Europe should, he believes, continue to try and take the place of East European domestic radio services. The Voice of America should have more independence, along the lines of the BBC. There should be more exchange of technical facilities between international broadcasters such as the VOA and the BBC.

An increase of funds for American radio stations would also, he believes, encourage the British Parliament to give stronger financial support to the BBC's External Services which have, he says in a considerable understatement suffered 'a slightly downwards budgetary trend' over recent years, but which, on his evidence, are widely relied on throughout the world, particularly in times of crisis, as a source of accurate and depend-

able news. As Alexander Solzhenitsyn said on a recent visit to the BBC's External Services: "The BBC retains in the broadcasting world a significance similar to that which the British Empire earlier held in the world of politics."—Peter Udell.

CARTER'S ECONOMIC STIMULUS HIT

Mr. SCHMITT. Mr. President, our colleague, the distinguished Senator from North Carolina, Mr. Helms, is recognized as one of the Senate's best spokesmen for the free market economy. He is quick to point out the often overlooked liabilities of Government intervention.

As the Senate moves toward consideration of tax cuts and higher spending to stimulate the economy, it is a good idea to take a step back and look at the costs and benefits for each program we initiate as well as review the programs now in existence.

In the March 14, 1977, edition of the Journal of Commerce, Senator Helms voices strong criticism of the concept of economic stimulus and concludes that more of the kind of Government intervention we have had in the past will lead to the "Britainization of America."

To counter this trend, Senator Helms has proposed the Job Opportunities and Economic Reform Act of 1977. He offers his proposal to help begin the debate which is overdue. He states:

After 30 years of Keynesian economics we must assess the results—the Keynesians must defend them.

I believe he is right in calling for this debate it is important that the Senate seriously discuss rational economic policy and the direction in which we seem to be heading.

Mr. President, I ask unanimous consent that Senator Helms' article in the Journal of Commerce be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Journal of Commerce, Mar. 14, 1977]

A SENATE VIEW: CARTER'S ECONOMIC STIMULUS HIT

(By Senator Jesse Helms)

Ideas that are past their time often develop a mythology that keeps them alive long after it is clear that they are no longer functioning. The notion that an "economic stimulus" really stimulates the economy in a productive way is one of these.

President Carter's stimulus package, intended to cure unemployment, reminds me of the touching faith that doctors once put in blood-letting. The patients sometimes got better, but not because of the cure. And sometimes the patients were so weakened by the cure that they never recovered.

Our Keynesian economists—and their politician apprentices—may believe that they have performed a useful function. It is time, after 30 years, to assess the results.

Unless the American people begin to demand meaningful reform, we will continue down the road to big government, centralized decision-making, economic intervention, and the Britainization of America.

LEGISLATIVE PROPOSAL

As progress towards that reform, I have prepared a comprehensive, non-Keynesian legislative proposal. I call it the Job Oppor-

tunities and Economic Reform Act of 1977. Its very premise is enough to make some of my political colleagues take pause: it would set a policy of getting politics out of the economy when more harm than good results from government intervention.

The bill starts with an amendment to the Employment Act of 1946. This is that part of our current law which says that government promote "maximum employment, production, and purchasing power." In the abstract, this is a fine goal, but one that carries great potential costs and risks.

After all, everyone wants high levels of employment—but do we want them through a free and open market, or do we want them through government spending, government controls and high inflation? Do we want government growth that stifles economic freedom and economic growth? Do we want controls that can threaten the roots of our free society? Such side effects are the costs of an over-inflated, artificially stimulated economy.

SEEN COUNTERPRODUCTIVE

The Job Opportunities and Economic Reform Act which I have proposed states as federal policy that government intervention tends to be counterproductive, and that government should "avoid and reduce, whenever possible intervention in the economy."

Many Washington politicos, raised on Keynes and the gospel of electoral support through government largesse, would choke while swallowing that medicine. It would mean that politicians would be giving up their claims to economic omnipotence that Keynesian theory has granted them, and the political benefits as well. Such is the romance with Keynes that the typical Washington response to the failure of this patent economic medicine is to order a double dose.

The second portion of the bill follows from the first, and is an equally important component in any genuine reform measure: getting government out of the economy means adopting a balanced budget. I propose amending the Budget Act of 1974 to provide for a phase-in of a balanced budget over a four-year period. This is to minimize disruptions caused by rapid withdrawal of federal largesse.

My third proposal would phase out the power of the Federal Government to manipulate the value of money for political purposes. The achievement of a balanced budget, under the second part of this proposal, at last would permit a stable dollar value. The bill would remove the process of stabilizing the dollar from the hands of those who think they have political and economic omniscence, and link it to a value-free indicator—in short, it would use the price mechanism to establish, by 1984, a firm price relationship between dollars and gold.

This proposal utilizes a new, sophisticated pricing mechanism unlike the unrealistic and arbitrary price set by the old "gold standard." The high visibility of the link to gold would be an added social discipline, which would increase confidence in the stability of the dollar, and, in addition, increase the political costs of using monetary policy to stimulate the economy artificially.

No system is foolproof, or unchangeable. However, if, after taking on this commitment, the Federal Reserve Board chose to inflate the dollar for whatever reason, citizens would have a greater awareness of the action, and would be free to turn their dollars into the Treasury for gold.

Such action would indicate in a forceful and immediate way that people were losing confidence, and were seeking refuge from inflation. Such action would automatically tend to reduce the supply of money, and would place pressure on our government to reverse its inflationary policies.

Real economic reform must, therefore, in-

clude a recognition of the fact that money cannot be used to cover up foolish fiscal policies. It cannot be used to accomplish unrealistic social goals.

Money is the means of economic activity; the politicization of money can only lead to the disruption of economic activity and the

loss of freedom.

Freedom must be restored to individuals, so that each may engage in economic activity without having to guess how the political manipulation of currency values will affect his or her economic position. In essence, the burden of compliance must be shifted from the individual to the government—by forcing government to conform with monetary constraints, thereby freeing individuals by ceasing capricious government tinkering.

Finally, the fourth section of the bill attacks the unemployment problem by facing up to the fact that government itself is one of the biggest causes of joblessness, Government regulations impose increased costs on job creation. Government programs set up barriers that keep available jobs and the unemployed apart.

Government income maintenance systems provide incentives to stay out of the job market. Government tax laws set up incentives for capital-intensive expansion, but not for labor-intensive expansion. Government wage laws prevent some workers from offering their services to those who would hire them at a mutually agreeable price.

Therefore, the bill proposes establishing a Commission on Barriers to Employment to diagnose the costs and the extent of these barriers, so that Congress will have to face up to the fact that government—not those usually charged, our businessmen or unions—is a major cause of unemployment.

I have submitted the Job Opportunities and Economic Reform Act of 1977 so that we can begin a serious debate on real economic reform. We have gone beyond the point where Congress and the executive branch can throw money at the nation's economic problems and expect more good results than bad. We are past the time when this country can afford something like the Humphrey-Hawkins guaranteed jobs bill, which attempts to treat symptoms and not causes.

In full recognition of the political tone of the day, I do not expect approval of this bill in the near future. The U.S. Congress is far more likely, unfortunately, to adopt legislation which provides for more of what we have had in the past.

After 30 years of Keynesian economics, we must assess the results—and the Keynesians must defend them. The Job Opportunities and Economic Reform Act of 1977 is a reply to the economic policies of the past. It is based upon the view that we cannot attack any single one of our economic difficulties separately. Money, unemployment, growth, and stability are integral and they must be looked at in the same context.

We find ourselves moving, willy nilly, into the post-Keynesian age, and we must answer the economic problems of today.

NATIONAL BROADCASTERS HALL OF FAME

Mr. WILLIAMS. Mr. President, on Sunday, April 24, the city of Freehold, N.J., will be the scene of a unique dedication ceremony, when the National Broadcasters Hall of Fame will induct 21 broadcasting celebrities of the past and of the present.

The Hall will be opened to the public on May 1, 1977, and I ask unanimous

consent that the official announcement of that opening be printed in the RECORD.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

NATIONAL BROADCASTERS HALL OF FAME May will be Broadcasting Month.

It is both appropriate and significant that May 1 was selected as the opening date of The National Broadcasters Hall of Fame in Freehold. NJ.

The nation's newest Hall of Fame will pay tribute to the men and women who became

Celebrities through their voices.

This non-profit project is more than a museum of nostalgia. The Hall merges the broadcasting interests of entertainers, newscasters, inventors, investors, the executives, sponsors, hobbyists and listeners. More importantly The Hall of Fame will document the past and track today's achievements.

The National Broadcasters Hall of Fame was founded by Arthur S. Schreiber, a former New Jersey newspaper publisher. The project was in the planning stages for almost three years. It became a reality when a large bank, built before the turn of the century, became available. The Hall of Fame transformed the bank into a display hall, but preserved many of the beautiful architectural features of the building.

Pieces of broadcasting's past do exist. There are collections of equipment on display at many locations. Homes and laboratories of inventors are open to the public. Libraries are filled with books on broadcasting. Recording companies have compiled collections of early radio programs, and honors to those in the field today are distributed through a variety of professional organizations.

But nowhere had the past, the present and the future interest of the broadcasting industry been brought together in one location until The National Broadcasters Hall of Fame was established.

One of the purposes of The Hall is to preserve memorabilia. Another is to exhibit an extensive collection of equipment. A minitheatre offers visitors an original production recaping broadcasting's history. And a vast hall has been created with displays where visitors can see and hear broadcasting history. One section highlights the lives and contributions of personalities in the industry who have been inducted into The Hall of

The first induction ceremony will take place in Freehold on Sunday, April 24, with New Jersey Governor Brendan B. Byrne and Senator Harrison A. Williams, Jr., participating in the program.

The first inductees into The Hall of Fame are: Red Barber, Jack Benny, George Burns and Gracie Allen, Bing Crosby, Milton Cross, Arthur Godfrey, Bob Hope, Ted Husing, H. V. Kaltenborn, Kay Kyser, Guglielmo Marconi, Edward R. Murrow, William S. Paley, David Sarnoff, Kate Smith, Bill Stern, Lowell Thomas, Paul Whiteman, Walter Winchell, Harry Von Zell

They were chosen by ballots sent to every active broadcasting station in the United States.

APPOINTMENT OF CONFEREES TO H.R. 1828—EXCLUSION FOR SICK PAY

Mr. DOLE. Mr. President, earlier today the Senator from Louisiana requested a conference and appointed Senate conferees to work out minor differences between the House and Senate versions of H.R. 1828. I commend this action, as it paves the way for expeditious enactment of provisions eliminating the retroactive taxation of sick and disability pay. This is a step which I urged the Finance Committee to take in a letter sent yesterday to Senators Long and Curris.

I had hoped that this legislation would be enacted before the April 15 filing deadline and worked for such action since introducing S. 4 on the first day of the session. However, substantial relief can still be provided to over a million disabled retirees who will be able to file amended returns for 1976 taxes. The sentiment of House and Senate Members is clear on this issue, as evidenced by the unanimous votes in both bodies on the sick pay provision. As a conferee, I trust we will move quickly.

I ask unanimous consent that a statement placed in the April 18 issue of the Washington Post by the National Association of Retired Federal Employees be printed in the Record.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[An advertisement]

WHY TAKE IT OUT ON THE DISABLED?

AN APPEAL TO THE PRESIDENT AND MEMBERS OF
THE CONGRESS

This is not a matter of seeking special privilege. It's simply a matter of fair play. Last week thousands of sick and disabled Americans were forced to dig into their savings or go into debt to ante up additional 1976 Federal taxes to pay the price for what was, in effect, a game of political football. Here's how it happened.

Last October, 10 months into the 1976 tax year, you amended the tax code to drastically tighten the criteria for claiming disability income tax credit. Worst of all, you backdated this change to January 1, 1976. So what you did was to impose a retroactive tax liability amounting to hundreds, even thousands, of dollars on those taxpayers least able to absorb so sudden and crushing a financial blow.

Put yourself, if you can, in their position. You filed your estimated tax return for 1976 and were making your quarterly payments as the law requires. Then, two months before the tax year ends, you're stunned to learn that you're got to pay out an additional \$400, or \$900, or \$1,200 (plus a possible penalty) you hadn't planned on. Why? Because your government all of a sudden changed the rules on you, that's why. How would you react to such treatment?

Well, certain responsible members of the Congress were quick to recognize the obvious inequity in back-dating a tax bite of this magnitude on a group of handicapped citizens. Immediately after the 95th Congress convened, legislation was introduced—with numerous co-sponsors in the House and Senate—to make this tax change effective on January 1 of this year, 1977, rather than retroactive to the beginning of 1976. On April 4, a bill to do this passed the House by a vote of 404 to 0. Two days later, it passed the Senate by a vote of 80 to 0. There was no opposition at all to this simple measure to correct an obvious wrong.

So what's the problem? In the Senate, amendments having nothing to do with the basic issue were tacked onto the bill and it was sent back to the House where it was passed again, minus one of the Senate's

amendments. Back went the bill for final action by the Senate where in the floor debate, the Chairman of the Senate Finance Committee inferred that you, Mr. President, might veto the measure if it were passed in its amended form. Result? The bill was pigeonholed until after the Easter recess.

Somehow it seems our country's disabled rettrees were caught up in a game of political football, with back and forth maneuvers between the two houses of Congress involving issues which had nothing whatever to do with the plight-of the disabled rettrees, while you, Mr. President, neglected to take a firm stand on an issue of critical importance to

these people.

How do matters stand now? Well, April 15 was last Friday and there are a lot of individuals who are pretty unhappy with you, Mr. President, and you too, Mr. Congressman. Perhaps you've had some of their letters and phone calls. If you haven't, we've had lots of them so we can tell you what they're saying. They're pointing to the recent quantum jump in Congressional and executive level salaries and they're contrasting this with the government's tax treatment of the handicapped and the elderly. How the new tax bill messed up and diluted the provision for retirement income credit, for instance—and now this retroactive tax bite on the disabled retiree.

Our organization is the spokesman for the Federal Government's one million retired civil employees. About 280,000 of them are retired for disability reasons. Now that the Easter recess is over, how about correcting the injustice done to them and the more than 1 million other disability retirees throughout our country? You can do this by separating out this non-controversial matter of changing the effective date of the new disability income tax regulations from other controversial tax issues. You can enact and sign this provision into law, by itself, as it was originally introduced and passed by both the House and the Senate—without a single dissenting vote!

Again, this is not a matter of seeking special privilege. It's simply a matter of fair

The National Association of Retired Federal Employees, 1533 New Hampshire Avenue, N.W., Washington, D.C. 20036, 202—234–0832

CARTER TO URGE FINANCIAL, OTHER INCENTIVES FOR INDUS-TRIES TO PRODUCE OWN ELEC-TRICITY

Mr. HART. Mr. President, last night President Carter addressed the Nation regarding our very real crisis in energy supplies. I strongly agree with the President that the cornerstone of any comprehensive energy policy must be conservation. As the President mentioned, conservation is the quickest, cheapest, most practical source of energy. Effective conservation programs will insure both continued economic health and continued progress toward a pollution-free environment for our children.

A vital ingredient of any effective conservation policy must be the recovery and utilization of waste heat. And the greatest energy producing practice for recovering and using waste heat is a relatively simple process called cogeneration.

Cogeneration produces electricity from the steam heat which many industries require to produce their products, and it is widely used in several countries. Several studies have shown that 30 percent of the total electricity consumption in this Nation can be produced through cogeneration by the year 2000, at threefourths of the fuel cost of the most efficient utility.

The ramifications of cogeneration as an effective fuel conservation measure are both obvious and enormous. Industrial cogeneration of electricity and steam must be encouraged as rapidly and as vigorously as possible. But we must also insure that each decision to speed up cogeneration is taken with thought and attention to detail.

Mr. President, tomorrow I intend to introduce legislation addressing cogeneration and waste heat utilization in detail. It is my hope that we will move on this urgent measure as quickly, and deliber-

ately, as possible.

In the meantime, I would like to again direct the attention of my colleagues to an article on energy conservation by Dr. Lee Schipper which was printed in yesterday's Record on page 11055 at the request of Senator Humphrey. Dr. Schipper correctly points out that there is no longer any reason for the Nation to ignore the unlimited energy resources which at present simply float up smokestacks into the sky in the form of waste steam.

Our Nation's scientific and industrial committees point to cogeneration as one of the least painful and most effective energy conservation practices. The Carter administration is also developing proposals to rapidly implement cogeneration practices nationwide. An interesting article appeared in last Friday's Wall Street Journal by Mr. Les Gapay regarding the administration's thoughts on cogeneration. I understand that the proposals described by the article may not be in total accord with the more detailed administration cogeneration proposal on its way to the Congress, but the article is well worth reading.

Mr. President, I ask unanimous consent that the article entitled "Carter To Urge Financial, Other Incentives For Industries To Produce Own Electricity" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Wall Street Journal, Apr. 15, 1977]
CARTER TO URGE FINANCIAL, OTHER INCENTIVES FOR INDUSTRIES TO PRODUCE OWN
ELECTRICITY

(By Les Gapay)

Washington.—President Carter plans to propose financial and other incentives for large industries to generate their own electricity.

The proposal would be a boon to such major industries as chemicals and steel. The policy also would have important implications for the electric utilities, as it would result in a need for fewer central power plants in the future.

The incentives would go to large factories that have steam boilers, enabling them to add electrical-generation equipment, With this equipment, the steam could be used to turn a turbine that would produce electricity for the factories, which could then sell excess electricity to utilities.

Currently, many companies have equipment to produce steam for their own use, mainly in various industrial processes and in heating. Electrical-generating equipment could be added to these steam boilers at rellatively little extra cost, experts claim. The process is called cogeneration, as the same system would produce both steam and electricity.

Mr. Carter's expected proposals, according to administration sources, would call for legislation to give industries tax credits for the installation of cogeneration equipment and to require utilities to buy the surplus power.

Carter administration energy officials estimate that within 10 years industrial cogeneration could be saving the U.S. the equivalent of a half-million to a million barrels of oil per day. A study of Dow Chemical Co. estimates that the savings within a decade at 680,000 barrels a day, or about 10% of the nation's oil imports.

The Dow Chemical study, made for the National Science Foundation in conjunction with the Michigan Public Service Commission and the University of Michigan, also estimates that cogeneration would cut utility spending on power plants by between \$2 billion and \$5 billion a year.

A Federal Energy Administration study agrees that industrial cogeneration could affect significantly the electric utility industry. The FEA study says increases in the costs of electricity in recent years have "increased the benefits realizable from cogeneration." However, there are still some financial and regulatory barriers, and Mr. Carter's proposals would remove those.

According to a White House document on President Carter's comprehensive energy plan, to be released next week, the President will propose that a tax credit of 10% (in addition to the existing investment-tax credit of the same amount) to be allowed for industrial cogeneration equipment that meets specific efficiency requirements.

EXEMPTIONS ON OIL, GAS USE

In addition, Mr. Carter would propose that the government be authorized to exempt, on a case-by-case basis, industrial electric-steam cogenerating equipment from proposed bans on industrial use of oil and natural gas. Mr. Carter, as reported previously, will propose that the use of oil and gas by industrial boilers be phased out, the aim being to encourage use of coal.

The President's policy would require utilities to buy any surplus electricity made by industries. Normally, industries would propose to utilities that they construct and operate cogeneration facilities on mutually agreeable terms. However, if a utility weren't willing, and an industry built and operated its own cogeneration plant, it could sell any surplus power to utilities.

The power would be used in the utility's grid system and sold to other customers. Cogeneration facilities are more economical if they are large enough to make surplus power that could be sold.

Utilities especially would oppose being forced to buy such power. "That's what we're afraid of," says an official of the Edison Electric Institute, an industry trade group: "Their surplus power probably would be generally available when we have surpluses."

COULD BUY BACKUP POWER

Mr. Carter's proposal would allow industries to buy backup power supplies from utilities, if needed, at nondiscriminatory rates. In addition, the industrial facilities would be exempt from state and federal public utility regulation. Also, industries would be granted distribution privileges on utility-transmission networks to sell surplus power and to buy backup power.

CXXIII---706-Part 9

Industries that use a lot of steam would be likely to benefit from adding electric generation. Officials say likely beneficiaries are the chemical, steel, oil-refining and paper-

and-pulp industries.

Cogeneration of electricity and steam is widely used in Europe, especially in West Germany. At one time, most U.S. industrial plants generated their own electricity, but this began to decline steadily in the early part of this century when power was cheap. Now, says Gerald L. Decker, corporate energy manager for Dow Chemical, "with the inevitable higher fuel costs ahead and the restricted availability of capital for electric utilities, we may be approaching a period in which industrial management will look more favorably on cogeneration."

Consumer groups have long advocated such processes. "Residential electric rates would be less if cogeneration was widespread," says Garry DeLoss, energy specialist for Ralph Nader's Public Interest Research Group. He says that lower rates could result because industry capital costs would be less for cogeneration equipment than if utilities built more central plants, and because the cheaper surplus industrial electricity would

be sold to consumers.

As previously reported, the main thrust of the Carter energy package involves increasing the federal gasoline tax, imposing new taxes on domestically produced crude oil and on cars that use too much fuel, and raising the price of natural gas.

Yesterday, sources said the package also is

likely to include proposals to:

Double the size of the federal oil stockpile to one billion barrels by the end of 1983 from the 500 million barrels required by law. The oil reserve is intended to cushion against any future foreign oil embargoes.

Remove the existing 10% excise tax on new commercial intercity buses. The aim would be to encourage expansion of bus systems, because they are fuel-efficient carriers of passengers.

Boost the federal tax on fuel used in general aviation to 11 cents a gallon from the existing seven cents a gallon. The existing rebate of two cents a gallon to users of motorboat fuel would be eliminated, so they would have to pay the full four-cents-a-gallon tax.

THE SEMANTIC WAR IN THE MIDEAST

Mr. HEINZ. Mr. President, the Philadelphia Inquirer recently published an editorial containing some cogent comments about the diplomatic situation in the Middle East and the war of words we are currently witnessing. In the world of diplomacy things are not always what them seem, and we are all learning that, as in "Alice in Wonderland," words mean just what the person speaking them wants them to mean, no more, no less. "Secure borders," "defensible borders," "defense lines," and "permanent and recognized borders" all have different meanings depending on the context and the intent of the person using them.

Despite these verbal ambiguities, however, what should be clear, as the editorial points out, are our objectives, as articulated by President Carter: termination of belligerence toward Israel by her neighbors, a recognition of Israel's right to exist, the right to exist in peace, the opening up of borders with free trade, tourist travel, cultural exchange between Israel and her neighbors." The apparent unwillingness of the Arab nations to move in this direction may be masked by their words, but the basic issue is a simple one, and we must renew our determination to adhere to our own objectives. I ask unanimous consent that the editorial be printed in

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

(From the Philadelphia Inquirer, Mar. 15, 1977]

THE CRUX IN THE MIDEAST IS PEACE, NOT SEMANTICS

Everyone knows that if an ultimate peace settlement is to be achieved in the Mideast there will have to be some rectification of the pre-1967 borders between Israel and its Arab neighbors.

We say "rectification" because it is the most neutral word we can find for something which, after all, is not unheard of after wars. The Israelis prefer the term, "defensible borders," by which they mean they do not intend, insofar as is possible for such a small country as theirs, to leave themselves defenseless against another surprise attack like that launched on Yom Kippur, 1973, by Egypt and Syria.

The Arabs insist on saying "secure borders," by which they apparently mean insecure borders. When President Carter, after conferring in Washington with Israeli Prime Minister Yitzhak Rabin, himself used the word, "defensible," the Arabs took prompt

umbrage.

Obviously responding to Mr. Carter in a speech to the Palestine National Congress meeting in Cairo, Egyptian President Anwar el-Sadat even ruled out the word "secure" as "not permissible" to speak about:

"Allow me to repeat to you, and for all to hear, that we will not cede a single inch of Arab land and that our national territory is not open to bargaining; the Israelis must

withdraw from all occupied lands."

If Mr. Sadat means what he says, there is not much room for bargaining. Does he intend to go to Geneva demanding everything and conceding nothing, including the peace which he has repeatedly said must be left to future generations?

Meanwhile, at the Cairo meeting, the Palestine Liberation Organization refused to consider changing its charter, which in effect calls for the destruction of the Jewish state. In other words, the PLO demands that its rights to statehood be recognized while refusing to recognize Israel's right to exist."

In his news conference the other day, Mr. Carter said the difference between "defensible" and "secure" is "just semantics." He went on to say that stabilization of the situation would entail "substantial withdrawal" of Israel from territories occupied since 1967.

That, and his use of the phrase, "minor adjustments" of boundaries, did not enchant the Israelis, but they themselves have never taken the position that they must forever control every single inch of occupied land.

On the contrary, they are well aware that they must make substantial concessions, and Mr. Carter, in drawing a distinction between Israel "defense lines" and "permanent and recognized borders," has offered a novel approach by which each side can get substantially what it wants-for Israel, security; for the Arabs, most of the occupied land.

The crux of the problem, though, is as Mr. Carter stated it: "I think that what Israel would like to have—a termination of belligerence toward Israel by her neighbors, a rec ognition of Israel's right to exist, the right to exist in peace, the opening up of borders with free trade, tourist travel, cultural exchange between Israel and her neighbors."

The Arabs do not have to arrive there immediately, but if they are willing to move in that direction the matter of border rectification can be worked out. It is just that simple, or just that complicated.

ARTHUR BURNS PROPOSES NINE-POINT PROGRAM ON WORLD **ECONOMY**

Mr. HUMPHREY. Mr. President, I read with great interest the Associated Press report of a nine-point program outlined by Dr. Arthur F. Burns, Chairman of the Federal Reserve Board. This program was designed to cope with what Dr. Burns calls "the formidable chal-lenges that now confront us" in the world economy. His proposals make good sense and represent the basic outline of a responsible international economic policy. I ask unanimous consent that the Associated Press article of April 13, 1977, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

BURNS URGES STRINGENT CONSERVATION

New York.-Arthur F. Burns, chairman of the Federal Reserve Board, proposed coping with "the formidable challenges that now confront us" in the world economy with a nine-point program that includes a strinconservation effort by oil importing

Burns also urged a greater reliance on lending through international organizations.

Underdeveloped countries have been borrowing heavily from commercial banks to pay their oil bills and other import costs, prompting officials such as Burns to question how long the situation can continue.

And Burns said he is becoming less confident of earlier assessments that the debts run up to pay for imported oil will be self-

correcting.
Here are Burns' nine points:

"All countries and especially the United States need to adopt stringent oil conserva tion policies and, wherever possible, speed the development of new energy sources." The members of OPEC must avoid new

price increases to make up for any reduced consumption. OPEC members also need to play a bigger role in helping underdeveloped

Nations running surpluses in international payments should let the values of their currencies rise, thus giving their deficit-account trading partners a competitive edge. He named no nations, but U.S. officials have usually targeted Japan and West Germany for such admonitions.

Resources of the IMF should be enlarged along the lines of a current proposal for a new \$15-billion lending facility, with "new assertiveness" by the IMF in getting additional fiscal and monetary restraint concessions from borrowers.

banks and Commercial governments should avoid undercutting the IMF's influence.

Lenders should improve their method for assessing nations' credit worthiness,

Commercial and investment bankers must keep a close watch on their international

"Protectionist policies need to be shunned by all countries."

Countries running an international payments deficit must adopt effective domestic stabilization policies.

INSTITUTE OF INTERNATIONAL ED-UCATION CELEBRATES 25TH YEAR OF SERVICE OF U.S. REGIONAL OFFICES

Mr. BENTSEN. Mr. President, the Institute of International Education, IIE, the largest and most active educational exchange agency in the United States, is celebrating the 25th anniversary of its U.S. regional offices. These offices serve all parts of the United States—counseling U.S. and foreign students, administering exchange programs, and serving local communities and educational institutions. IIE regional offices are located in Atlanta, Chicago, Denver, Houston, Los Angeles, San Francisco, and Washington, D.C. Their activities are coordinated by the Institute's national headquarters in New York City.

The coincidence of this anniversary with the annual meeting of the IIE Board of Trustees and National Council in Washington, D.C., offers me the opportunity to pay tribute to the notable work of this organization. IIE was founded in 1919 in the aftermath of World War I. Its assigned task was the promotion of international understandings through international educational exchange. Today IIE carries out this mission through the exchange of students and scholars, knowledge and skills between the United States and 126 countries.

IIE is perhaps best known for its role in the administration of the Department of State's mutual educational exchange-Fulbright-Hays—program of international fellowships for U.S. and foreign students at the predoctoral level. However, the Institute of International Education also conducts some 290 additional programs for other U.S. Government agencies, foreign governments, international organizations, foundations, corporations, and educational institutions. Altogether IIE assisted some 11,500 American and foreign students, distinguished international visitors, and research professionals on technical assistance projects overseas during the 1976 academic year-a notable record for a private nonprofit agency and a major contribution the development of international to understanding.

In addition to its role in the mutual educational exchange program of the Bureau of Educational and Cultural Affairs of the Department of State, IIE also administers a portion of the Bureau's international visitors program, which brings distinguished foreign visitors to the United States from over 100 nations each year. The intent of the program is to increase the knowledge of the United States of influential citizens of other lands. Alumni of the program currently occupy over 250 cabinet positions around the world.

IIE also assists the "Green Revolution" centers, the 10 international agricultural research centers around the world that have developed the miracle grains which hold the best hope of adequate food supplies for the less-developed nations. The Institute administers many professional development and technical cooperation programs for the Ford Foundation, and is active as well on behalf of the Agency

for International Development, the Rockefeller Foundation, and numerous other supporters of educational cooperation and of developmental assistance.

By administering programs for sponsors, HE is able to make a major impact on international relations through education and research.

IIE also serves the public and American higher education through its educational services. IIE educational services are public service activities supported through contributions. Through educational services, IIE brings information and counseling to some 200,000 American and foreign students each year and provides over 50,000 copies of its many publications to students, educational institutions, counseling centers, and libraries all over the world.

IIE's educational services include conference programs, scholarship programs, and many other activities that bring needed assistance to organizations and individuals concerned with international educational exchange. As the central clearinghouse for information about exchange in the United States, the Institute of International Education plays an important role in making productive educational relationships a reality.

IIE has a special relationship with American colleges and universities, some 500 of which are affiliated with the Institute as IIE Educational Associates. IIE assists American higher education in many ways.

The Institute's overseas offices in Latin America, Africa, and Asia provide onthe-scene assistance in interviewing and screening applicants overseas for American colleges and universities. Overseas offices provide information on U.S. higher education to tens of thousands of foreign students each year. They offer orientation programs, testing facilities, libraries, and catalog collections, and in general act as overseas ambassadors for American higher education.

IIE's regional offices in the United States play a similar ambassadorial role, linking local communities with the larger world through the medium of international exchange. They focus much of their effort on assisting American colleges and universities, and work closely with campus study abroad advisers, foreign student advisers, admissions officers, and with the individual student.

Colleges and universities call upon the IIE regional office in their area for advice and consultation about international education. The range of IIE publications and information services is made available to them, as are special student programs.

The IIE office in my own State of Texas exemplifies the public service role played by this organization throughout the United States.

Last year IIE/Houston supervised the academic programs of over 1,000 international students at colleges and universities in Texas and several Southern States. It organized special programs for students and for colleges and universities in the region, including a special learning mission for campus personnel to Latin America. It provided information

and counseling to 5,000 men and women considering international study.

The Institute's Houston office serves as secretariat for the Houston International Service Committee, and in this capacity acted as international host agency for the city in arranging programs for some 1,000 distinguished international visitors. The office also acts as protocol office for the city of Houston, and assisted with the visits of the King of Sweden and the Presidents of Egypt, France, and the Sudan during the Bicentennial Year. The Institute also served the community by sponsoring conferences on world trade, foreign policy and people-to-people relations.

The Institute's Houston office exemplifies the role played by the Institute of International Education across the United States. The offices in Atlanta, Chicago, Denver, Los Angeles, San Francisco, and Washington, D.C., and the national headquarters in New York City play similarly positive roles in serving the student, the educator and the community.

The Institute of International Education, its staff in 11 offices in the United States and around the world, and the thousands of volunteers who give of their time and energy on behalf of interna-

tional cooperation together form a significant national asset.

It gives me special pleasure to salute the Institute of International Education on the 25th anniversary of its national office network, and to express the hope that this fine organization will continue its tradition of effective service to the Nation and the world for many years to come.

HEARINGS ON PUBLIC LAW 480

Mr. HUMPHREY. Mr. President, I wish to share with the Senate some of the testimony presented by witnesses testifying on the Public Law 480 program on April 4, 1977, before the Senate Subcommittee on Foreign Agricultural Policy, on which I serve as chairman.

The two witnesses whose statements I would like to discuss were Herbert J. Waters and Robbin S. Johnson. Mr. Waters, president of TADCO Enterprises, Inc., is an individual with significant experience in both the public and private sectors. Mr. Johnson is an assistant vice president with Cargill, Inc., an international commodity processing and marketing company headquartered in Minnetonka, Minn.

The purpose of this hearing was to explore in greater detail the issues that the Committee on Agriculture, Nutrition, and Forestry face in continuing the Public Law 480 program. These two witnesses gave different yet complementary testimony. Their contribution was designed to maximize the potential of Public Law 480 as a program with maximum humanitarian and developmental impact on poor people in less developed countries.

Mr. Waters' comments emphasized the need to alter the Public Law 480 program in a number of respects. He would like to see part of the sales under this program reserved or set aside for producer-controlled cooperatives and other small exporters. He also would like to see countries which buy Public Law 480 commodities on long-term credit arrangements use the food to foster socially desirable purposes such as nutrition programs rather than just for commercial resale. Further, Mr. Waters urged that recipient countries use Public Law 480 commodities to establish and maintain reserves that will help protect them against factors such as adverse crop conditions.

Mr. Johnson outlined a food aid strategy, describing roles that Public Law 480 could play in such an approach. First, Public Law 480 commodities can cover chronic food deficits. Second, Public Law 480 food can be used to cover periodic fluctuations in food aid requirements. Also, Mr. Johnson pointed out that Public Law 480 food can be used to encourage economic development, reduce population growth, and increase employment. Mr. Johnson stressed that conflicts between commercial demands and food aid commitments can be avoided through improved commodity management and trade policies.

These two witnesses have made a strong contribution to the discussion of Public Law 480. Mr. President, I ask unanimous consent that the statements of Mr. Waters and Mr. Johnson be printed in the Record.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

TESTIMONY OF HERBERT J. WATERS

Mr. Chairman: I appreciate being invited to participate in these oversight hearings on the Food for Peace Program (PL-480). You are to be commended for calling them. In my opinion, such oversight hearings should be conducted every year, regardless of whether or not reauthorization of the Agricultural Trade Development and Assistant Act is required.

The legislation is broad in concept and designed to serve varying purposes, sometimes seemingly in conflict with each other. They need not be, with proper administration and guidance from Congress as to priority of objectives. Because of this, continuing oversight by the Congress is not only wise but necessary to avoid administrative distortions of Congressional intent, and continuity of understanding by the Congress of the changing nature of the world's agricultural situation which significantly influences and will continue to influence the Future of Food Aid, the theme of your hearings.

I speak as an individual, but an individual with considerable background experience in this program. I am also President of the American Freedom from Hunger Foundation which has a vital interest in this program, but I choose to appear as an individual today for maximum freedom of expression about the program. Perhaps for the record I should qualify myself as having considerable background knowledge and experience with the program, and personal dedication to it. One way or another. I have been involved with it since its inception.

It was my privilege to be associated with the Chairman of this Subcommittee (Senator Humphrey) at the time the original concept was developed, with strong bipartisan support. I was directly involved in its original passage, and earliest reviews and refinements. During the 1960s I accepted appointments in the Executive Branch under both Presidents Kennedy and Johnson that included,

among other functions, major administrative responsibilities for operation of the Food for Peace programs overseas. Since my retirement from Government in 1968, I have continued my very close interest, and direct involvement, in functioning of the program, both in a civic capacity as President of the American Freedom from Hunger Foundation, and during the World Food Conference of 1974, Chairman of the World Hunger Action Coalition composed of more than 75 non-profit public interest voluntary groups in the United States; and as a private businessman engaged in international food and agricultural trade and development.

As a result, I have the unique ability, perhaps, to look at the program with a very broad perspective, not only over the span of 25 years of its existance but more importantly from experience with it in both the legislative and executive branches of government, and in the voluntary agency and private enterprise areas of nongovernment.

With that background for the record, I would like to make some general observations then proceed to some specific ideas in the form of suggestions to consider.

PROGRAM BACKGROUND

Public Law 480, from its inception and through its multiple revisions and refinements, and despite all its critics, has been a tremendously significant legislative accomplishment that has had more than two decades of profound impact for the good on international economic development as well as on American agriculture itself, and I see no conflict between those two goals as I am convinced we cannot succeed in one without sharing equal concern for the other.

Perhaps I can explain by putting into better perspective the real original concept of this program. For too long it was interpreted, and sometimes today is still misinterpreted, as a "surplus disposal program." True, the only way we could get the support of Congress to enact the program originally was to play heavily upon the excessive accumulation of U.S. food production that had become price-depressing to American agriculture, burdensome to the taxpayer, and a whipping boy of the media. For years PL-480 was only referred to in the press as the "surplus disposal act"; yet I respectively refer all historians to the Act itself, wherein were set forth far more constructive purposes. It was to share our productive capacity; to share something we had plenty of, with those unable to otherwise buy it; it was to make use of our productive capacity for constructive purpose of helping others, rather than turning it off while others went hungry.

In the minds of many of its original sponsors—men in both political parties dedicated to American agriculture, and men from rural constituencies—yet men who were internationalist at heart, who saw the growing problems of the world around us—was concern for how America could shoulder its rightful responsibilities of building a better world elsewhere when we were confronted with serious economic problems at home, among our own farm people; a concern not far different from the situation that exists today with our own unemployment and low farm prices.

They knew that, in the long run, America's future lay not in turning inward, but in helping others to progress; they knew that we ourselves would never be a big enough market for all we could produce, either on our farms or in our factories, and that our future markets were linked to economic development of the then underdeveloped world.

They had the foresight to realize that our own political security rested not just on military might, but rather on the extension of the American heritage of freedom, compassion, and human justice. They recognized that a world of poor and the deprived would come to resent a country of wealth and abundance, unless we showed a willingness to share and help others help themselves. Yet they knew rural America would not support "foreign aid" per se if they thought of it just in terms of transferring dollars from our economy to others. They had the wisdom to see that farm people, basically humanitarian and religious people, would respond better to sharing their own productive capacity, and eventually with it sharing their own technology. It was a matter of using what America could provide best—food, and the ability to produce food.

As a result Public Law 480 has not only helped meet world food needs, it has helped stir international interest in America's rural areas, and is probably largely responsible for us being able to sustain and maintain our entire economic assistance program.

It hasn't been just "surplus disposal"; it has truly been a proper sharing of America's abundance, and its capacity to produce—and brought with it the support of the producers for foreign economic assistance.

From its inception many of those most dedicated to Public Law 480 have sought to get rid of the old "surplus disposal" image, and to strengthen its acceptance as an effective instrument for development, as well as for humanitarian assistance and nutritional help to enable countries to help themselves. We took specific legislative action to redirect the program in that direction during the mid 1960s and steady progress has been made ever since.

ADMINISTRATION

The Food for Peace program always has had, and probably should continue to have, multiple purposes. There is nothing wrong with that as long as some purposes are not distorted at the expense of others. The multiple purposes do lead to some misunderstandings, as the program often means different things to different groups of people. It sometimes leads to misinterpretations in the media. The multiple purposes have the advantage of maintaining a broad base of support from many different sources, often admittedly for different reasons, but all combining for the general good of total national objectives.

The disadvantage of its multiple purposes is the fragmented bases all involved in its administration: USDA from agriculture's standpoint; AID from the standpoint of development; State from the standpoint of foreign policy guidance; Treasury from the credit viewpoint as well as allocation of foreign currencies involved; Office of Management and Budget from the standpoint of over-all budget control; and even within these agencies there is often much further fragmentation of interest claims.

It should be little wonder, then, that the program frequently bogs down in administrative nitpicking and red tape. Each of the agencies involved has its own interests it seeks to further, legitimately, perhaps, but too frequently time consuming, confusing, and self-defeating.

What too often appears lacking is adequate over-all policy guidance, streamlined decision-making mechanisms, and a dedication to the noble concepts rather than pre-occupation with petty internal rivalries among bureaucrats.

In other words, many of the problems of Food for Peace are not legislative; they are administrative. Broad enough authority now exists within the Act to well serve each of its objectives, if there is Administrative dedication to achieving them.

Your oversight, therefore, should more often concentrate on Administration of the program rather than just reviewing proposed legislative changes.

SUGGESTIONS AND RECOMMENDATIONS

Title I, long-term concessional credit sales: 1. Country Selection Criteria: Because of past distortions of original intent of the program to over-use its resources for international political purposes, Congress mandated a fixed percentage of Title I for the "poorest of the poor" countries. The re-direction was needed at the time. However, if confidence can be restored in Administration of the program along lines Congress recommends a valid case can be made for administrative flexibility rather than a rigid formula that sometimes creates problems without always advancing the objective sought to the best interest of the program. Whatever criteria is established, however, some provision should be made for taking into account the constructive use to which the food assistance resources are put in the recipient country. For example, a country may qualify in the "poor" category, yet not devote its food assistance to the benefit of the "poorest of the poor" people within that country as does some other country which for one reason or another ranks just above the "poor" country cutoff point.

An example might be Jamaica, which has had a small Title I program from which it obtains only nutritionally-selected high protein products, and devotes them entirely to social programs for school feeding and maternal health care programs, rather than commercial resale. In effect, it has "graduated upward" from what would normally be a Title II program to the Title I purchases, but uses the resources entirely for the nutritional benefit of its children. It seems to me more examples of this could be encouraged under Title I. if such use bolstered a country's priority for food aid. As it stands now, we really have just two categories of Title I programs: for the "poorest" countries, and for political supporting assistance, both involving commercial resale of the product to those able to buy. Perhaps we need a third category, of Title I sales to countries actually using the products for such socially-desirable purposes where it is channeled most directly to those needing it the most, rather than just ordinary commercial markets.

2. Incentives to up-grade nutrition benefit: Contrary to the Jamaica example, most Title I sales are non-processed farm products like wheat, corn, and rice. As a result Title I food assistance lacks the nutritional emphasis of Title II food donations.

To further encourage the sales of blended or protein-fortified foods, two years ago this Committee included a new provision of section 103 of PL 480 that would authorize the President to waive that portion of total value of a loan made under the authority of Title I which represents the actual and direct cost of processing such commodities. The Committee declared its intention that such procedure be made available only for those processed commodities which are used under Title II programs and which by their special nature are designed to meet specific nutritional needs of the developing countries. The justification for such a procedure then given was to better achieve the objectives of the Act related to improving the nutritional status of the neediest individuals in the developing world.

Unfortunately, this provision was lost in conference. We believe it should be restored. It would encourage transition in some countries presently receiving such commodities under Title II donations to sales of those commodities under Title II, and eventually on a regular commercial basis. Regrettably, some producer groups have not appreciated that it is in their interest, as well as the processors, to stimulate export markets for these new low-cost high protein blended foods developed in this country as a result of this legislation. We believe such producers are wrong, and missing a chance for an added

export market beyond export of grain as

3. Expanding sales participation: One of the criticisms frequently heard about Title I sales is that for the most part they are handled by a relatively few major international grain traders dominating the grain business. The intent of Congress in establishing credit programs to expand exports is to benefit farmers, not just grain traders. Why shouldn't they be more specifically oriented to financing exports by Producer-controlled groups, so producers share more directly in the benefits of such exports? Our major grain cooperatives are showing a greater interest in exporting directly. So are many of our country elevator operators, banding together to explore forming export groups which, relatively, would fall into a small business category. In both instances the impact of export sales would relate more directly to producers. and likely bring some healthy competition for grain into the export buying market. I believe this trend can and should be encouraged by Public Law 480.

We enter into government-to-government agreements extending long-term credit, under certain specified conditions spelled out by Congress. The recipient government does its own buying, under regulations set forth by USDA. Why should other countries have to buy only through a few major multinational grain traders, now dominating this Public Law 480 business? Why can't at least a portion of this business be specifically set aside, by law or regulation, for either producer-controlled exporters or small-business exporters more directly related to rural producing

areas?

There is ample precedent for Congress to require that producers share more directly in a program intended to benefit them, not grain traders.

In other government procurement, provision is made for small business "set-asides" to keep a few major big companies from gobbling up all government-financed business. Why not in Public Law 480?

In Public Law 480 itself, the law now requires that 50 percent of the cargo purchases be moved on American flag shipping, even if it costs more than on foreign flag. It even provides for paying the difference in that shipping cost, to avoid penalizing the receiving country in carrying out a U.S. objective.

Wouldn't it make just as much sense to require that 50 percent of the grain exported be sold directly by producer-controlled export cooperatives, or at least provide for a small-business set-aside that would encourage new exporters to compete for this business? The more people seeking to buy grain, the better it is for farmers. In my opinion, any government-financed export programs should be examined with this end in view.

4. Building Developing Country Stabilization Reserves: Most Title I agreements are tailored against the commercial absorptive capacity of a recipient country, without in-terfering with its usual marketing purchases outside of concessional food aid, given crop year. Perhaps more thought should be given, in years when the U.S. has excess available amounts of one commodity or another, to assisting developing countries to build up their own stabilization reserves to against adverse crop conditions in their own countries, sudden drastic cutbacks in future food aid in any given year, or even sharp international price fluctuations. In other words, the real objective of any worldwide food reserve system is to protect countries who may need food the most and be least able to compete for it in the market place in years of scarce supply, so why not shift some of the reserve carrying function to the countries the reserve is intended to serve? Of course, this can't work in all countries until adequate storage facilities are provided, but building adequate grain storage

facilities for such purposes could well be regarded as a constructive use of Title I local currency payments or even for the forgiveness of payment authorization in the Act.

Title II, food donations

While smaller in size, the Title II food donation program embodies most of what the public conceives the Food for Peace program to be—providing humanitarian people to-people assistance, getting food directly into the hands of people needing it the most through U.S. voluntary agencies, disaster relief, or contributions to the World Food Program of the FAO and United Nations. It most directly provides the nutritional emphasis and input of the Food for Peace program. It most directly is visible evidence of U.S. compassion and sharing. It most directly gets to the poorest of the poor.

It would be a mistake, however, to think that Title II food programs do not make a significant contribution to development. The Food-for-Work projects, Maternal-Child-Health projects, and school feeding programs all have a significant development impact and possibly could have even more impact if the Agency for International Development programmed more of its technical assistance and financial economic assistance into projects of which the food assistance was a direct component. Too often they are looked upon as entirely separate programs rather than being integrated as closely as they should. AID has a direct appropriated fund budget for nutrition, yet very little if any of that money is programmed in connection with actual food input in Food for Peace programs. Supporting food distribution with educational training support in nutrition makes sense; providing small tools and equipment for food for work projects makes sense. You can't achieve everything with food alone. and a mix of food and financial support is often necessary to develop sound projects and programs.

Present legislation is probably adequate for the Title II programs, but they could be improved considerably by changing administrative attitudes toward these programs and their significance. They are not just "giveaways"; they are the heart of food assistance to people, and can be essential to sound development programs.

Your Committee took the lead two years ago in trying to establish more continuity to these programs, fixing a minimum quantity of commodities to be distributed annually. Unfortunately, this became administratively determined as meaning a minimum quantity to be "programmed" rather than actually shipped, and there is always considerable slippage between programming and shipping of commodities. Perhaps this intent needs to be made clear to the Executive Branch.

Improved administration

Earlier I indicated administrative attitudes, rather than legislative restrictions, frequently determined how well or how poorly the PL 480 program served all of its objectives. I will now try to be more specific.

The new Administration, in consultation with the Congress, should up-date the executive order under which the program responsibilities are now carried out by various agencies. The Food for Peace program is still being administered under an executive order issued by President Eisenhower, back in the 1950s. Yet the direction and purposes and emphasis in the program has been changed frequently since then by the Congress. We negotiated such a new Executive Order in the 1960s, but it was never signed.

The ad hoc way that has evolved to administer this program has worked, but it has its shortcomings; it leaves too many decisions at too low a level. Interagency staff mechanisms have evolved that work, but there is no real policy-level mechanism to

match it where an agency could carry an appeal from the staff level coordinating mechanisms.

The Agency for International Development has gradually awakened to the significance of this program to its over-all objectives, yet it has devoted and still devotes too little of its own resources in staff and monetary support to back up a program for which all commodity and shipping costs are paid by USDA.

In many countries the food assistance available as a resource is greater than the financial resources available as part of an over-all economic assistance package; yet the staff devoted to programing and administering the food assistance is miniscule as compared to administrative resources used for AID's programs under direct appropriations. Food is a valuable resource, and should be used as wisely as money to achieve the maximum benefits.

I suggest this Committee remind AID of the resources it is getting from USDA, and call upon it to provide more adequate staffing of Food for Peace officers in overseas AID Missions to support these programs. We now spend more manhours of administrative cost policing or investigating abuses of programs than we do in good management to prevent abuses or poor planning from occurring.

Finally, let me return to the concept for the entire program which I mentioned in my introductory remarks. We can't work out administrative details or assign responsibilities unless we really agree on what the program is intended to do. I have accepted as proper the Act having multiple purposes. But I have emphasized also that Congress and the Administration must choose some priorities among those purposes.

My concept is simple.

The first priority must be needs of people.

The second priority must be needs of

American agriculture.

The third priority is pragmatic accommodation to make both objectives match up, and thereby assure the continued support without which both higher priority objectives will suffer.

SUMMARY STATEMENT OF HERBERT J. WATERS

The Food for Peace legislation is deliberately broad in concept and designed to serve varying purposes, sometimes seemingly in conflict. They need not be, with proper administration and guidance from the Congress as to priority of objectives.

For more than two decades this program has had profound impact for the good on international economic development as well as on American agriculture itself.

From its inception sponsors of this legislation knew it must serve more than one purpose; simultaneously helping other countries otherwise unable to buy urgently needed food supplies, while also benefiting American agriculture otherwise deprived of a market in developing countries.

Perhaps one of the great by-products of P.L. 480 has been a greater understanding in rural America of the vital importance of economic assistance to developing countries. We probably never could have mobilized support for shouldering our rightful responsibilities toward building a better world elsewhere unless we involved our farm people directly in that effort—building better markets for them, while we were building a better life for other people.

Despite all the criticisms that evolve from time to time over administrative details, the overall success of the program will be recorded in history as an imaginative approach when new ideas were needed, and a tribute to the foresight of the legislators from rural America who developed it.

With that general comment, I would like to move on to more specific suggestions about several phases of the program that might be helpful. FOR TITLE I

In country selection criteria, some special consideration should be given to countries who buy food on long-term credit terms but use it entirely for socially-desirable purposes of distribution among its most needy people rather than just for commercial resale.

In encouraging better nutrition, some special incentive should be provided for credit purchases of high protein blended foods or other protein-fortified processed products, such as charging only for the grain equivalent and absorbing the processing cost.

In seeking to expand sales participating, consideration should be given to mandating a set-aside of some percentage for sales by producer-controlled export groups or smaller exporters so that a government-financed export program is not dominated by a handful of major multinational grain traders.

In years of higher than normal production in the U.S., more consideration should be given to helping build up developing country stabilization reserves to protect them against adverse crop conditions in their own country, sudden drastic cutbacks in future food aid in any given year, or even sharp international price fluctuations.

FOR TITLE II

Food donation programs embody most of what the public conceives the Food for Peace program to be—providing humanitarian people-to-people assistance directly to the people who need it the most, most directly providing nutritional emphasis, and providing the most visible evidence of U.S. compassion and sharing. Yet Food for Work project, Maternal-Child-Health programs, and school feeding programs all have a significant development impact—and possibly could have even more if AID programmed more of its technical assistance and economic assistance into projects of which the food assistance was a direct component.

IMPROVED ADMINISTRATION

It's time to re-examine and update the Administrative mechanisms for this program cutting across many departments of government. It is still operating under an executive order issued by President Eisenhower in the 1950s, even though its purposes and objectives have been shifted considerably by the Congress since then.

AID needs to devote more of its staff and financial resources to back up and make more effective a program for which all commodity and shipping costs are paid by USDA. We now spend more manhours of administrative cost policing or investigating abuses of programs than we do in good management to prevent abuses or poor planning from occurring. Food is a valuable resource, and should be used as wisely as money to achieve the maximum benefits.

GUIDING CONCEPT

We can't work out administrative details or assign responsibilities unless we really agree on what the program is intended to do. We accept as proper the Act having multiple purposes. But Congress and the Administration must choose some priorities among those purposes.

My concept is simple.

The first priority must be needs of people.

The second priority must be needs of American agriculture.

The third priority is pragmatic accommodation to make both objectives match up, and thereby assure the continued support without which both higher priority objectives will suffer.

TESTIMONY OF ROBBIN S. JOHNSON INTRODUCTION

My name is Robbin Johnson. I am an assistant vice president with Cargill, Incorporated, an international commodity processing and marketing company headquartered in Minnetonka, Minnesota.

The Subcommittee has asked me to discuss

the role of market development in Public Law 480. I would like to approach this subject by stressing how market development can p'ay a constructive role in advancing the goal of food security. This involves looking at three subjects: (1) the relationship between grain supplies and distribution of grain through aid and trade; (2) the needs which food aid must meet; and (3) the implication of such a food aid strategy for humanitarian and market development objectives.

SUPPLY AND DISTRIBUTION OF GRAIN

Public Law 480 was initially passed at a time when grain supplies in the U.S. and the world exceeded commercial demand. In fact, Commodity Credit Corporation wheat stocks in 1955 exceeded total domestic and export use that year. Food for Peace offered a means of reducing these burdensome surpluses, assisting allies in rebuilding their economies and providing food to countries that otherwise could not afford it.

Even after some early Public Law 480 recipients made the transition to commercial export customers, surpluses continued. The pressure of surplus stocks stimulated increased shipments to non-commercial customers and the development of programs to expand future commercial markets. Such shipments totaled more than one-fifth of all U.S. agricultural exports until the mid-1960's.

Circumstances had changed by the beginning of this decade, however, and by 1973 excess stocks had largely disappeared as commercial exports surged. For the first time, potential conflicts emerged between commercial and food aid flows.

Good harvests the past two years once again altered the stuation. U.S. and world wheat carryover stocks have been rebuilt. More importantly, the experiences of recent years have indicated that the conflicts between commercial demand and food aid requirements can be avoided. Central to this change has been growing support for a conscious U.S. grain reserve program.

Such a program avoids many of the costs of surpluses by limiting excessive accumulation of government-owned stocks. It avoids risks of premature release of stocks by separating acquisition and release of grain from such stocks by a wider price band. In other words, a conscious grain reserve introduces greater security and stability to U.S. stocks policy.

Strains on grain supplies also arose because of consumption policies in major importing countries. The U.S. substantially reduced its grain consumption in 1974 in response to scarcity, but many commercial customers maintained grain use at high level by insulating their internal prices from external events. As a result, market forces were not permitted to redistribute grain to areas of greatest need.

The GATT talks offer an opportunity to improve on this performance. U.S. interests in expanded access to markets can be blended with importers' desires for access to supplies in ways that can ease burdens of future adjustments to temporary disruptions.

In other words, harsh conflicts between commercial demands and food aid commitments can be avoided through improved stock management and trade policies. This should eliminate the tensions that triggered the requirement that 75 percent of PL 480 Title I shipments must go to countries with per capita incomes below \$300. Removing that requirement will improve the effectiveness of U.S. food aid. It will also support a more flexible food aid strategy that can serve both the immediate food needs and the longer-term development requirements of recipient countries.

A FOOD AID STRATEGY

In developing such a food aid strategy, it is important to distinguish the various roles PL 480 can play. First, it is a means of covering the chronic food deficits of some develop-

ing countries. Such countries currently lack the resources to produce sufficient food supplies internally or to purchase them commer-

cially from other countries.

Second, it is a means of covering periodic

fluctuations in food aid requirements. These temporary needs can arise from poor harvests, natural disasters, civil disturbances or sudden deterioration in a country's balance of payments. Unlike chronic food aid needs, these periodic requirements are difficult if not impossible to predict.

Ensuring sufficient commodity supplies to meet both kinds of immediate assistance represents what can broadly be described as the humanitarian objective of PL 480. A food aid strategy based on this goal alone, however, is incomplete and sometimes self defeating. For example, massive food aid shipments to cover current deficits can encourage "cheap food" policies in recipient countries which undermine prospects for expanded indigenous food production.

Alternatively, the opportunity to use food aid as a resource to develop other parts of the economy may be overlooked. While some countries have the capacity to pursue goals of food self-sufficiency, others cannot achieve self-sufficiency except at high cost to their development. For them, greater food security may involve generating the capacity to pay for needed imports with earnings from trade in other commodities.

In other words, providing food commodities is only part of a policy to increase food security. Problems of hunger are linked directly to poverty, underemployment and population growth. Solutions require progress on all fronts. PL 480 should be seen as a tool to transfer commodities to meet interim food needs while also generating resources to support a broader process of economic development.

IMPLICATIONS FOR MARKET DEVELOPMENT AND HUMANITARIAN OBJECTIVES

This means, first of all, that the strengths of PL 480 in meeting humanitarian needs continue to be relevant. It has proven to be an effective means of harnessing public financing and private marketing or charitable institutions to move and distribute food ald efficiently.

Second, PL 480's initial objective of surplus disposal has been supplemented increasingly by the goal of using food as a resource to spur rural development in recipient countries. PL 480 is now a means to encourage expansion of rural employment, economic development and purchasing power. More income in the hands of rural poor means larger markets for indigenous food production, but it also can mean growth in food imports.

The result is not a conflict between humanitarian and market development goals but a realization of both objectives. Food security is increased by providing people with more food while equipping them with the means to pay for even better diets.

Finally, continued emphasis on traditional market development efforts also can exert some important disciplines that contribute to greater food security. For example, a part of any market development strategy is providing grain supplies on a reliable, regular basis over a sufficient period of time to be incorporated into the development strategies of recipient countries. This can be achieved by ensuring that some of the PL 480 resources plowed back into recipient country development go to strengthen internal food distribution networks. In addition to storage facilities, this means investment in marketing, handling and transportation capabilities.

The result is not only an increased marketing capability but also improved food security. Greater efficiency in internal distribution networks helps ensure that availability of food to countries translates into availability of food to individual households.

CONCLUSION

In other words, market development can be pursued in ways that serve the humanitarian goal of greater food security as well. Providing food aid to those most in need will increase total food consumption. Using PL 480 as a transfer of resources to anchor development in rural areas, therefore, can generate both the demand and the ability to pay for additional food supplies from indigenous production and imports.

Similarly, use of PL 480 resources to build distribution networks improves the reliability of food supplies for individual consumers. The resulting improved food security can often mean larger markets for U.S. farmers as well as for indigenous production.

STATEMENT OF WESLEY J. BAHR.

Mr. WILLIAMS. Mr. President, it is a great pleasure for me to call to the attention of my colleagues a particularly perceptive article by Wesley J. Bahr, president of the First Federal Savings and Loan Association of New York.

Mr. Bahr has captured quite well my own sentiments concerning the need for well-trained and highly educated personnel in the financial community. As he states so eloquently:

The continued success of our industry (and any industry for that matter) lies with our current and future personnel, and our responsibilities require that we emphasize the need and importance of educational pursuits...

Mr. President, I ask unanimous consent to have printed in the Record a copy of Mr. Bahr's article "Education Is the Key to Success" and some information on his own impressive background.

There being no objection, the material was ordered to be printed in the Record, as follows:

WESLEY J. BAHR

Resides 67 Nejecho Drive, Bricktown, New Jersey.

Graduate of Princeton University—1938. President of First Federal Savings and Loan Association of New York—650 Million Dollar Association.

President of the Manhattan Kiwanis Foundation Inc.

Member of the Federal Savings and Loan Advisory Council. Director of Savings Association League of

New York State. Chairman of Thrift Associations Service

Corp.
Former Director of the Federal Home Loan
Bank of New York 1970-74.

Past National President of the Institute of Financial Education.

Education Is the Key to Success (By Wesley J. Bahr)

On the occasion of the 25th Anniversary of the Savings Association League of New York State, we are provided with an opportunity to look back over the strides taken by the League and the Industry during the past quarter century. It is a time to reflect on our past accomplishments, evaluate our current position as financial intermediates, and establish those goals and objectives which will enable us to meet the challenges of the future.

The traditional nature of the Industry has not changed markedly over these past 25 years, and our continued ability to protect the funds of our depositors as well as providing for housing needs is well-evidenced by our tremendous rate of growth. Chief among the Industry's successful efforts to improve its competitive stance in the marketplace has

been branch expansions, enabling larger portions of the population to utilize our many services, and legislative actions which have opened new avenues of lending authority, investment powers, and service concepts. It has been a period in which we have seen the advent of electronic banking, time accounts in certificate form, service corporations in diversified areas of endeavor, consumer lending programs such as home improvements and student loans, and new programs such as Keogh and IRA. It has been a time too, however, when the effects of economic conditions: rising interest rates, disintermediates, less housing starts than Congress had deemed necessary to provide "a decent home for every American", and rising costs of funds, to name a few, have periodically given us cause for concern.

While savings and loans have successfully weathered the storms of these monetary cycles, we continue to find ourselves in the weakest posture by sheer numbers and asset size, as compared to the enormity of our competition, whether it be commercial banks, savings banks, or life insurance companies. While future preparation and revitalization of the Industry's operating framework can be assisted by legislative initiative, such as evidenced by the Financial Institutions Act proposal, or amendments to the Home Owner's Loan Act, the key lies in the individual and collective efforts of savings and loan managements. To this end, the need for continued education and learning processes cannot be overemphasized.

The Institute of Financial Education has ably met this educational challenge and responsibilities attendant, by providing a full range of course studies, workshop clinics, and conference seminars, fully supplemented by a range of resident school curricula. As technologies of management and operation changed and demanded greater sophistica-tion, the Institute remained attuned to the needs and requirements of our business and upgraded and expanded course offerings accordingly. That the Institute has met Industry's demands for greater knowledge and refinement of operations is apparent by the sheer number of participants. The student body as of 1976 is in excess of 45.800. New York State has clearly shown its active support for the Institute with seven chapters currently serving the educational needs of the business with a student enrollment of 1,427. Additionally, over the years, New York State associations have provided leadership to the national organization, serving as national trustees or district representatives. The National Presidency of the Institute has been held by New York State leaders on six occasions: George Bliss in 1930, Joseph Holzka in 1938, Charles Plumb in 1943, Harry Minners in 1933, Charles Kenny in 1958, and my-

In this anniversary year for SALNY, we find ourselves at an important crossroads, as the Industry adopts an even more aggressive philosophy for competing in the market. Legislative authority enables us to tread on the once sacred ground of commercial banks, namely the checking account. It opens new vistas of lending practices, through the issuance of subordinated debentures and mortgage-backed bonds. When the moratorium is eventually lifted on stock conversions, managements will be faced with a significant decision. To successfully meet these new challenges, we must assess our internal strengths and expertise to execute the sophisticated responsibilities and take action now to insure a smooth transition into future opera-We must ask ourselves if we have the specialists to handle the increased technology that EFTS will continue to demand as it gains in importance and customer accept-ance. Do we have enough qualified personnel to handle the expanded service programs we are going to offer, such as checking accounts, life insurance, Trust, Investment or Man-

self in 1963.

agement departments? Will our abilities to offer subordinated debentures and mortgagebacked bonds be limited or delayed for lack of expert staff to manage the portfolios? We would all like to think that we can answer on a positive note to each question posed, but, in fact, are we able to?

We have all taken steps to resolve these considerations, through the development of in-house training, schools for tellers, mastering the newest computer terminal operations, rotational programs for management trainees to insure their exposure to the broad savings and loan framework, and advanced executive development programs for middlemanagement personnel. We have further evidenced our support by absorbing the costs for attendance at any of the Institute courses, and we continue to improve tuition refund plans for our college-oriented employees. Each of us has a number of potential leaders within our organizations, and it behooves us to capitalize on these assets by providing guidance and encouragement through internal and external education. providing

The continued success of our Industry lies with our current and future personnel, and our responsibilities require that we emphasize the need and importance of educational pursuits, adding to the rosters of both the Institute and local colleges. To insure a successful future, the effective utilization and continual refinement of our greatest asset . . . our people . . . is imperative.

PRELIMINARY NOTIFICATION PROPOSED ARMS SALES

Mr. HUMPHREY. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of \$25 million or, in the case of major defense equipment as defined in the act, those in excess of \$7 million. Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Commit-

Pursuant to an informal understanding, the Department of Defense has agreed to provide the committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the RECORD in accordance with previous practice.

I wish to inform Members of the Senate that two such notifications were re-

ceived on April 15, 1977.

Interested Senators may inquire as to the details of this preliminary notification at the offices of the Committee on Foreign Relations, room S-116 in the Capitol.

TAXABLE BOND OPTION—VIEWS OF STATES AND CITIES

Mr. KENNEDY. Mr. President, earlier this year, together with the Senator from New Jersey (Mr. WILLIAMS), the Senator from Arizona (Mr. DECONCINI), and the Senator from New York (Mr. Javits), I introduced legislation in the Senate (S. 261) to create a "taxable bond option' for States and local governments under which jurisdictions could issue taxable bonds with a 40-percent Federal interest subsidy.

Shortly after the bill was introduced, I wrote to each of the State Governors and to approximately 700 mayors and local officials, requesting their comments on the legislation. In the intervening weeks, I have received 74 replies to my inquiry. These replies reflect the views of a wide variety of States and cities in the Nation, and are running 3-2 in favor of the TBO.

I believe these replies will be of interest to Members of Congress as we continue the consideration of the TBO proposal, and I ask unanimous consent that my letter and the replies I have received may be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD,

as follows:

U.S. SENATE Washington, D.C., January 24, 1977.

-: Last week, Senators Pete Wil-DEAR liams, Dennis DeConcini and I introduced legislation (S. 261) in the Senate proposing a 40% federal interest subsidy for State and local governments that elect to issue taxable bonds. The legislation—creating a so-called "taxable bond option" (TBO)—is similar to a measure which Congressman Henry Reuss of Wisconsin and I introduced last year and which was approved by the House Ways and Means Committee in April 1976.

The purpose of the taxable bond option is to provide an additional method of Federal financial assistance to help state and local governments deal with their increasing need for capital. By offering a substantial Federal interest subsidy for jurisdictions that elect to issue taxable bonds, Congress can provide an effective new means of financial assistance to States and cities. At the same time, the legislation would not in any way affect the ability of States and cities to issue tax exempt bonds if they wish to do so.

One of the most important aspects of the TBO is that it involves no Federal approval, oversight, or other intrusion into state and local affairs as a condition for receiving the Federal assistance. The interest subsidy is automatic-all jurisdictions that elect issue taxable bonds will qualify automatically for the 40% federal subsidy of the interest cost. For example, on a 9% taxable bond, a state would pay 5.4% and the Federal Government would pay the remaining 3.6% of the interest.

Enclosed is a reprint from the Congressional Record, providing additional details about the measure. As you will see, I believe that the TBO offers an effective, economic and "no strings" method of channeling needed Federal aid to the States.

I would be grateful for your comments and reaction to the proposal. My hope is that the new Congress will give it early consideration as part of the forthcoming economic recovery legislation.

With best regards, Sincerely,

EDWARD M. KENNEDY.

Note: The enclosure sent with the letter is not printed here in the RECORD, but appears at 1210 of the RECORD for January 14, 1977.

ALABAMA

CITY OF BIRMINGHAM, ALA. OFFICE OF THE MAYOR, March 2, 1977.

Sen. EDWARD M. KENNEDY Russell Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for sending me a copy of Senate Bill 261 which would create a taxable bond option for local governments. I appreciate the fact that some cities, especially in the northeast, are faced with extremely difficult fiscal situations and I understand your desire to assist them through this legislation. Birmingham also faces fiscal restraints imposed by the flight of industry from the core city, the flight of middle and upper income families from our residential sections and the necessity of maintaining basic utilities in the downtown area which help to serve suburban communities even though those suburbs con-

tribute no taxes to the core city government.

The difference in Birmingham and some other cities is that over the past fourteen years this municipal government has faced up to its responsibilities and enacted neces sary taxes to continue to offer decent basic municipal services to our citizens. By doing so, successive administrations have avoided the trap of borrowing long term money for short term expenses and other irresponsible fiscal tactics which have caused havoc in some localities. In addition, these prior administrations have also provided for taxes to be paid into a debt service fund which now contains an ample surplus and income for Birmingham's debt issuance needs for the foreseeable future. I, and most of the people of this city, believe that fiscal responsibility is the answer to the problems of the cities, not tinkering with the municipal bond market.

The fact sheet accompanying your bill indicates that "only" about seventeen percent of the volume of municipal bonds would shift to the taxable bond option. The fact sheet also states "There is no significant possibility that this small amount of taxable bond financing would disrupt this mar-ket." I must disagree with this, and I believe that most financial analysts would agree that seventeen percent (17%) of any mar-ket is not a "small" portion of it. Finally, I believe that the existing system

is working and working well. I hope that it will be allowed to continue to do so.

Sincerely,

DAVID VANN, Mayor.

CITY OF MONTGOMERY, Montgomery, Ala., March 10, 1977.
Re Taxable bond option (proposed Federal legislation S. 261).

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: I have little doubt, from the Federal government viewpoint, that the taxable bond option will result in greater efficiency. At least the Federal government will enjoy some return whereas today the tax-exempt bond is tacitly underwritten by the exempt provisions it enjoys.

The proposed legislation may ease the fiscal crisis faced by some of our less financially prudent municipalities by broadening the existing bond market. It ought to provide easier access to the long-term market. This in turn will reduce the local governments dependence on volatile short-term financing.

I feel that while the proposed legislation may be extensively used by larger municipalities that we in the City of Montgomery will find little utility in the taxable bond option. It is my hope, notwithstanding the assurances that there is minimal risk to the tax-exempt market, that tax-free bond interest rates will not be driven up as a result of this legislation.

Sincerely.

EMORY M. FOLMAR, Acting Mayor.

ALASKA

STATE OF ALASKA. OFFICE OF THE GOVERNOR, Juneau, Alaska, March 9, 1977.

Hon. EDWARD M. KENNEDY.

U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for the opportunity to comment on S. 261, the Municipal Taxable Bond Alternative Act of 1977 which you forwarded to me with explanatory materials on January 18, 1977. This Bill is of particular interest to the State of Alaska because of the sizeable capital needs of Alaska's public sector and because of our relative remoteness from capital markets. Accordingly I have asked for a thorough review of the bill and the explanatory materials by my Department of Revenue. The comments below reflect a consensus arrived after this review and represents the position of the State administration.

Although we appreciate the purpose of the taxable bond option, provided for by S. 261 to help state and local governments deal with their increasing need for capital, question whether the taxable bond option will provide those jurisdictions which need the assistance most with any significant relief. The multiplicity of small issuers and lack of audited financial statements makes the determination of the relative financial merit of many issuers difficult for all but the largest investors to ascertain.

We are aware that Alaska state and local government securities have historically been sold at higher interest rates than those of no more credit worthy states and localities because of the distance of Alaska from capital markets and because many of our emerging municipalities are not well known to traditional municipal investors. To assist local governments, on my sponsorship, the Alaska Legislature enacted in 1975 the Alaska Municipal Bond Bank Authority Bill which is designed to provide a vehicle for marketing local government issues through the State Bond Bank Authority purchasing local government bonds. The Legislature established a \$3 million reserve fund in connection with this legislation to enhance the security of the Bond Bank Authority's bonds and to reduce the interest costs pay able in the financing. The enactment of this legislation and subsequent financings of the Authority have represented a significant step in achieving the goal of lower interest costs for many of our Alaska municipalities. This permits the financing of capital projects which may not have been available to Alaskan municipalities if they were to seek independent entry to the municipal bond

Much of the material dwells on the inefficiency of the so-called "subsidy" municipal governments by virtue of the fact that the bond interest is exempt from federal income taxes. We question the characterization as "subsidy" of what is in fact a constitutionally sanctioned and congressionally reinforced exclusion from federal income tax of the interest on state and local government securities. Further, we question the conclusion that excessive reliance by municipalities on short term borrowing has been due to unstable municipal interest rates and a demand by commercial banks for short term investments. We understand the New York City situation to have involved, in part at least, interim borrowing against non-existent tax sources. Since the situation in New York City and other large cities is attributable in large part to the economic deterioration of these municipal entities, we question whether the authority to penetrate the taxable bond market would provide a significant measure of relief in this kind of situation. If it should become apparent that the 40 percent federal interest subsidy provided by S. 261, in fact, did not provide significant relief to these large cities, we are concerned that the stage would be set for requests for federal guarantees and federal insurance.

In summary, then, let me state that Alaska does not support the taxable bond option contained in S. 261. Our position arises from our concern that the bill will not provide the relief claimed and will lead at a later time to federal intrusion into states and local affairs and to full panoply of federal controls which such intrusion implies.

Sincerely,

JAY S. HAMMOND, Governor.

ARTZONA

CITY OF FLAGSTAFF, Flagstaff, Ariz., February 24, 1977. Hon. EDWARD M. KENNEDY,

U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for the opportunity to comment on the proposed 'taxable bond option" (S. 261). We in Flagstaff have not experienced the severe problems besetting other larger areas particularly the eastern United States relating to our bond capabilities. We have been fortunate in that we have seen a continual improvement in Flagstaff's bond rating and subsequently have enjoyed increasingly favorable interest rates. The last bond sale which we completed in the amount of three million dollars for our water utilities achieved an interest rate of less than 5 percent. Our current financial structure is extremely sound.

We recognize the necessity of providing alternatives to those cities which, for whatever reason, have experienced increasing financial problems. Our primary concern is that those alternatives not jeopardize the extremely favorable situation which our local taxpayers currently enjoy as a result of hard work of this Council, former Councils and the administration. The only potential difficulty which might arise from S. 261 might be that bond buyers would be more anxious to go with the alternative funding than they would the traditional municipal bond route. If this were the case the number of buyers in the bond market might be reduced thus lessening the competition for our bonds. I can't forsee this becoming an immediate problem. The potential is there however and I personally would intend to monitor the bond market after passage of this legislation.

Although, as I have said, Flagstaff has not experienced problems of other areas, I would support your effort toward providing financing alternatives for other local jurisdictions as provided in S. 261. If you have further questions on this or other matters please feel free to contact me at your convenience.

Sincerely.

ROBERT L. MOODY, Mayor.

CITY OF GLENDALE, Glendale, Ariz., February 24, 1977. Senator EDWARD M. KENNEDY,

U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: This letter is in response to your recent correspondence regarding your proposed legislation (S. 261-Taxable Bond Option).

I have discussed this idea with my financial staff and they feel the benefits, if any, do not warrant the passage of S. 261. The taxable bond option would lead to confusion as to what is, and what is not tax exempt. This legislation is the first step in making all municipal bonds taxable at a later date. There are many other methods of strengthening city-federal relationship besides the taxable bond option.

Thank you for the opportunity to respond to legislation that affects City Government. Sincerely,

J. STERLING RIDGE,

Mayor.

CALIFORNIA

STATE OF CALIFORNIA. DEPARTMENT OF FINANCE Sacramento, Calif., February 18, 1977. Hon. EDWARD M. KENNEDY,

Member of the U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: The Governor has

asked me to respond to your recent letter. We are familiar with the "taxable bond option" concept. Last year we reviewed a measure by Congressman Ullman, HR 12774, that had essentially the same provisions as your bill. Our greatest concern with taxable state and local obligations is that not all governmental units would be treated equally. percentage reimbursement provides the atest benefits to those units of government with the poorest credit rating. We would prefer a flat rate reimbursement policy so that governmental units with good credit ratings would receive benefits in direct relationship to their credit rating.

Legislation at the Federal level that would allow state and local governments to issue taxable bonds would have the following im-

ADVANTAGES

- 1. The subsidy program would tend to reduce the supply of tax-exempt bonds which in turn will depress interest rates on those remaining. Consequently, there would be a reduction in both governmental borrowing costs and the availability and attractiveness of exempt obligations to high bracket taxpayers.
- 2. Would broaden the financing options available to state and local government. It should be noted, however, that the State of California adequately satisfies its current needs with the tax-exempt bond market. In addition, it would expand the market for state and local bonds. Natural buyers of bonds, such as pension funds and educational and charitable foundations that are not attracted by the tax exemption since their income is already exempt, would now find state and local bonds more desirable.
- 3. Would increase the income base for tax purposes and result in increased state revenues
- 4. Would facilitate the determination of the real cost of a project.
- 5. Should somewhat improve the allocation of investment funds. The tax-exempt bond market misallocates capital since it creates a special incentive to invest into securities in which the risk of default is negligible.

DISADVANTAGES

- 1. Would not be equitable to all state and local governments because of differences in credit ratings.
- 2. Could be the first step in eliminating tax-exempt bonds and thus has the potential of impinging on our ability to raise capital. If the taxable bond option proves to be an effective instrument in financing state and local government expenditures, it is conceivable that there would be pressure to eliminate tax-exempt bonds because of their shortcomings.
- In conclusion, it seems that units of government with the poorest credit ratings will gain the most by this proposal. As such, the proposal would be of limited value to California, especially in view of the fact that our current capital needs are adequately satisfied through the tax-exempt market. We would not oppose a proposal that would allow us the option of issuing taxable bonds; however, we would find it easier to offer stronger support if the proposal would provide benefits to governmental units in direct relationship to their credit ratings.

Sincerely,

ROY M. BELL, Director of Finance.

CXXIII-707-Part 9

OFFICE OF THE GOVERNOR, Atlanta, Ga., March 4, 1977. Hon. EDWARD M. KENNEDY,

U.S. Senate. Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for writing and asking for reaction to S. 261, the "Municipal Taxable Bond Alternative Act of 1977". I appreciate the opportunity to express our position on this matter.

At this time we do not support the proposal of a federal subsidy of taxable bonds. While the concept is a seemingly attractive one on the surface, problems may develop as we look down the road five, ten, or even twenty years from now. For instance, we calculate that in Georgia a 30% federal subsidy would be our break even point on taxable bonds. If a subsidy as high as 40% were enacted into law in theory allowing us a 10% savings on interest costs, the State and her local governments would be compelled to sell a taxable bond in lieu of tax bonds.

This would eventually have the effect of killing the tax free bond market and, also tie too closely the future bond prerogatives and opportunities of local and state governments to decisions of the federal government. For, as the federal government attempts to maintain this 40% liability through the years and as various localities add on to the program, the cost to the U.S. Treasury may come prohibitive. In future federal budgetary considerations it may become necessary to considerations it may become necessary to lower these costs by setting priorities and limits on bond sales commissioned by local governments. These conditions could, through an unfortunate turn of events, lock out of the taxable bond market various worthy city, county, and state bond projects.
In addition, this bill also has the unfor-

tunate effect of indirectly rewarding those governments with poor bond ratings, since the subsidy would be a percentage of the interest rate. Thus, these governments would be paid a higher amount than those governments with a good credit rating and a lower interest rate.

Again, thank you for this opportunity to react to your proposal. While I am aware of the positive intent in which this program was conceived. I believe there are several potential problems which outweigh the possible benefits.

If I can be of further assistance to you in any way, please let me know.

Sincerely,

GEORGE BUSBEE, Governor.

CITY OF PALM SPRINGS, CALIF., February 22, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for transmitting to me S. 261 for review. I have had a chance to do so and have also requested my staff and one member of the City Council, who is a certified public accountant, to review the proposal.

In essence, we think it is a good idea and would support such legislation. On the other hand, the member of the Council, who works in the financial world, is not convinced that prospective bond buyer would be interested in securing taxable 9% bonds as opposed to acquiring non-taxable 5 to 6% bonds. We would hope that during the process of your review and development of such legislation that you have carefully looked into this matter

We appreciate an opportunity to respond. Sincerely,

WILLIAM A. FOSTER, Mayor.

CITY OF FOUNTAIN VALLEY, Fountain Valley, Calif., March 3, 1977. Re S. 261.

Senator EDWARD M. KENNEDY.

U.S. Senate.

Washington, D.C.

DEAR SENATOR KENNEDY: The City of Fountain Valley is in favor of the passage of S. 261, which would allow municipalities the option of whether or not to issue taxable or tax-free bonds. It is our belief that this option will make available to municipalities an additional source of funds if the municipality so desires.

It is also our feeling that the Federal Subsidy should not be reduced below 40% if S. 261 is to remain a viable method of financing for municipalities.

Cordially,

ROGER R. STANTON, Mayor.

CITY OF OAKLAND, Oakland, Calif., March 7, 1977. Senator EDWARD M. KENNEDY.

U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: There appears to be considerable confusion and uncertainty regarding your legislation (S. 261) creating a so-called "taxable bond option" (TBO).

Our local banking/investment community takes exception to the positions stated in the Congressional Record of January 14, 1977 on the TBO. It's very difficult to make a clear judgment on the legislation, considering that both viewpoints are plausible. I must admit that it seems quite speculative to gauge the total impact if this legislation were adopted.

As noted in the Congressional Record, the present municipal bond market has grown about threefold since 1964 in terms of municipal borrowing levels. At the same time, there has been a decrease in the number of bond buyers, forcing up borrowing costs for local and state governments. It's my concern that if the TBO legislation were approved, there would be a market shift adding municipal TBO's to the corporate market, thereby forcing up the costs on both govern-ment and corporate borrowers. This could fuel inflation, and be self-defeating in terms of economic stimulus efforts. It could also cause Federal tax revenues to decline as a result of greater corporate costs and the resulting lower net profits.

Another concern I have on this issue is that it could add another layer of government and may impinge, now or in the future, on local government sovereignty.

I believe there is merit in exploring the use of the TBO, but I would prefer to see it done on a pilot basis initially. I understand that the Housing Act of 1974 provided for the use of TBO's, although few if any have been issued. Since the use of the TBO could have dramatic yet uncertain impact on the bond market as well as tax revenues, it seems advisable to pursue it on a smallscale basis before launching a full-scale effort

I obviously share the uncertainty regarding this legislative matter, so am unable at this time to offer my unqualified support.

I appreciate the opportunity to provide input on the proposed legislation. Please let me know if I can be of further assistance. Sincerely,

JOHN H. READING. Mayor.

CITY OF PACIFICA,

Pacifica, Calif., March 8, 1977. Hon. EDWARD M. KENNEDY, U.S. Senate.

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for the opportunity to react to Senate legislation creating a taxable bond option for state and local governments. After a review by city staff, it is my opinion this legislation is not in the best interests of local government in general and Pacifica in particular. On the old Adam Smith theory that "bad money drives good money out of circulation," we would be opposed to such legislation as you propose.

I have enclosed a copy of our Director of Finance's conclusions concerning "taxable bond options" for your information. We are always interested in reviewing in advance legislation which has an impact on local government and appreciate the opportunity you have given us to offer our opinions.

Sincerely,

JANICE FULFORD, Mayor.

INTER-OFFICE MEMO, CITY COUNCIL, CITY OF Pacifica, Calif., March 1, 1977

To: Donald G. Weidner, City Manager. From: John R. Pratt, Director of Finance. Subject: Senator Kennedy's Letter to Mayor Fulford Dated January 21, 1977. Re Issuance of Taxable Bonds by State and Local Governments

I have not received any commentary from any of the organizations of which I am a member. This was discussed at a Municipal Finance Officers Directors' dinner I attended in Monterey in February. The reaction there was negative, and my reaction is the same as

It appears to me that even with the federal government giving a 40% federal subsidy of the interest cost of taxable bonds, the net interest rate which a municipality would have to pay would exceed the present interest rate payable on non-taxable bonds. This is because many of the people and institu-tions who are interested in buying non-taxable bonds are very likely not interested in buying taxable bonds at any interest rate. Thus, a very important source of funds is eliminated from the market, which will drive the interest rates up even higher.

Secondly, we have every evidence and right to be suspicious that Congress intends phase out tax exempt municipal bonds. It is my understanding that we can expect bills to be introduced that are much more severe than Senator Kennedy's.

> CITY OF BURBANK, CALIF., March 9, 1977.

Hon, EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C. DEAR SENATOR KENNEDY: Thank you for your letter regarding your proposed bill for the 40% federal interest subsidy in state local governments that elect to issue taxable bonds. I appreciate your consideration in letting us know about your proposal. At this time, the City of Burbank takes a negative view of such a proposal because of some concerns which I would like to outline.

On the surface, the idea appears to be very sound, but we wonder if such legislation would make municipalities susceptible to the Security Exchange Commission regulation. We are also concerned that such legislation might be a "foot in the door" toward elimination of tax exempt bonds and possible further federal regulations over local concerns

We realize that the legislation would open up new investment markets, but we are conabout those investment markets which it might exclude. Will banks, trusts, insurance companies, etc., continue to invest in taxable bonds? The bill indicates that it would keep cost at a minimum. This assumes that bonds are purchased by taxable entities and not by tax exempt organizations. We feel the taxpayer would pick up the difference between the old cost of federal government not receiving monies from

taxable exempt bonds, to a new cost in which investors would demand a higher return. Why should a small community like Burbank have its taxpayers subsidize the interest cost of larger cities?

We have not noticed a lack of investment capital for "sound issues" on tax exempt bonds. We feel such legislation as you propose can only be effective if conflicts are resolved between the state legislation establishing maximum interest rates and the new interest rate demanded by investors. Limitation in California is now at 8% plus 5% discount.

Finally, we must wonder if such legislation would place municipal issues into a highly competitive market with the private sector, which is also seeking capital. Would this drive up private sector costs? If interest is a function of risk, what "rate" would Lockheed pay vs. Los Angeles Department of Water and Power, or General Motors vs. New York Port Authority?

Sincerely yours,

LELAND C. AYRES. Mayor.

CITY OF SAN DIEGO, CALIF., March 17, 1977.

Hon, EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter regarding your legislation (S. 261) which would create a "taxable bond option" for municipalities such as the City of San Diego.

The city is always extremely interested in, and supportive of, any attempts by the Congress to funnel financial assistance to states and cities. Although we are unsure at this time how these bonds will be accepted by our financial community, we urge that the opportunity for their issuance be given the states and cities. Whether or not a particular investor would choose to purchase such bonds would depend on a number of variables such as the investor's tax bracket.

Regardless of the uncertainties, our city staff feels that T.B.O. is an appealing method of obtaining needed federal assistance with-out the customary "strings" attached.

I would be happy to provide whatever further assistance you may feel is necessary. Sincerely,

PETE WILSON, Mayor.

CITY OF HUNTINGTON BEACH, CALIF. March 22, 1977.

Congressman ROBERT BADHAM, Newport Beach, Calif.

DEAR CONGRESSMAN BADHAM: On behalf of the City of Huntington Beach, I would like to express our support for SB 261 which allows local government to "issue taxable obligations and receive a Federal subsidy of 40 percent of the interest yield on such obligations." Cities have resisted attempts to eliminate the tax exempt status of our bond issues because to do so would effect an immediate rise in cost. However, this bill

may create the vehicle to ultimately remove the tax exempt status of our bond issues be-cause to do so would effect an immediate rise in cost. However, this bill may create the vehicle to ultimately remove the tax exempt status of city bond issues without increas-

ing the cost to cities. Your support of SB 261 will be most ap-

preciated.

Sincerely, HARRIETT M. WIEDER, Mayor.

COLORADO CITY OF ARVADA, Arvada, Colo., February 28, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your recent request for my comments concerning the "taxable bond option" (TBO) proposal. Long-range, capital improvements financing is of a great concern to all municipalities including the City of Arvada. Any effort that would improve our position to finance needed capital improvement projects would certainly be encouraged.

I do have two concerns that I would like to address. The first is that if the TBO is approved by Congress there should be safeguards against unnecessary government regulation. As regulations are developed, would certainly propose that local govern-ment be asked their advice on what these regulations should be. My second concern is, although I am representing a governmental agency as Mayor, I would hope that con-siderations be made so that the TBO would not compete for funding with the free enterprise system.

Thank you again for asking for my comments. If I can be of further assistance, please feel free to contact me.

Sincerely,

DONALD L. FELAND, Mayor, City of Arvada.

CITY AND COUNTY OF DENVER, Denver, Colo., March 2, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your recent letter regarding S. 261 introduced by yourself and Senators Pete Williams and Dennis DeConcini regarding "taxable bond option" (TBO).

This has much merit in assisting those municipalities and states that have low bond ratings and have credit problems. Since your legislation leaves the option for cities to go either way, I have no objection to the same. I am sure that with Denver's AAA rating that we would not be interested in using this

method for capital financing.

I want to make it clear that the option has to remain for me to support the legislation. I also like the provision that there will be no federal involvement, approval or oversight into the issuing of taxable bond options. This is important because it leaves the decisionmaking up to the local authorities to choose the method they want and there would be an automatic support of the federal government to those cities wishing to take advantage of this legislation.

I would urgently request that any attempt to take away the option or to make municipal bonds taxable that you would exercise all of the resources available to you to oppose such

Again, thank you for your letter, and if I can be of further assistance, please let me hear from you.

Sincerely,

W. H. McNichols, Jr., Mayor.

CONNECTICUT

EXECUTIVE CHAMBERS, STATE OF CONNECTICUT, Hartford, Conn., March 17, 1977.

Hon. Edward M. Kennedy, U.S. Senator, U.S. Senate,

Washington, D.C.

DEAR TED: Thank you for your letter concerning your proposal to provide a 40 percent federal interest subsidy to state local governments which choose to issue taxable bonds.

I am pleased to note that your proposal contemplates no federal approval, oversight, or other involvement in state and local affairs as conditions for receiving the federal interest subsidy. As you know, past proposals did not contain any such prohibition of federal involvement in state and local affairs. With this area of concern resolved, the

State of Connecticut supports your proposal as a method to assist states and local governments in obtaining capital at a reasonable cost.

We do continue, however, to have one concern with this proposal. While the interest rate subsidy would be automatic for states and municipalities electing the taxable bond option, your proposal does not provide for a permanent federal appropriation or entitle-ment to fund the subsidy. We feel that such a feature would further enhance your proposal.

Thank you for the opportunity to comment on your proposal.

With best wishes. Cordially,

ELLA GRASSO, Governor.

OFFICE OF THE MAYOR, CITY OF NEW HAVEN. New Haven, Conn., February 25, 1977.

Re S. 261. Hon. EDWARD M. KENNEDY. Senator, U.S. Senate,

Washington, D.C. DEAR SENATOR KENNEDY: I strongly support S. 261 introduced by yourself and Sen-ators Williams and DeConcini providing cities with taxable bond options. Last year, just three weeks after being sworn in as Mayor of New Haven, I testified in favor of this legislation on behalf of the National League of Cities and the United States Conference of Mayors. I believe it is essential to cities that we have access to the vast investment sources which are unavailable to sellers of tax exempt bonds.

I am hoping to enlist the cooperation of various sources, possibly including Yale University, in purchasing bonds of the City of New Haven. Yale and other tax exempt institutions are not likely to invest in our municipal bonds until such time as they can get a rate that is competitive with that for corporate bonds. Your legislation would make this possible.

I therefore support your measure would be glad to express my support in public hearings or any other way you may deem appropriate.

Cordially,

FRANK LOGUE, Mayor.

CITY OF MILFORD, CONN., March 7, 1977.

Hon. EDWARD M. KENNEDY,

U.S. Senator, State of Massachusetts, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: This letter is in response to your letter of January 21st which included a copy of a proposed Bill regarding Municipal Taxable Bond Alternatives.

I have consulted with the Director of Finance of my City and others and we have reached some common conclusions. We feel we can support the proposed Bill as long as certain assumptions can be made.

The first is that the Bill will not create precedent regarding the taxability of municipal bonds, or to put it more simply, the municipality must be able to reserve right of choice. The second comment deals with the interest subsidy. It is our feeling that the figure of 40 percent is the minimum which would be acceptable to meet the fiscal objectives of the communities while at the same time allowing for a broader market. Previous Bills of this nature were not supported because this figure was listed to be 30 percent. The next point deals with the mechanics of handling the Federal interest subsidy. I feel it is in the best interest of the Federal Government and the Investor to make sure that the Federal interest money is not subverted to other uses with the Bonds going into default. The Bill would call for appropriate criminal penalties for misuse of these funds.

In summary, I feel that this Bill, if en-acted, will most likely be of more assistance to the larger cities than the ones such as mine. I feel the intent to broaden the market is worthy of my support. As long as a municipality retains the option of issuing a non-taxable bond, or a taxable bond with Federal subsidy and as long as the traditional arguments of the non-taxability of municipal bonds remains valid, then this Bill should be passed to the benefit of many of our communities.

Again, I thank you for allowing me to respond. I send my best regards.

Sincerely,

JOEL R. BALDWIN, Mayor.

WEST HARTFORD TOWN COUNCIL, West Hartford, Conn., March 18, 1977. Senator Edward M. Kennedy, U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: I have received your letter asking for any comments from local officials about the taxable bond option legislation. In talking this over with our financial people we agree that the legislation is satisfactory as it is written. The question on our minds is the future once Congress is involved. This option does broaden the market for lower quality issues but if in the future Congress should increase the subsidy would this hurt the higher quality issues? I suppose this is a political judgment which will be difficult for either you or me to make.

I hope this legislation is successful in spurring some form of economic recovery which we need so badly.

Sincerely.

ANNE P. STREETER,

HAWAII

EXECUTIVE CHAMBERS Honolulu, February 2, 1977.

Hon. EDWARD M. KENNEDY. U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of January 18, 1977, inviting our comments on the bill (S. 261) which you introduced in the Senate of the United States to give state and local governments the option of issuing taxable bonds with a 40 percent Federal interest subsidy.

In April 1976, the National Governors' Conference Task Force on state and local bonds, of which I was a member, recommended certain criteria for taxable bond option proposals. We believe your bill generally conforms to those standards and will provide state and local governments whose borrowing programs have been limited by the problems of New York City and for other reasons an alternative to the tax-exempt market.

We will be looking with interest on the progress of your proposal in the new Con-gress and hope that you will continue to keep us apprised of developments in this area. With warm personal regards, I remain,

Yours very truly, GEORGE R. ARIYOSHI, Governor.

COUNTY OF MAUL. Office of the Mayor, Wailuku, Maui, Hawaii, March 14, 1977. Re Taxable bond option. Hon. EDWARD M. KENNEDY, Senator, U.S. Senate, Washington, D.C.
DEAR SENATOR KENNEDY: Thank you very

much for your interest in our views and for the opportunity to comment on your Municipal Taxable Bond Alternative Act of 1977:

The bill to provide an election under which state and local governments may issue taxable obligations and receive a Federal subsidy of 40 percent of the interest yield on such obligations would provide County of Maul with another alternative in

dealing with our need for capital.

The important point to consider is that we can study the economic conditions during a specific period and determine which

option to take to enable the people we serve to come out with the best deal!

By way of this letter we shall request the support of your bill from our Hawaii Senators Daniel K. Inouye and Spark M. Matsunaga and Congressmen Daniel K. Akaka and Cec Heftel.

Mahalo and Aloha! Very truly yours,

ELMER F. CRAVALHO, Mayor, County of Maui.

CITY AND COUNTY OF HONOLULU, OFFICE OF THE MAYOR Honolulu, Hawaii, March 28, 1977.

Hon. EDWARD M. KENNEDY,

U.S. Senator, Washington, D.C.

Dear Senator Ted Kennedy: As I stated in my letter of February 12, 1976 to you regarding S. 2800 (1976), I am generally in favor of legislation which provides additional options to local governments in financing their capital needs.

I feel the same way about S. 261 (Municipal Taxable Bond Alternative Act of 1977) for as long as the issuance of taxable municipal bonds is voluntary, that the federal subsidy is automatic and unconditional and that the net cost of borrowing will be no higher than the issuance of tax-exempt municipals.

Thank you for this opportunity to comment on your proposal.

Warm personal regards.

Sincerely.

FRANK F. FASI, Mayor, City and County of Honolulu.

ILLINOIS

TOWN OF NORMAL, Normal, Ill., February 16, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Replying to your letter of January 21, I am favorably impressed with your proposal to have federally-subsidized interest rates for state and municipal bonds.

In Normal, we have had no difficulty in marketing our bonds, and recently we have issued a \$5.8 million advanced refunding issue and a \$2.5 million general obligation isbased on the advanced refunding. In each case, we have had a Double A or better rating.

The primary issue, as I see it, is one of pure economics for the taxpayer. As you have pointed out in your comments to the Senate, the tax-free bonds are purchased, in the main, by large corporations or wealthy individuals as a means to achieve income without paying taxes on it. Such income is, of course, at the expense of so many persons

who pay taxes on every cent they earn.

As a city, Normal and its 35,000 residents would not be adversely affected by your proposal, but the nation as a whole could stand to achieve considerable benefit. I applaud you for your insight into this matter.

However, a more grave issue faces many municipalities and that is simply keeping up with rising costs without having to go back to an already over-burden public for tax increases. The entire system of financing local governmental units needs a thorough review to achieve greater equity and flexi-bility. Your interest in the financial problems of cities is commendable.

Cordially,

RICHARD T. GODFREY, Mayor.

CITY OF CHICAGO, OFFICE OF THE MAYOR, April 1, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C. DEAR SENATOR KENNEDY: I have read with great interest your recently introduced legislation (S. 261) which would provide a federal interest subsidy for state and local governments that elect to issue taxable bonds. Your proposed legislation appears to have considerable merit and might provide significant aid to many of the nation's cities. Unfortunately, however, there are certain disadvantages which would more than offset these merits.

Although the National League of Cities originally endorsed the concept of a taxable bond option program, a new vote was taken at a recent meeting in Denver and more than a majority of the voting league members were in favor of reversing the league's position. The National Association of State Auditors, Controllers, and Treasurers is opposed to the taxable bond option, and the Securities Industry Association has testified that it cannot endorse a taxable bond option at this time. I would hope that measures could be taken to relieve the doubts of these prestigious organizations.

I am grateful for the past assistance you have given Chicago and all of the nation's cities, and I am confident we can work together on this matter and other issues in the future.

Sincerely,

MICHAEL A. BILANDIC,

Mayor.

IOWA

CITY OF COUNCIL BLUFFS, IOWA, OFFICE OF MAYOR. March 3, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senator, Washington, D.C.

DEAR SENATOR KENNEDY: I am in receipt of your correspondence dated January 21, 1977 regarding the Municipal Taxable Bond Alternative Act of 1977 (S. 261). As an attorney, tax accountant, and Mayor of the City of Council Bluffs, Iowa; I was most interested in reviewing the proposed legislation. The taxable bond option has been discussed and reviewed on several occasions at national conference meetings that I have attended or am aware of. In addition to conference discussion, the taxable bond option legislation of the 94th Congress was discussed and reviewed by our staff approximately five months ago. The impetus for that review was a need to study our local debt situation and report to the City Council various alternatives that would be of benefit to the citizens of Council Bluffs, Iowa.

Although the taxable bond option was not available to us some five months ago, staff recommended that "advance refunding" be studied as an alternate means of dealing with municipal debt for our city. The advance refunding concept was accepted by the City Council and affirmatively voted upon. In essence, it allowed the City to borrow that amount equal to its outstanding principal and invest up to fifteen percent of that amount at an unrestricted yield. At that point the Internal Revenue Service recognized this method of financing as acceptable and not contrary to the then current arbitrage regulations. After holding the public hearing and approving the advanced refunding concept, on October 29, 1976 the Internal Revenue Service proposed and published a revision of their regulations which effectively eliminated the City's ability to invest the fifteen percent, or as it is known, the minor portion of the advanced refunded bonds.

In summary, the Internal Revenue Service action "cost" the taxpayers of the City of Council Bluffs \$1,638,000 in lost savings over an approximate twenty year period. This action by IRS typifies the continuing trend of federal and state governments action which the various financing alternatives available to local units of government.

Due to the effective limitation of the advanced refunding alternative and the basic merits of the taxable bond option. I would strongly urge you to continue your support of the "Municipal Taxable Bond Alternative Act of 1977." I sincerely appreciate your solicitation of my opinion on this matter and would be most grateful if you were to keep me informed as to developments in this area.

Respectfully yours,
Hon. Daniel E. Lewis,
Mayor, City of Council Bluffs, Iowa.

KANSAS

STATE OF KANSAS, OFFICE OF THE GOVERNOR, Topeka, February 23, 1977

Hon. Edward M. Kennedy, U.S. Senate.

U.S. Senate, Washington, D.C.

Dear Senator Kennedy: On January 18, 1977 you wrote me in regard to S. 261, which you and other Senators have introduced to provide a 40% federal interest subsidy for state and local governments that elect to issue taxable bonds.

While I am in sympathy with those in favor of elimination of tax loopholes that mainly benefit the wealthy, as has traditionally been the case of the state and local tax-exempt bond market, I seriously question the propriety of S. 261 for several reasons:

First, in effect a direct federal expenditure for interest subsidization is given to those states and localities that are utilizing bonds for capital or other financing. This bill, without suitable controls on the scope and purpose of taxable bonds issued by states and localities, may encourage use of such bonds for possibly ill-advised or inappropriate purposes at less cost to the participating unit. The recent experience with New York City suggests that the use of bonds has, in the past, been a means to hide poor, misguided and inappropriate fiscal practices, such as use of bond proceeds to fund current expenditures. S. 261 provides no limits or guarantees against such state or local fiscal behavior, on grounds that these are state and local decisions not to be directed by the federal government. While I agree with this philosphy, in this instance a "hands off" federal role could be costly to the federal taxpayers, regardless of the city or state in which he resides. The federal government should not be in the business of encouraging and providing financial incentives for further public debt whether it is at the federal or state/local level.

Second, while I respect your good intentions in introducing this legislation, I assume other Governors would be fearful of the degree to which the federal commitment to providing the 40% differential would continue in the future. While a state or local government might initially issue a taxable security under this federal subsidy, the subsidies themselves would be subject to annual appropriations by the U.S. Congress, and no one can commit future Congresses to carrying out such an initial commitment. We have too often seen in the post grandiose federal promises and dismal commitment, resulting in increased fiscal burdens on states and localities.

Third, while the federal controls and strings are rather loose initially, as mentioned previously, those local and state governments using this subsidy program wisely might find themselves subject to additional federal controls, strings and additional red tape, as the misuse of the program by a few could conceivably result in uniform and punitive conditions and regulations for all participants in the future.

Fourth, the State of Kansas has been able to operate within the limits of fiscal responsibility to market bonds and provide for capital improvements of the state where necessary. The need for S. 261 would not now be necessary if other states and localities were not so quick to use the bonding approach to provide services today that are to be paid by our grandchildren tomorrow.

There would not be such an oversupply of municipal and state tax-exempt bonds. We should be encouraging and supporting the private market in its investment opportunities rather than developing new ways and approaches to draw investment funds away from the private sector into the public sector.

Fifth, most studies of the tax subsidy approach suggest that the amount the U.S. Treasury would have to pay out in subsidies would be greater than the amount of new taxes collected. This difference in costs would be shared by all federal taxpayers; in effect, having the federal taxpayers of Kansas provide part of the subsidy in interest costs of bonds for improvements of benefit to New York, Illinois or California residents.

In conclusion, I suggest you reconsider this legislation. On the surface it appears to be a relatively harmless financial bonanza to states and localities at little or no cost to the federal government. However, not only does it further promote a philosophy of public investment and spending, but it divorces the responsibility costs for raising revenue from the government level that spends the funds.

Very sincerely,

ROBERT F. BENNETT, Governor of Kansas.

CITY OF KANSAS CITY, KANS., March 21, 1977.

Hon. Edward M. Kennedy, U.S. Senate, Senate Office Building, Washington, D.C

DEAR SENATOR KENNEDY: Thank you for advising me of your proposed legislation (S. 261). This City supports such legislation which would authorize state and local governments to issue taxable bonds with a 40% federal interest subsidy.

This taxable bond option will provide local governments with an additional financial resource mechanism with which to meet pressing local needs with a minimum amount of federal "red tape", while at the same time it does not preclude the issue of tax exempt bonds if the local government should choose to do so.

Thank you again for apprising me of S. 261 and soliciting my comments. Best wishes for the success of this proposal and, particularly, for your continued personal and political success.

Sincerely,

John E. Reardon, Mayor.

KENTUCKY

Office of the Governor, Frankfort, Ky., March 8, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate Russell Senate Office Building,

Washington, D.C.

Dear Senator Kennedy: I would like to thank you for the opportunity to comment on your bill, the Municipal Taxable Bond Alternative Act of 1977. The taxable bond option proposed by your bill has significant implications for intergovernmental relations as well as debt management at the state and local level. As with similar legislation proposed previously, I have given your bill serious consideration, both on its merits and in terms of our experience here in Kentucky. However, as has been my position in the past, I cannot support the taxable bond option at this time.

Fortunately, we in Kentucky are enjoying good orderly growth, good bond ratings, and no difficulty in selling tax-free municipal bonds at interest rates comparable to, or even lower than, rates in the national market. Other than a few rural water districts, the Commonwealth and its instrumentalities have had an excellent debt service rec-

ord and are very well received in the national financial community. However, a large subsidy (40%), such as provided by this legislation, may encourage marginal local governments to issue bonds to finance capital projects, and any defaults in such issues induced by this subsidy could cause interestrates on more viable issues to be higher.

On a different level, this program could affect the ability of private corporations located in the Commonwealth to raise sufficient capital to finance their programs. Allowing state and local units throughout the United States to issue subsidized taxable bonds would increase the demand for funds in the taxable bond market, thus competing with such corporations in their attempts to

raise funds.

These and other criticisms of the legislation's components are not major, and I must admit that, taken as a whole, the bill is excellent, expanding the market for state and local securities with no federal regulation or interference. However, the very success of the taxable bond option holds the seed for possibly severe future problems.
As more state and local units successfully enter the taxable market and as the percentage of tax-exempt securities declines, there will be greater pressure to repeal the tax-exempt status of state and local securi-ties. Although other "tax expenditures" for such deductions or exemption as state/local taxes, mortgage interest, and capital gains have been more costly to the federal government, the tax-exempt status of state and local bonds may be more susceptible to re-peal since it primarily benefits the very wealthy while the others have much broader appeal. If this repeal is accomplished, there will be greater pressure to subject taxable, federally subsidized state and local securitles to increasing federal regulation and review, which at a minimum can only delay the issuance of such securities and the projects they are to finance. Such a scenario is not altogether improbable, as witnessed by the recent experience of general revenue sharing. What began as an effort in fiscal federalism, tying the revenue efficiency of the federal government to the expenditure decisions of state and local units, with little federal interference or restriction, has be-come a mechanism for increasing federal requirements for civil rights enforcement and citizen participation in budget making. Al-though both are commendable objectives, revenue sharing was not intended as the vehicle to serve either.

It should also be noted that during 1976 the tax-free municipal bond market absorbed a record amount of new issues (about \$34\$ billion), and interest rates declined. This has been, and continues to be, a very viable method for financing sound municipal capital programs. Our experience in Kentucky under the present system has been very satisfactory, and even if the taxable bond option would be an improvement, there is a serious question in my mind as to whether it may be worth the eventual cost.

Thank you again for inviting my opinions on such an important matter.

Sincerely,

JULIAN M. CARROLL.

MAINE

STATE OF MAINE,
OFFICE OF THE GOVERNOR,
Augusta, Maine, February 14, 1977.
Hon. Edward M. Kennedy,

U.S. Senator, Russell Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: This is an additional response to your letter of January 18 and my first response of February 1 in regard to the letter concerning the so-called "taxable bond option".

I have discussed this matter with John P. O'Sullivan, Commissioner of the Department

of Finance and Administration; I find that he and the staff of his Department are sup-portive of this type of legislation since it would, at least theoretically, give a municipality flexibility in determining whether or not it wants to enter the market via taxable or non-taxable obligation. I understand from the other material that you enclose as well as other information that has been made available in this area that there would be possible tax benefits to the government if the communities elected to go the taxable route. For these reasons I take the position that I would support this type of measure although I would reserve judgment on the specific legislation until I had an opportunity to either read the bill or see the form of the bill after it was reported out of Committee. Sincerely,

JAMES B. LONGLEY. Governor.

STATE OF MAINE, OFFICE OF THE GOVERNOR Augusta, Maine, February 1, 1977. Hon. Edward M. Kennedy,

U.S. Senator, Senate Office Building,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you very much for your letter of January 18 spelling out some of the details on the legislation you have recently filed to create the so-called "taxable bond option."

have had considerable interest in the entire field of governmental financing and particularly the question of bonding and bond rating as it effects the state's finances. I have briefly reviewed the material you enclosed and I have sent copies to John O'Sullivan, Commissioner of the Department of Finance and Administration, so that he may review it with the State Tax Department and may also confer with the State Treasurer in order to advise me about their feelings about the proposal. As soon as I hear from them relative to their opinions I will be in touch with you about the proposal and may have some comments to make regarding it.

Sincerely, JAMES B. LONGLEY, Governor.

> MASSACHUSETTS CITY OF LYNN, MASS. OFFICE OF THE MAYOR, March 16, 1977.

Senator EDWARD M. KENNEDY,

U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: Your letter and enclosures regarding the legislation (S. 261) proposing a 40% federal interest subsidy for State and local governments that elect to issue taxable bonds, has been received with my sincere thanks and gratitude for your action in this regard.

It goes without saying that this type of legislation will be of great benefit to all branches of government, in order to relieve

our financial burdens.

As you know, all cities live on bonding throughout every budget year and action of this type, I feel, would greatly stimulate the activities and economic development of every community.

I, therefore, endorse this Bill enthusiasti-

cally and urge its passage.

Sincerely,

ANTONIO J. MARINO, Mayor.

CITY OF HAVERHILL. MASS. March 24, 1977.

Hon. Edward M. Kennedy, John F. Kennedy Federal Building, Government Center, Boston, Mass.

DEAR SENATOR KENNEDY: As you no doubt are aware, the City of Haverhill is facing a very serious financial and economic situa-

tion. With the recent cuts in State aid to the cities and towns of the Commonwealth, the overburdened taxpayer in Haverhill can expect a substantial increase in the city's tax rate. This, coupled with other federal and state mandates, has not helped to alleviate the economic crisis that is facing an old

industrial city.

The hard-pressed cities and towns of Massachusetts can surely use an effective means of acquiring financial assistance to help ease the serious problems of obtaining capital. Therefore, I heartily endorse the "taxable bond option" which you introduced in the Senate during the month of January. Such a proposal, by lowering the interest rates that are now being paid, will help to meet the financial needs of local governments. The fact that the subsidy, as proposed, will be auto-matic with no requirement of federal approval of the bond issue and no oversight of the use of the funds is a welcomed aspect of the program.

I share your hope that Congress will act expediently on this matter as part of the

economic recovery legislation.

Sincerely yours, LEWIS C. BURTON,

Mayor.

CITY OF SALEM, MASS., March 24, 1977.

Hon, EDWARD M. KENNEDY. U.S. Senator,

Washington, D.C.

DEAR SENATOR KENNEDY: In answer to your letter pertaining to legislation (S. 261) "taxable bond option" (TBO) with 40% federal interest subsidy.

I have given this matter due deliberation and offer the following conclusions.

(1) At this time, we do not contemplate funding major capital programs, thereby curtailing the need for expanding indebt-

(2) Our previous bonding efforts were rewarded with an interest rate of 5%.

(3) Federal and State funded programs are vehicle of improving and maintaining services now and in the foreseeable future.

At present, I see no advantage in this legislation that will benefit the City of Salem. However, future events could alter the course we are presently following and mandate an accommodating point of view. This, of course, would make this legislation beneficial to us.

Thank you for your kindness and concern and my best wishes for your continued success

Sincerely,

JEAN A. LEVESQUE,

Mayor.

MICHIGAN

STATE OF MICHIGAN. OFFICE OF THE GOVERNOR, Lansing, March 7, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate.

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of January 18, 1977. I am sorry I was not able to answer it sooner.

I welcome the initiative that you, Senator Pete Williams, and Senator Dennis DeConcini took with the introduction of S. 261 creating a "taxable bond option" for state and local governments. This is a much needed alternative to the current municipal

debt financing mechanism using tax-exempt bonds only.

In the near past the range of endeavors permitted to employ tax-exempt bonds has been vastly expanded; and in Michigan, mu-nicipalities now share the market with the which finances low income housing, job development, hospital construction and loans for higher education. The State has also begun to finance huge investments in pollution control equipment for private industry through tax exempt bonds. While the

supply of these bonds has then skyrocketed, the demand has lagged far behind. The taxable bond option would expand the demand for municipal debt and help to reduce interest costs, hopefully to their pre-inflation

My only concern is that the Federal Government might consider the TBO a precedent to ultimately deny federal tax exempt treatment to state and local debt instruments, use it to begin some sort of intervention in state and local debt management or fail to fully fund corresponding interest subsidies for the entire life of the bonds sold under this alternative.

S. 261, in its present form, contains assurances against this occurrence and, as such, has my full support.

With best regards.

Sincerely,

WILLIAM G. MILLIKEN, Governor.

CITY OF MUSKEGON, MICH., OFFICE OF THE MAYOR, March 4, 1977.

Re: S. 261. Hon. EDWARD M. KENNEDY. U.S. Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: In a letter dated January 21, 1977 you requested our review and comment on your proposal to provide state and local governments a taxable bond option (TBO)

I have caused such review by our Muskegon City Manager, City Auditor/Finance Director, and City Attorney, as well as my per-

sonal interest in the Bill.

There appears to be several sound reasons for the proposal to succeed legislatively, but I would suggest only that it certainly offers to us an opportunity to use either financing option presumably to our City's benefit.

I am concerned this could be a forerunner to the legislated elimination of municipal tax-free bonding. If such should in fact ap-pear as a future threat to existing law, I

should oppose the proposal most strenuously.

Thank you for the opportunity to com-

Very sincerely,

DONALD E. JOHNSON, Mayor, City of Muskegon.

MINNESOTA

CITY OF COON RAPIDS. March 10, 1977.

Senator EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Mayor George White has given me your letter of January 21 for a reply.

Although the Coon Rapids City Council has not discussed this specific piece of legislation (S. 261) that you described in your letter, at several times in the past our City Councils have discussed the philosophy of taxable bond options.

In general, we are opposed to any such legislation and believe that municipal bonds should retain their tax exempt status. In support of this position, we would plead the separation of powers between the Federal and State governments as provided in the U.S. Constitutions. I am sure that you have heard this argument many times previously.

When legislation has been suggested previously, it often did not provide for the option of either a taxable or non-taxable bond, and it was simply felt that a taxable bond would result in our City and other localities

paying a higher interest rate.

Again, with this particular legislation which you are now proposing, the 40% Federal subsidy might or might not result in a higher interest rate to our City. We believe that a taxable bond with a 40% Federal subsidy would prove to be attractive only to taxpayer in a relatively lower income tax bracket,

and not to those who are paying taxes at a 40% or higher rate.

We appreciate your bringing this legislation to our attention; however, you must realize that we cannot support it.

Very truly yours,

J. K. COTTINGHAM, City Manager.

MISSOURI

EXECUTIVE OFFICE, STATE OF MISSOURI, Jefferson City, March 9, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senator, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of January 18, 1977 informing me of the introduction of Senate Bill 261, "Municipal Taxable Bond Alternative Act of 1977" by you and Senators DeConcini and Williams. My staff has examined its effect on Missouri, and at this time I cannot endorse the bill wholeheartedly. S.B. 261 will, in all probability, result in federal tax dollars paid by Missouri citizens being used to subsidize those states which borrow heavily. Traditionally, Missouri governments have been fiscally conservative.

I welcome the opportunity to express my concerns on the effect in Missouri of proposed federal legislation and hope you and your colleagues will continue to invite response from state officials.

Sincerely,

JOSEPH P. TEASDALE,

Governor.

CITY OF INDEPENDENCE, MO. March 7, 1977.

The Hon. EDWARD M. KENNEDY, U.S. Senate.

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for bringing to my attention the taxable bond option legislation soon to be considered by Congress

The TBO would be of benefit in broadening the market for municipal bonds and relieving some of the pressure on the tax exempt sector. This should translate to lower overall borrowing costs through increased demand for municipal bonds.

As long as the conditions within the legislation remains strictly on "option" and does not require an extensive amount of red tape, I would favor it; and, this bill

seems to meet that criteria.

A potential problem exists in Sec. (b), "(4) Election" where the Treasury Secretary prescribes the time and manner for making the election to issue a taxable bond. These items should be clearly spelled out in the bill and not left to the Treasury's discretion and interpretation, which often is far apart from the original legislative intent, i.e., arbitrage regulations.

Ideally, I would like to see the election set after opening of bids, if bids could be sought on both a taxable and nontaxable basis. This would allow us to determine our lowest net cost and base our decision on that. If the TBO election must be made before bidding, then it would have to be based on past issues and statistics. This would make it difficult to prove savings through use of 3O. Yours very truly, RICHARD A. KING, MG the TBO.

Mayor.

OFFICE OF THE MAYOR, Kansas City, Mo., March 14, 1977. Hon. EDWARD M. KENNEDY, U.S. Senator, Russell Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of January 21, 1977, concerning

legislation you have introduced in the Senate proposing a 40% federal interest subsidy for state and local governments that elect to issue taxable bonds (S. 261). As Mayor of a large U.S. city, I appreciate the fact that you are concerned about financial help for our cities.

After reviewing the proposed legislation, my reaction is generally favorable. The socalled "taxable bond option" will be helpful to cities which are in some financial difficulty and do not have free access to the credit market. It will also be helpful to cities which have access to the money market, but which are paying excessive interest rates when they issue tax exempt securities. We appreciate this "no strings" method of chan-neling assistance to financially beleaguered

In this regard, we must be certain that the rules and regulations which are developed by the administration maintain a "hands off policy. The Treasury Department may tempted to exercise some federal supervision over the issuance of municipal bonds as it has in the past. Senator Harrison Williams of New Jersey, in a speech before the Dealer Bank Association in Scottdale, Arizona, on February 5, 1977, stated that he would introduce a bill similar to last year's S. 2969 which would make the issuers of municipal bonds subject to regulation by the Securities and Exchange Commission. We object to this unconstitutional invasion of the right of the state and local governments to finance their capital needs through the issuance of tax exempt securities.

The tax exempt bond market is a very healthy and viable market today for any city which has protected its credit rating over the years. I see some abuses, such as the authorization by many states for the issuance of pollution control bonds, and an excessive use of advance refunding of outstanding bond issues simply to take advantage of a small saving in interest cost due to a slight change in the market. While I do not encourage federal regulation of either pollution control or advance refunding bonds, I believe that the legislation enacted several years ago which encouraged these methods of financing should not have been passed.

It is a pleasure to have the opportunity to comment on the proposed legislation. Open channels of communication undoubtedly will result in better legislation.

Kindest regards.

Sincerely,

CHARLES B. WHEELER, M.D., J.D., Mayor of Kansas City, Mo.

MONTANA

STATE OF MONTANA, OFFICE OF THE GOVERNOR, Helena, February 14, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR TED: Thank you for your letter of January 18, 1977, relative to your measure (S. 261) proposing a 40 per cent federal interest subsidy for state and local governments that elect to issue taxable bonds. Since receiving your letter, I've given the matter considerable study, and I am most pleased to

have the opportunity to comment on the standpoint of our state.

Montana is a capital deficient state and must, therefore, rely very heavily on "out-side" brokers and investors to market state and local bonds. Within Montana, it is primarily financial institutions that hold significant assets as state and local bonds. Such corporations are taxed at 50 per cent, so a 40 per cent subsidy would leave a 10 per cent deficiency.

Generally, I have felt that issuance of taxable bonds under any conditions enacted into law would be harmful to Montana and its political subdivisions. Many of our financial interests and several public agencies tend to share my views on the matter.

Once again, thank you for the opportunity to comment on the subject of state and local bonds tax status.

Best personal regards.

Sincerely,

THOMAS L. JUDGE,

NEBRASKA

CITY OF NORFOLK, JAMES R. MILLER, MAYOR, Norfolk, Nebr., March 7, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senator,

Senate Office Building, Washington, D.C.

DEAR Mr. SENATOR: Thank you for advising my office of your introduction of current session.

I can only speak for my small city; but, as I do this, I find I have a negative reaction your proposed legislation to wit:

A. The need, here, does not exist B. As I see it, the tax-exempt security does not cause a drain on the Treasury, because it is admitted there is a 40% reduction in the cost of financing by Cities by those who purchase them, . . . and that they, therefore, pay a full 40% at least in taxes directly back to the Cities rather than the Federal government.

C. I fear, there will be strings attached. someday, when Uncle Sam becomes involved. D. There is no guarantee the 40% contribu-

tion would not be lessened.

E. It is my fervent hope that the Metropolitan Centers will exercise personal discipline in their fiscal operation. . . . I would implore the Senate and House not to saddle us with legislation for all Cities because of the less than prudent operation of the very large Cities.

Thanking you again for your concern and courtesy, I am,

Respectfully,

JAMES R. MILLER,

Mayor.

NEVADA

THE STATE OF NEVADA, EXECUTIVE CHAMBER. Carson City, Nev., February 15, 1977. Hon. EDWARD M. KENNEDY,

U.S. Senate, Russell Office Building, Washing, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter and enclosure of January 18 regarding Senate Bill 261, which would provide interest subsidy for State and local Governments electing to issue taxable bonds. Responsive to the information you pro-

vided to me, I requested a report on the effect of the proposal on Nevada and subsequently made my views known to the Nevada Congressional Delegation. For your information, I have enclosed a copy of my letter to Senator Howard Cannon. Please be advised that I forwarded identical letters to Senator Paul Laxalt and Congressman James Santini.

Thank you again for bringing the proposed legislation to my attention.

Sincerely,

MIKE O'CALLAGHAN, Governor of Nevada.

Enclosure.

THE STATE OF NEVADA. EXECUTIVE CHAMBER, Carson City, Nev., February 15, 1977. Hon. Howard W. Cannon, U.S. Senate, Russell Office Building, Washington, D.C.

DEAR SENATOR CANNON: I am writing to inform you of the results of a report requested in regard to Senate Bill 261, which would provide interest subsidy for State and 11238

local Governments electing to issue taxable

Based on the information provided to me, it appears that governmental entities in Nevada stand to benefit from enactment of the proposal. For instance, the municipal bond market would be broadened in Nevada, and consequently these securities may pose attractive investments to such public funds as contained in the Public Employees Retirement System and the Nevada Industrial Commission. It is my understanding, how-ever, that there would be restrictions on the amount of related entities held by such agencies.

The 40 percent subsidy under the bill would also narrow the interest cost between lower and higher rated bonds. This would be of considerable advantage to Nevada because, although our bonds generally enjoy a good rating, the ratings are not of the highest degree.

In addition, indications are that passage of S. 261 would result in a much larger dollar benefit to local Governments at substantially less cost to the Federal Government than now possible. Equally important, the plan gives each entity the option of choosing to market either taxable or non-taxable bonds, depending on the entity's individual circumstances. This option represents a minimum of Federal control.

It is my belief, therefore, that S. 261 holds more benefits for Nevada than past similar bills addressing Federal interest subsidy for State and local Governments. Accordingly, I will very much appreciate your attention to this proposal and its potential effect on this State.

Sincerely,

MIKE O'CALLAGHAN, Governor of Nevada.

CITY OF LAS VEGAS, March 15, 1977.

Senator TED KENNEDY, U.S. Senate Building, Washington, D.C.

HONORABLE SIR: This letter is addressed in reference to Senate Bill #261, Municipal Tax Board Act. In the local governments, particularly in the new developing areas of the West, the need and necessity for revenues from outside sources which are purchased by bonds are the lifeblood of capital development.

We find ourselves in the State of Nevada constantly working at improving our services to our citizens. It is through capital development that we do this. Our State has a constitutional limit on the Ad Valorem (property tax) that may be collected. This happens to be \$5.00 per each \$100.00 in property value based on 35% of the market value of the property. It is within these limits that we maintain sufficient money to pay off our debt in bonds.

We pride ourselves on maintaining a very low debt per capita. We find that our bonds, particularly as they sit nontaxable, are an attractive item on the open market. We have never exceeded a 10% limitation based on the total value of our City for the amount of money we received through the sale of bonds.

We, of course, anticipate that the future development of our City, and our State, and our Country is through the bonding capacity of the various governments which maintain sound fiscal responsibility. We feel that we owe it to the citizens whom we serve to maintain the image through the sale of nontaxable Municipal Bonds. It is with a great deal of consideration that we request that you do not change the status of the Municipal Bonds with which we work.

Very truly yours,

WILLIAM E. ADAMS, P. E., City Manager.

NEW HAMPSHIRE OFFICE OF THE MAYOR,

DENNIS J. SULLIVAN, MAYOR Nashua, N.H., March 1, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senator, Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: Senate Bill 261 raises many questions that deeply concern my understanding of what causes inflation.

Basically, competitive commercial rates very greatly, depending on their respective ratings. Utility companies such as Philadelphia Electric or Public Service of New Hampshire have issued 12%% bonds with BBB ratings, whereas others with AAA ratings average 8-9%. Would this not tend to push municipals even higher, especially the risky ones? Interest on a 123/4% bond issue for twenty years would equal approximately 133% of the principal. Can we afford this? I feel sure that those who prefer nontaxable issues will find their rates influenced strongly by the competing taxable issues, and local or state units of government are in the position to compete with the private sector.

Undoubtedly, deficit spending precipitated the dire financial condition of many of our major cities. Yet, I fail to see how a "no strings attached" approach is going to help them to mind the store any better in the future than in the past. If our larger cities are in serious financial condition, and I believe they are, then stringent federal rules should be set as guide lines.

Currently, across our land, many bank stocks are at rather depressed prices, some below their book value, due in part to municipal bond investments and mortgage portfolio losses.

Would not a continuance of this condition have an adverse effect on I.R.S. income? How would large non-profit trusts affect the taxable municipal market and the expected I.R.S. revenue?

I trust that the Senator will not construe this letter as purely negative on the questions raised and urge that additional consideration be given to controlled direct community block grants for our major cities in financial straits.

In view of President Carter's recommended cut-backs in "pork barrel" waterways and dam projects, would this not be a rather large source of funding for a more practical purpose?

Respectfully yours,

DENNIS J. SULLIVAN, Mayor.

NEW *MEXICO

STATE OF NEW MEXICO, OFFICE OF THE GOVERNOR. Santa Fe, N. Mex., March 15, 1977. Hon. EDWARD M. KENNEDY,

Senator, State of Massachusetts, U.S. Senate,

Washington, D.C.

DEAR TED: I appreciate your inquiry regarding the proposed legislation (S. 261) that would create a federal subsidy for taxable municipal bonds. We would find it very difficult to support this concept at the present time.

We believe that the benefits of this legislation described in your letter would not accrue to the residents of New Mexico. Our laws establishing conservative fiscal policies have served us very well. As a result, all of our state and local issuers have ready access to the tax exempt market at favorable rates. The subsidy proposed in S. 261 would be beneficial to those states and cities who have not kept their fiscal house in order, at the expense of those who have exercised fiscal restraint

There are other strong objections that could be made. Some are: possible alteration of current tax exempt status, decrease in the autonomy of local government and the encouragement of continued heavy deficit in other areas of the U.S.

I hope you will find these comments help-

Sincerely,

JERRY APODACA, Governor.

NEW YORK

STATE OF NEW YORK, EXECUTIVE CHAMBER, Albany, N.Y., February 10, 1977.

Hon. Edward M. Kennedy, U.S. Senator, Senate Office Building, Washington, D.C.

DEAR TED: Thank you for your letter of January 18 and your proposal for a taxable bond option. As you know, I supported this proposal last year and hope to see it enacted early in this session.

The proposal is especially important for New York State since it would help to break the logjam of the municipal bond market and permit a freer flow of needed funds to states and municipalities. An option of this kind with an adequate interest subsidy (35-40 percent) would diversify the market and spread demand by providing a wider choice the investor and borrower alike. It should also be, as you say, "one of the key aspects of a new program of expanded Federal aid to State and local governments in the years ahead."

Please accept my best wishes for the speedy adoption of S. 261.

Sincerely.

HUGH L. CAREY.

NEW JERSEY

STATE OF NEW JERSEY. OFFICE OF THE GOVERNOR, Trenton, March 11, 1977.

Hon. EDWARD M. KENNEDY, Senator, Russell Senate Office Building, Senator, Russell Se Washington, D.C.

DEAR TED: I have examined S. 261 which you have introduced with Senators Williams and DeConcini. It incorporates the essential and desirable elements of the taxable municipal bond option, and it has my strong sup-

I have supported this kind of program for several years. I would be happy to assist in efforts to enact S. 261. It will provide an effective new means to assist state and local government financing efforts without federal interference in policy determinations.

The New Jersey Washington Office has been directed to advise the State Delegation of my position.

BRENDAN T. BYRNE, Governor.

OFFICE OF THE MAYOR, West Orange, N.J., February 17, 1977. Hon. Edward M. Kennedy, U.S. Senate.

Washington, D.C.

DEAR SENATOR KENNEDY: I agree with you and your colleagues that the "taxable bond issue" offers an effective, economic and "no strings" method of channeling needed Federal aid to the States.

You have my support. Very truly yours,

WILLIAM F. CUOZZI, Jr., Mayor.

CITY OF LINDEN, Union County, N.J., February 24, 1977. Hon. EDWARD M. KENNEDY, U.S. Senate.

Washington, D.C.

DEAR SENATOR KENNEDY: With reference to your recent letter regarding S. 261 creating a so-called "taxable bond option" (TBO), I for-

warded a copy of the proposed legislation to liams on once again introducing legislation our City Treasurer, and I am forwarding a copy of his comments to you.

If I can be of any further assistance, be

sure to contact me again.

Sincerely,

JOHN T. GREGORIO

Mayor.

CITY OF LINDEN. Union County, N.J., February 23, 1977.

Mayor John T. GREGORIO,

City Hall, Linden, N.J.

DEAR MAYOR: My comments on U.S. Senate bill 261 is one of mixed feelings. I feel that the accounting profession and various levels of government feel the same.

If my feelings leaned toward separate state and federal status I would oppose this bill. If my feelings were of a federal dominance over state affairs I would favor this bill. The idea of the federal government under-

writing 40% of the interest charged by State and Local Bonds appears to be an invasion of the separation of authority. The Federal Government would make these instruments of interest 100% taxable.

Weak local and state governments would welcome this bill. Possible uninterested investors in certain cases would feel more se-

cure in this type of situation.

The Federal government has been trying for some time to eliminate this tax free status of State and Local bonds. I would think this would be the first step in accomplishing their attempt to make all these bonds taxable.

As you can see I have mixed feelings on this type of bill, but many taxpayers of the United States would oppose this bill.

Very truly yours, CHARLES S. VALANO, Jr., City Treasurer.

THE CITY OF EAST ORANGE. OFFICE OF THE MAYOR. East Orange, N.J., March 1, 1977.

Senator EDWARD M. KENNEDY,

U.S. Senate.

Washington, D.C.

DEAR SENATOR KENNEDY: I wholeheartedly support the Taxable Bond Option legislation (S. 261) which you recently introduced in the Senate.

The proposed 40% federal interest subsidy will prove to be very helpful for our bond issue and will be beneficial towards alleviating the financial crisis confronting our Nation's cities.

We are hopeful that it will be favorably received by the new Congress in the Carter Administration.

Sincerely,

WILLIAM S. HART, Sr., Mayor.

TOWNSHIP OF PARSIPPANY-TROY HILLS, Parsippany, N.J., March 7, 1977.

Hon. EDWARD KENNEDY, Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: After reviewing Bill S. 216, I believe the legislation would be welcome on the local level government.

The concept of interest subsidies from the federal government would have a dramatic impact on local tax rates.

That portion of local taxes which is presently appropriated for interest payments on bonds would be available to expand existing programs or to provide tax relief, whichever would best serve a community.

The idea of federal interest subsidies is also an innovative way of returning federal tax dollars to the community.

I congratulate you and Senator Pete Wil-

designed to serve the citizenry of the country. Very truly yours,

JOHN T. FAHY. Mayor.

IRVINGTON, N.J., March 8, 1977.

Hon. EDWARD M. KENNEDY. U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: In reply to your letter seeking comments and reactions to your proposal of 40% federal interest subsidy for State and local governments that elect to issue taxable bonds, let me say that I am strongly opposed to any type of legislation that would subject Municipal Bonds to any type of taxation. The taxing of Municipal Bonds could seriously affect the Market Place for the selling of Municipal Bonds, even though, as you state, there is a Federal subsidy on the interest.

Those in government are very leary of becoming reliant on any type of State and Federal aid for fear it could be taken from us and we could be left holding the bag.

For some time now, there has been a great deal of discussion on taxing Municipal Bonds, and this legislation would appear to be the first step in taking away the exempt status of Municipal Bonds which would then eliminate the primary advantage of this type of bond.

Sincerely yours,
ROBERT H. MILLER, Mayor.

OHIO CITY OF PARMA, OHIO, February 18, 1977.

Hon. EDWARD M. KENNEDY. Senator from Massachusetts, Washington, D.C.

DEAR SIR: I have reviewed quite seriously your proposed legislation (S. 261) concerning federal subsidy for taxable bonds issued by local furisdictions.

First of all may I say that I appreciate your interest in our problems and believe me many smaller cities have the same problems as the large metropolitan areas. The City of Parma is the ninth largest in the State of Ohio and because of our boundaries with the City of Cleveland, we automatically inherit many of their problems. We currently are planning no large improvement pro-grams or, for that matter, any borrowing of any kind in an attempt to maintain our tax rate and help our residents in these trying times. However, should we have to borrow for government purposes it would be a tremendous help to have the alternative to either using tax exempted and/or taxable bonds with federal subsidies as a means of providing our operating necessities.

I would appreciate any further comments you might have about any more information as it develops on this subject.

My sincere best wishes. Very truly yours,

JOHN PETRUSKA, Mayor.

CITY OF BROOK PARK, Brook Park, Ohio, February 22, 1977. Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: This letter is in response to your letter of January 21, 1977, received in my office on February 17, 1977, with reference to the TBO Option on interest

expense on the issuance of taxable bonds.

The City of Brook Park is very much interested in this type of option. I think it would encourage the communities to issue debentures if they knew that they were going to receive some form of interest reduction on bond payoffs. I do believe this is a step in the right direction, and I am interested in finding more out on this particular bill and knowing which direction the bill is going

Respectfully yours,

ANGELO WEDO, Mayor.

Office of the City Commission, Dayton, Ohio, March 14, 1977. Hon. EDWARD M. KENNEDY,

Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter requesting my comments on the taxable bond option (TBO) proposal recently introduced in the Senate.

Last year I personally endorsed the objectives of your Municipal Capital Market Improvement Act which also would have provided a 40% Federal interest subsidy for local government debt. The TBO would indeed broaden investor interest in such securities and act to stabilize the market in my opinion.

I strongly believe, however, any subsidy appropriation must be permanent. Annual appropriations would only increase the uncertainty for local government issuers and investors alike. And, quite frankly, because of the difficulty in obtaining permanent appropriations for General Revenue Sharing, I am not convinced that a subsidy appropriation spanning the average 20-year life of municipal bonds is at all likely.

I sincerely appreciate the opportunity to comment on the TBO. You and Senators Pete Williams and Dennis DeConcini are to be commended for advancing a practical ap-proach to solving some of the capital financing problems now facing municipalities.

Yours very truly,

JAMES H. MCGEE.

ELYRIA, OHIO, March 14, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senator, Senate Office Building, Wash-ington, D.C.

DEAR SENATOR KENNEDY: If my interpretation of your proposal on taxable bonds is correct, I cannot favor such a move.

Opening the door to allow school, municipal, or other governmental bonds to become taxable removes one of the key aspects which makes them so desirable.

You state that this would be a taxable bond "option". My fear is once it becomes an option, then it will become standard. If this happens, governmental agencies will be forced to compete on the standard stock and bond market.

The fourth paragraph in your letter states, and I quote, "I believe that the TBO offers an effective economic and no strings method of channeling needed federal aid to the states". I have yet to see such legislation as "no strings" passed by the federal govern-ment. Other systems have been set up to channel money to state and local governments with this same approach. As time passes, we are so entwined in strings it is impossible to move.

Your intentions may be honorable but I have to say that I prefer you look to other areas rather than taxable bonds.

Sincerely

MARGUERITE E. BOWMAN, Mayor, City of Elyria.

PENNSYLVANIA

CITY OF ALLENTOWN, PA. March 2, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: After a careful review of your proposed legislation pertain-ing to the "taxable bond option" (TBO) and relevant background material associated with this approach, I firmly believe that it will provide benefits to municipal governments that must deal in the very fluid bond market to secure funding for their needed capital programs.

While the City of Allentown has been very fortunate in its funding efforts in the municipal bond market because of our excellent bond ratings, I recognize though that many cities throughout our country have had and will continue to have difficult times raising needed capital through the municipal bond market; hence, there is a need for this legislation.

This proposed legislation directly faces the concern expressed by many that the demand for bonds in the tax-exempt municipal bond market has been insufficient to absorb the supply without increases in interest. As interest costs increase for municipal governments, total debt service costs proliferate and the amount of capital project activities that can be assumed must be reduced. A good aspect of this legislation is that it should stabilize this supply-demand equation in the municipal bond market by appealing to investors heretofore not interested in tax-exempt bonds.

Another strong point is that any local government does not need federal approval when taxable bonds would be issued. The automatic payment of the federal interest subsidy provides what approaches the ideal situation where local governments do not incur additional time-consuming and often complicated requirements to comply with federal programs. This is a very commendable aspect of your proposed legislation.

In this rather unstable economic period, municipal governments have found it increasingly difficult to maintain basic service levels, let alone provide new services and programs. The tax base of many cities, especially those in the northeast, like Allentown, supported primarily by real estate lev-les, is not growing at a rate to keep up with the increasing cost of living. In the absence of some innovative legislation, the long-term outlook is not optimistic.

While it is not a panacea, I consider the taxable bond option as a very positive par-tial approach to meet the long-term and varied financial needs of municipal govern-

I support your taxable bond option legis lation, and sincerely hope that its passage will be the foundation for other innovative financial support for municipal governments. Sincerely, JOSEPH S. DADDONA, Mayor.

THE CITY OF YORK, PA., March 3, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C. SENATOR KENNEDY: I wish to acknowledge receipt of your letter of January 21, 1977, wherein you express desire to re ceive commitments relative to Senate Bill 261, cited as the Municipal Taxable Bond Alternative Act of 1977.

I would like to make a couple of observations relative to this proposed legislation. First of all, the Taxable Bond Option would provide a "relief valve" for municipalities that do not enjoy a favorable credit rating, thus enabling them to market tax exempt bonds. They could, of course, with the passage of your proposed legislation, turn to taxable bonds and in all probability still enjoy a very favorable interest rate. If the Taxable Bond Option becomes law, it would possibly open the bond market to more investors. People who do not normally buy tax exempt bonds may consider buying taxable municipal bonds. In my opinion, the use of the Taxable Bond Option, if passed, would to a great degree depend upon market conditions at the time when a municipality wishes to bring an issue to market. These market conditions would pretty much indicate the option that would be chosen by the municipality; i.e., taxable vs. tax exempt.

A concern that I have, however, as a result of reading through the Congressional Record and the Bill, is one relative to Federal involvement. You speak to a minimum amount of Federal involvement, and as you have the legislation written it appears as though this would be the case. I cannot help but recall other Federal legislation involving local government that was written in a similar fashion, and the regulations prepared by various agencies implementing the legislation created a situation wherein the original intent of the law was weakened severely. I would hope that this would not be the case if Senate Bill 261 is, in fact, ultimately passed.

As an elected local government official and Mayor of a city, I am certain that you can realize that I would naturally have concern relative to further restrictions that would prove to be a burden on city government; therefore, I would ask, Mr. Senator, that you continue in your endeavors relative to this proposed legislation to keep the Federal restrictions to a minimum. If this cannot be done, I feel that the intent of the legislation will be defeated by regulations imposed.

I wish to thank you for giving me an opportunity to share my thoughts with you your Municipal Taxable Bond relative to Alternative Act of 1977.

Sincerely yours,

JOHN D. KROUT, Mayor.

CITY OF PHILADELPHIA, April 7, 1977.

Hon. EDWARD M. KENNEDY,

U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: We have considered S. 261 and are favorably disposed to it.

We believe that a Federal subsidy of 40% of the interest on taxable bond issues would make such issues attractive to a substantial number of both individual and institutional investors who for one reason or another are not now among those investing in the City's tax-free obligations.

As we interpret the Bill, it would require that all the bonds of a specific issue be made taxable should the City elect to issue taxable bonds.

On the other hand, it is our belief that the Bill would not preclude our offering simultaneously or in near proximity other bond issues in respect to which interest

would be tax free.

Because this legislation would act to expand the market for municipal bonds, it has our full support subject to the foregoing stated assumption.

Sincerely

FRANK L. RIZZO.

RHODE ISLAND

CITY HALL,

Newport, R.I., February 25, 1977.

Hon. Edward M. Kennedy, Senator from Massachusetts, Senate Office

Building, Washington, D.C.
DEAR SENATOR KENNEDY: I am writing in response to your letter of January 21, 1977, concerning legislation you have introduced for a taxable bond option for municipal bonds with a 40% federal subsidy of the interest costs.

The only questions which have been raised locally concerning this legislation are:

1. Will it be used at a later date to take away the tax exempt status of Municipal and State Bonds?

2. At some future date would the Federal Government refuse to appropriate the subsidy, leaving the municipal governments with a balance of high interest rates to cover?

Inasmuch as these are questions concerning the intent of, or faith in, the Federal Government, they are not of practical significance in opposing the legislation.

For your information, the City of Newport bond issues have been small enough to market within the State so that we have not been forced to go to the National market. However, I strongly support any legislation which is designed to give us that option and I appreciate your efforts in behalf of the hard-pressed municipalities.

Sincerely, HUMPHREY J. DONNELLY III, Mayor.

SOUTH DAKOTA

STATE OF SOUTH DAKOTA, Pierre, February 25, 1977.

Sen. EDWARD M. KENNEDY. U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your information letter on the Taxable Bonding Options legislation proposal (S. 261) that you have introduced to the United States Senate.

As states look into the future development of their resources, finance options are generally quite limited. This legislation would indeed provide states with a new option for financing capital improvements and economic development. It would give states access to a new portion of the investment market place. Indeed, I support such legislation.

The existing tax exempt bonding mechanism has served and continues to serve South Dakota's need quite well. It has consistently provided us with a good bond rating and the selling of our bonds in the market place has never been difficult. Yet, I recognize our obligations as public servants to correct those inefficiencies and to maximize the public's tax dollar. That is what is involved here-a chance to increase the amount of benefits to the states per federal dollar involved from sixty-seven cents to seven dollars.

If our eyes are to be to the future, we must move to expand the financial base upon which these entities rest. Competing in the taxable bond market place for investment dollars would be one means of doing this.

Again, I support your efforts to make this option available and wish you all of the best in your endeavor. With every best wish, I remain

Sincerely.

RICHARD F. KNEIP, Governor.

TENNESSEE

STATE OF TENNESSEE. EXECUTIVE CHAMBER Nashville, January 28, 1977.

Hon. Edward M. Kennedy, Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of January 18, 1977, with enclosure requesting my views on S. 261.

I am familiar with the provisions of this proposed legislation and share your view that it offers an effective, practical, and economic method of providing Federal financial assistance to help state and local governments without intrusion into their affairs. I have communicated my interest to the Tennessee Congressional Delegation and have asked that they support the measure.

I believe enactment of this legislation will ultimately serve to reduce Federal costs and encourage private sector investment. I applaud your initiative and hope your efforts prove to be fruitful.

RAY BLANTON, Governor. CITY OF KNOXVILLE, TENN., City Hall Park, April 5, 1977.

Hon. EDWARD M. KENNEDY,

U.S. Senator, Washington, D.C.

Re S. 261, 40 percent Federal Subsidy on Municipal Taxable Bonds.

DEAR SENATOR KENNEDY: I apologize for being so delinquent in responding to your letter of January 21, 1977, concerning the proposed legislation on the above-referenced subject.

I am aware that you have been instrumental in authorizing legislation to aid in the recovery of the general economy of the nation, and I want to take this opportunity to commend you on your efforts in this regard. I feel that the legislation regarding the Federal subsidy on municipal taxable bonds has considerable merit in that it does. indeed offer State and Local governments an alternative in the method of funding an ever increasing need for capital funds. This proposed additional method is particularly important in that it does not preclude nor interfere with the option to issue non-taxable indebtedness. This option would obviously permit more financial institutions to enter the market and compete for available dollars. However, I do not feel that the option of municipal taxable bonds is without limitations. The greatest potential problem, and perhaps a probability, is that taxable bonds would drive the interest rate high enough to defeat the purpose and intent of the 40 percent Federal subsidy. For example, it would take a taxable bond issue of 12 percent in order for the purchase to be profitable if the purchaser of the bonds was in a 50 percent bracket. Most banks and individuals who purchase non-taxable municipal bonds happen to be in the 50 percent bracket. If these bonds could sell at a rate as low as 10 percent in today's market, such institutions as savings and loan associations and savings banks and pension funds would be attracted, and most of these institutions are in a 30 percent tax bracket. A large portion of such bonds would, in all likelihood, be placed in retirement and pension funds. Thus, the taxpayer would ultimately subsidize the higher cost of money to the government since these funds pay no taxes. Additionally, the possibility that non-credit worthy institutions would be able to enter the market and compete for dollars must be guarded against.

In conclusion, I feel that the merits of this legislation far outweigh the demerits and that it offers a viable alternative to the funding of capital needs of State and Local governments. I wish you success in your efforts to get this legislation approved by the House Senate. If I could be of assistance in your endeavor, please do not hesitate to con-

Yours truly.

RANDY TYREE Mayor.

CITY OF AMARILLO, Amarillo, Tex., February 22, 1977.

Hon. EDWARD M. KENNEDY,

U.S. Senate,

tact me.

Washington, D.C.

DEAR SENATOR KENNEDY: Reference is made to your letter of January 21, 1977 enclosing a copy of Senate Bill 261 and requesting comments.

We in Amarillo, are opposed to taxable bond option legislation. We have not found any difficulty in marketing the City of Amarillo Bonds.

The contents of the Bill have been reviewed and we are not convinced that this proposed subsidy is the answer to the fiscal problems of many of our cities. Are you going to encourage fiscal irresponsibility with such a Federal subsidy? We hope not.

Again, as stated above, we are opposed to this taxable bond option legislation. Sincerely,

JOHN C DRUMMOND, Mayor.

CITY OF AUSTIN. OFFICE OF THE MAYOR, March 3, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate, Washington, D.C.

Re S-262: Municipal Taxable Bond Alternative Act of 1977.

DEAR SENATOR KENNEDY: Like the swallows to Capistrano, the senate bill proposing waiving of the tax exempt status by cities

has surfaced again in January.

The City of Austin does not endorse any alteration of the present exemption of local government bond interest. There has been no demonstration to us of the need to expand the municipal market, and the taxable bond proposal would not do this. Under the proposed attraction of reducing taxes for almost every citizen, the taxable bond proposal would in fact increase the taxes of almost every taxpayer in the nation. The taxable bond would allow the Federal government deeply into the business of financing schools, roads, mental institutions, and other public projects.

The proposed legislation, obviously in support of poorly managed and destitute cities primarily in the northeastern section of the United States, serves no useful purpose to provident municipal government. The obvious inconsistencies of the bill, on the one hand disclaiming any material deviation from the current practice yet in the same breath praising substantial differences in savings to the taxpayer, are direct opposites. As a provident city, we in Austin, Texas resent the wordbending of the phrase "Federal tax subsidy."

A taxable municipal bond would displace local government marketing channels that have served our City well. Most importantly, there is the increased inherent danger of federal control and the loss of basic determination and decision-making authority.

The City of Austin feels that the taxable

bond proposal merits further analysis and very careful deliberation. Now is not the time for its enaction since its practical justification has not been made to us.

Sincerely,

JEFFREY M. FRIEDMAN,

MO Mayor.

> CITY OF DALLAS, March 7, 1977.

Senator EDWARD KENNEDY, U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: In February 1976, members of the Dallas City Council reviewed a proposal known as "The Municipal Capital Market Improvement Act" (S. 2800). At that time, by resolution of the City Council, the Council requested the Texas Congressional delegation to oppose the adoption of this bill

Recently our comments and reaction were solicited on proposed legislation (S. 261) the "taxable bond option." This proposal would allow State and local governments the option to issue taxable obligations and receive a Federal subsidy of 40% of the interest yield of such securities.

In keeping with our earlier decision, the City of Dallas cannot support it because we believe it is fundamentally wrong. It infringes upon the basic rights and freedoms given to local and state governments in the Constitution and in Supreme Court case law thereof. One case in point is the Supreme

Court decision in Mercantile Bank v. City of New York, 7 Sup. Ct. 826, (1887) which said.

"Bonds issued by the State of New York or under its authority by its public body, are means for carrying on the work of government, and are not taxable even by the United States, and it is not a part of the policy of the government which issues them to subject them to taxation for its own purposes."

Also disconcerting, despite assurances to

the contrary, are:
The impact that the taxable bond option would have on municipalities that choose the Federal subsidy option. Will they be as attractive and competitive as other taxable issues? (i.e. large corporations or utility issues?) It's doubtful. And the impact could severely limit this market for municipalities.

The increased tax burden upon local taxpayers who must support another Federal subsidy program.

The provisions which were included to gather local and state government support could be altered or eliminated by later Congressional action.

A proposal which appears to support excessive debt and fiscal irresponsibility, and the cost for such a proposal will be by those whose fiscal house is in order.

For these reasons, the City of Dallas cannot support your proposal and will actively oppose it through the Texas Congressional delegation. I hope that these points will be considered in the deliberation of this bill.

On behalf of the members of the City Council, I want to extend my appreciation to you for the service you're performing for our country and the opportunity you've given the City of Dallas to participate in the legislative process.

Sincerely,

ROBERT S. FOLSOM, Mayor.

CITY OF WICHITA FALLS, OFFICE OF CITY MANAGER, Wichita Falls, Tex., March 30, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate, Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: I am in receipt of your letter dated January 21, 1977 to Mayor J. C. Boyd concerning the introduction of S. 261. This legislation would provide for a 40% federal interest subsidy for state and local governments electing to issue taxable bonds.

It is my firm belief that the present non-taxable status for municipal bonds with market conditions determining interest rates is the best situation for local and state governments. There is no way in my mind that a federal interest subsidy would be offered with no federal strings attached. Therefore, would oppose S. 261 as being unnecessary at this time and a possible infringement on states and local rights.

If you have any further questions on this regard, feel free to contact me. I appreciate the opportunity to comment upon this piece of legislation.

Very truly yours,

GERALD G. FOX, City Manager.

VIRGINIA

COMMONWEALTH OF VIRGINIA, OFFICE OF THE GOVERNOR, Richmond, Va., February 23, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Governor Godwin has requested that I respond to your letter of January 18 concerning legislation introduced by you and Senators Williams and DeConcini (S. 261) proposing a 40% federal interest subsidy for State and local governments that elect to issue taxable bonds.

The concept is an intriguing one and does have appeal for those States and localities that have credit problems. Fortunately, Virginia is not one of those, and we are of the opinion that the taxable bond option device is another inroad by the Federal government into affairs which have traditionally been the prerogative of State and local governments. Also, should the taxable bond option be enacted, the question of the permanence of the subsidy would be a matter of grave concern.

We appreciate your asking for our com-ments, but at this time we must register our opposition to the concept.

Sincerely,

MAURICE B. ROWE, Secretary of Administration and Finance.

SUFFOLK BICENTENNIAL CITY, OF-FICE OF THE MAYOR AND CITY COUNCIL.

Suffolk, Va., March 16, 1977.

Sen. EDWARD M. KENNEDY,

U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: This is in response to your letter of January 21, 1977 pertaining to the legislation which you are co-sponsoring to create a "taxable bond option"

I must say that my initial reaction to this legislation was negative for fear that local governments would loose the ability to issue tax exempt bonds. However, after extensive review of this legislation, I feel that its passage would be beneficial to local governments provided that there are sufficient mechanisms to guard tax exempt status for those municipalities desiring to pursue this

I thank you for giving me an opportunity to comment on this matter. Should you have further questions, please do not hesitate to call upon me.

Sincerely yours,

JAMES F. HOPE, Mayor.

WASHINGTON

STATE OF WASHINGTON, OFFICE OF THE GOVERNOR Olympia, March 23, 1977.

Hon. EDWARD M. KENNEDY,

U.S. Senate,

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for the information related to S. 261 proposing a 40 percent Federal interest subsidy for state and local governments that elect to issue taxable bonds.

This question has never been seriously addressed in Washington State to the best of my knowledge. We are not experiencing any difficulty in financing with tax exempt bonds

issued in the usual manner.

I must say, I have some reluctance to assist in programs dependent on Federal revenues when another acceptable alternative is available, and while it may be true that tax exemption now granted municipal and state securities represents an indirect subsidy, continuation of that procedure does not entail any positive action on the part of the Federal government over long periods of time such as fifty years.

Sincerely,

DIXY LEE RAY, Governor.

Office of the Mayor, Bellingham, Wash., February 25, 1977. Hon. Edward M. Kennedy, U.S. Senate, Old Senate Office Building, Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for your letter of January 21st regarding the proposed 40-percent federal interest subsidy

for state and local governments that elect to issue taxable bonds.

In reviewing the proposed legislation, have come to the conclusion that it would be of doubtful benefit to the City of Bellingham.

In your letter you state that the proposal is to assist financially plagued cities who are having trouble raising capital on the open market. The City of Bellingham does not fall into this category.

We feel the overall effect of the program will probably be to drive all interest rates up because of the placing of governmental issues in competition with present corporate issues. The law of supply and demand of dollars bidding for more issues will drive the interest costs up.

One other factor that concerns us is the feeling that this would only be the first step in eliminating the tax exempt issues, which has been considered before. Secondly, we have the concern that the Federal Government might find the subsidy so high that the subsidy rate would be reduced and/or elimi-

I do appreciate your giving us the opportunity to express to you our ideas on your proposed legislation.

Sincerely,

KEN HERTZ, Mayor, City of Bellingham.

CITY OF SEATTLE, OFFICE OF THE MAYOR, March 10, 1977.

Hon, EDWARD M. KENNEDY. U.S. Senate.

Washington, D.C.

DEAR SENATOR KENNEDY: Thank you for soliciting my comments concerning S. 261 which you and Senators DeConcini and Williams introduced. This legislation would offer much greater flexibility to state and local government entities in the selling of bonds.

This legislation is particularly welcome because it allows a City issuing bonds to elect a subsidized taxable or a tax exempt option separately for each issue. This means we can take advantage of whichever option is most advantageous to us at a given point in time.

Since many corporate issues are presently yielding about 8.25 to 8.5 percent and since this City's AA bond rating should permit us to obtain a similar rate Seattle would almost certainly benefit from this legislation under present market conditions. We are presently considering an \$8.8 million general obligation issue. We had hoped for an interest rate of about 5.5 percent. This legislation could reduce what we would have to pay to perhaps 5.1 percent. This could save the City about \$25,000 per year for 20 years. One unknown factor is the willingness of

investors to forego the tax advantages offered under the present law. Seattle does not now have any difficulties in marketing its bonds in the tax exempt market. Whether we might be less successful in the taxable market is an open question.

However, I believe that the very tangible advantages which this legislation offers to state and local governments far outweigh any possible disadvantages in the bond mar-

Thank you again for asking me to com-ment about this excellent legislation. I wish you the best of luck in securing its passage and stand ready to assist you in your efforts to do so.

Sincerely.

WES UHLMAN, Mayor

FEBRUARY 16, 1977.

Hon. EDWARD M. KENNEDY, U.S. Senate,

Russell Senate Office Building

Washington, D.C.

DEAR SENATOR KENNEDY: It was with considerable interest that I noted the introduction of S. 261, the Municipal Taxable Bond Alternative Act of 1977, a bill to provide a 40% Federal interest subsidy for state and local governments that elect to issue taxable bonds

As I stated to you in my letter of January 23, 1976, in support of S. 2800, my position on this issue is consistent with that of the Municipal Finance Officers Association (MFOA), i.e., in opposition to anything that infringes on tax exemption and its free use for legitimate governmental purposes. The key features of this legislation as I see them are: completely free and irrevocable option by the issuer: preservation of the interest subsidy; absence of Federal involvement in state and local affairs; the permanent appropriation; and the automatic qualification fea-

Mr. Andre Blum, Director of Administration for the City of Madison, testified on June 7, 1976 before the Finance Committee of the United States Senate on S. 2800. He represented the Municipal Finance Officers Association, but was also expressing my sentiments. A copy of his testimony is attached, along with the most recent MFOA resolution relating to the taxable bond option.

As I stated in my earlier letter, there is another issue which should also be addressed during consideration of TBO legislation, i.e., the proliferation of tax exempt pollution control, industrial development and advance refunding bonds. If we are to address the problem of a saturated tax exempt bond market, it would seem reasonable that these non-public improvement related securities should be severely reduced or completely eliminated. Although there may be reasonable difference of opinion regarding the Fedintrusion into the municipal bond market, I believe all issuers are united in their support of a free and continuing market for tax exempt bonds. I hope you will be able to take some meaningful action to limit these non-essential tax exempt bonds.

Sincerely.

PAUL R. SOGLIN. Mayor.

MFOA ANNUAL CONFERENCE-MFOA RESOLUTIONS

MFOA members have adopted the following resolutions of prime importance to municipal finance officials. Should there be any questions or comments regarding these resolutions, please contact: MFOA, 1313 East 60th Street, Chicago, IL 60637. 312/947-2550. These resolutions were adopted Wednesday, May 5, 1976 at the MFOA Annual Conference in San Francisco, California.

TAXABLE BOND OPTION

Whereas, the Municipal Finance Officers Association both has defended and sought to strengthen the present system of tax-exemption of interest on municipal bonds, the attributes of which are contained in its pol-

icy of May 28, 1969 which required:
1. Conformity to the Constitution, preserving the Federal system by protecting state and local governments from Federal com-

2. Freedom from Federal controls of policy decisions which are properly the sole province of state and local governments.

3. A saving in the cost of borrowing—with-

which the present urban crisis would become more aggravated by requiring increased property, sales and other local taxes, and a reduction in essential services.

4. Freedom from the uncertainties of the

recurrent annual federal appropriation process to obtain state and municipal capital needs or any portion of their interest costs.

5. Protection of and freedom of access to viable capital markets of their own choice without reliance on a dominant Federal fi-

nancial institution.

6. Expedition in their borrowing, free of the delay of Federal clearances which can make them miss their optimum interest market timing and can force them into increased

capital costs as construction costs continue to rise: and.

Whereas, the Association has sought in ways that are consistent with the above policy to assist in the resolution of the fiscal dilemma of many governmental borrowers and to moderate the strains that occur from time to time in the market for their obligations.

Therefore, be it resolved, that the Municipal Finance Officers Association believes that the present proposed legislation to provide for a taxable bond option for state and local government issuers in its current form does not conform with the above stated long-standing policy and is not in the best instate and local governments until it is modified to ensure that the benefits to state and local government are compatible with those inherent in the tax-exemption of municipal bonds. In particular, any tax-able bond option legislation should contain the following features:

1. Ease of borrowing must be retained and there must be freedom from procedural un-

certainties and delay.

2. Any exercise of an option shall be as to an individual issue of bonds and not preclude future issuance on a tax-exempt basis.

3. The federal interest portion shall be fully guaranteed and beyond question as to the continuing fulfillment of the federal government's pledge.

4. Any such option should be restricted to governmentally-owned and operated facili-

ties and their activities.

The MFOA Executive Board, through its Governmental Debt Administration Committee, is authorized and directed to work with interested groups in. . . .

STATEMENT OF ANDRE BLUM

My name is Andre Blum, Director of Administration for the City of Madison, Wis-consin and a member of the Municipal Finance Officers Association Committee on Governmental Debt Administration. With me is Michael S. Zarin, Chief, Finance Division, Law Department of the Port Authority of York and New Jersey and also a member of the Committee on Governmental Debt Administration of the MFOA. The Municipal Finance Officers Association of the United States and Canada represents 5,500 members who are Federal, State and local government financial officials, appointive or elective, and public finance specialists.

I will direct my testimony to the three considerations before us today concerning proposals that would affect the present tax-exempt market for municipal securities. These issues are a taxable bond option, imposition of a minimum tax on the currently tax-exempt interest from municipal bonds, and the repeal of tax-exemption.

THE TAXABLE BOND OPTION

The MFOA does not support either of the current proposals on a taxable bond option— S. 3211, Senator Kennedy's bill, or H.R. 12774 the bill reported by the House Ways and Means Committee. However, at its Annual Conference in San Francisco May 2-6, the MFOA membership adopted a resolution, a copy which is attached as Appendix "A", which acepts the concept of a taxable bond option provided it meets the following cri-

It must retain the ease of borrowing and there must be freedom from procedural uncertainties and delay;

Any exercise of an option shall be as to an individual issue of bonds and shall not preclude future issuance on a tax-exempt

The federal interest portion shall be fully guaranteed and beyond question as to the continuing fulfillment of the federal govern-ment's pledge; and

Any such option should be restricted to

governmentally owned and operated facilities and their activities.

These four criteria, MFOA feels, would strengthen the present system of tax-exemption of interest on municipal bonds and maintain the attributes of the present market which are outlined in the Association's long-standing policy. Essentially, these attriunquestionable constitutionbutes are (1) ality, (2) freedom from federal controls, (3) saving in interest costs, (4) freedom from the uncertainties of recurrent annual federal appropriation processes, (5) retention of viacompetitive private marketing channels (6) expedition in borowing, free from the delay of federal clearance.

At this point, it is only fair to say that although the resolution was accepted by a majority of the MFOA membership, there remains a basic disagreement whether or not a taxable bond option could be consistent with the preservation of the tax-exempt market. That debate—and both sides are well-represented in our group-has both its economic and political dimensions.

Despite the difficulties in the application of our criteria, we do think they accurately reflect what should be targets (or constraints) for federal policy in the area. For unless an alternative such as the taxable bond option can be shown to be congenial with such criteria, then the path of policy is clearly one leading to operation.

With this perspective in mind, the MFOA is pledged to working with Congress as well other interested groups to perfect tax-

able bond option legislation.

In spite of our mixed emotions on the taxable bond option issue, the Association is sensitive to the need to broaden and make more efficient the market for the debt of all borrowers. To that effect, the MFOA membership also adopted a resolution (a copy of which is attached as Appendix "B") calling for Congress to amend the Internal Revenue code to permit the pass through of taxexempt interest income to the shareholders of regulated investment companies (mutual

PRESERVING THE TAX-EXEMPTION OF MUNICIPAL SECURITIES

Our position on the retention of taxexemption for traditional governmental purposes is unequivocal: We oppose any changes in the existing law that would deny its use or diminish its value for legitimate state and local governmental purposes. These changes would include a minimum tax on the interest of municipal securities and the repeal of tax-exemption in its entirety.

We have also been asked by the National League of Cities and the National Association of Counties to inform you that their policy positions are in concert with ours.

Therefore, I believe that the issues involved in a taxable bond option or other alternatives can be much more clearly drawn if such market-assisting proposals are not combined with measures to tax, directly or indirectly, the interest income on conventional municipal bonds. This combination occurred in the Tax Reform package the House passed in 1969; to proffer a trade of a taxable bond option for the taxation of the tax-exempt bond was hardly to offer an appealing alternative. I can assure the Committee that were such an "alternative" to be placed before issuers again the reaction would be instant and widespread. I strongly urge that the Committee keep the optional concept a meaningful one and not attach to it tax changes that either would erode its value or undermine the value of tax-exemption. Surely not a worse time could be found to propose to tax traditional tax-exempt securities and to add to the already heavy burdens and uncertainties of state and local finance.

This ends my testimony. We will be happy to answer any questions you have.

APPENDIX A

RESOLUTION ON TAXABLE BOND OPTION

Whereas the Municipal Finance Officers Association both has defended and sought to strengthen the present system of tax-exemption of interest on municipal bonds, the attributes of which are contained in its policy of May 28, 1969 which required:

- 1. Conformity to the Constitution, preserving the Federal system by protecting state and local governments from Federal compulsion.
- 2. Freedom from Federal controls of policy decisions which are properly the sole pro-vince of state and local governments.
- 3. A saving in the cost of borrowing—with-out which the present urban crisis would become more aggravated by requiring creased property, sales and other local taxes, and a reduction in essential services.
- 4. Freedom from the uncertainties of the recurrent annual Federal appropriation process to obtain state and municipal capital needs or any portion of their interest costs.

5. Protection of and freedom of access to viable capital markets of their own choice without reliance on a dominant Federal fi-

nancial institution.

6. Expedition in their borrowing, free of the delay of Federal clearances which can make them miss their optimum interest market them miss their optimize them into in-creased capital costs as construction costs continue to rise.

Whereas the Association has sought in ways that are consistent with the above policy to assist in the resolution of the fiscal dilemma of many governmental borrowers and to moderate the strains that occur from time to time in the market for their obligations.

Therefore be it resolved that the Municipal Finance Officers Association believes that the present proposed legislation to provide for taxable bond option for state and local government issuers in its current form does not conform with the above stated longstanding policy and is not in the best interests of state and local governments until it is modified to ensure that the benefits to state and local government are compatible with those inherent in the tax-exemption of municipal bonds. In particular, any taxable bond option legislation should contain the following features:

1. Ease of borrowing must be retained and there must be freedom from procedural un-

certainties and delay.

2. Any exercise of an option shall be as to an individual issue of bonds and not preclude future issuance on a tax-exempt basis.

3. The Federal interest portion shall be fully guaranteed and beyond question as to the continuing fulfillment of the Federal government's pledge.

4. Any such option should be restricted to governmentally owned and operated facil-

ities and their activities.

The MFOA Executive Board, through its Governmental Debt Administration Committee, is authorized and directed to work with interested groups in perfecting legislation and is to report back to the membership its progress in implementing this policy and to recommend further policy as may be appropriate.

Adopted May 5, 1976.

APPENDIX B

RESOLUTION ON PERMITTING MUTUAL FUND INVESTMENT IN MUNICIPAL SECURITIES

Whereas, the MFOA supports efforts to broaden the municipal bond market by promoting greater investment interest in and competition for municipal securities as a means to lowering borrowing costs and stabilizing the flow of credit to state and local borrowers, and

Whereas, mutual funds and other regulated investment companies under the Internal Revenue Code are not permitted to through tax-exempt interest income to their shareholders and this treatment is inconsistent with prevailing theory of mutual fund taxation which is to place such shareholders in the same position as if they owned the securities directly, and

Whereas, the present liability to pass through tax-exempt income unfairly denies investors that prefer to use this investment medium certain advantages of convenient investment techniques, diversification, and professional management when it comes to investment in tax-exempt securities, and

Whereas, the consequent inability of state and local governmental borrowers to enjoy the advantages of investment by mutual funds in tax-exempt securities unfairly and unnecessarily restricts the demand for such

Therefore, be it resolved that the MFOA supports such amendments to the Internal Revenue Code as may be required to permit the pass through of the municipal bond interest exemption to shareholders of regulated investment companies.

FEBRUARY 22, 1977.

Senator EDWARD M. KENNEDY.

U.S. Senate, Washington, D.C.

DEAR SENATOR KENNEDY: Mr. Fred H. Fuller, President of the Janesville City Council, has forwarded me your letter of 21 January, relative to Senate Bill 261 proposing a State and local "taxable bond option" with a Federal subsidy of the interest. In reviewing the information you sent to President Fuller, I can really see no benefit to local units of government, such as Janesville. Ours is a financially sound community. We were recently able to borrow money on short term promissory notes at 4% interest under the tax exempt interest law. It would appear that the Federal subsidy to the local and State units of govern-ment under the "taxable bond option" would only be enough to pay the difference in the debt service between a tax exempt bond and a taxable bond. Even though I cannot see any benefit to the City of Janesville from S. 261 I also do not see any detrimental effect. Sincerely yours,

PHILIP L. DEATON, City Manager.

COAL INDUSTRY FACES SEVERE PROBLEMS AS IT EXPANDS PRO-DUCTION TO SUPPLY ENERGY SOURCE FOR AMERICA

Mr. RANDOLPH. Mr. President, in his address to the Nation last night, President Carter sought to convince Americans that the energy crisis is real. I hope he is successful. He issued a warning of possible "national catastrophe" unless specific measures are taken for conservation of energy and firm policies adopted to create alternatives to the Nation's growing dependency on oil and natural gas. The President will further outline his energy proposals when he addresses the Congress Wednesday night.

One of the keystones of President Carter's seven goals toward a sound en-ergy program is to boost coal produc-

tion by two-thirds by 1985.

The President and his chief energy advisor, Dr. James Schlesinger, recognize that increasing the use of coal is a vital function of the Nation's attempt to attain greater self-sufficiency in energy matters in the years ahead.

They also know that any degree of energy self-sufficiency will require un-precedented growth of coal technology and coal production. The problem of increasing coal cutput reaches far beyond the problem of physical production; it encompasses environmental and social problems, shortages of trained technicians and manpower; lack of capital investment, construction materials, and machinery.

These attendant matters aside, the sheer challenge of utilizing in a safe and satisfactory manner our most abundant energy source to prevent a national catastrophe presents mind-boggling obstacles. Starting today, with full indus-try and governmental cooperation and support, it is doubtful that any significant growth of coal production can be achieved within Mr. Carter's 7-year time frame.

My claim rests on historic fact. An article appearing on April 11 in the Pittsburgh, Pa., Post-Gazette, by Business Editor Jack Markowitz, succinctly explains the tremendous problems which must be overcome. He used the annual report of Continental Oil Co., to symbolize for the entire coal industry a history of nongrowth.

Continental Oil, with its subsidiary Consolidation Coal Co., with substantial production in West Virginia, is one of the Nation's leading energy producers. The company is one of the most progressive and expansion-minded in the industry, but a number of adverse factors have served to actually decrease overall production from previous years. I ask unanimous consent that the article "Coal Profitable, Output Limps," be placed in the RECORD so that my colleagues and people generally may be aware that the goal of boosting coal production within the next several years may be one of the most challenging and difficult America has ever undertaken.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

> COAL PROFITABLE, OUTPUT LIMPS (By Jack Markowitz)

The annual report of Continental Oil Co. discloses that the Pittsburgh-based subsidiary, Consolidation Coal Co., enjoyed by far its most profitable year in 1976, even though its 50 million tons of production came in under that of several years in the past decade.

Consol earned \$174.5 million, not quite per cent of Conoco's total profit of \$460 million. The coal unit improved on its 1975 net by more than 22 per cent and \$32 million, the fruit of higher prices, since production increased by less than 3 per cent.

Consol's profit of 1976 was 300 per cent ahead of '74's, however, and in 1973 the coal operation-considered the second largest in the U.S.-lost money. In the six years before that it never earned more than \$21 million or so. Continental Oil acquired Consol in

With President Carter's April 20 energy message to urge increased stress on coal, the impetus for additional growth at firms like Consol would appear self-evident.

Yet so far this year-badly bitten by winter, to be sure—the nation's coal output is down 12 million tons, or more than 7 per cent from a year ago. And there are informed skeptics who wonder just how profitable the

big push from the mines will be in the Age of Carter. Environmental and transportation bottlenecks-and a chaotic labor situationcould make it a struggle every inch of the way to put King Coal back on the energy throne.

The value that Continental Oil sees in Consol can be judged by two remarks in the oil company's report: 1) that 20 per cent of its \$1.1 billion capital spending program is ticketed for coal operations, some \$220 million; and 2) that it feels a "major concern" is the attitude expressed by some members of Congress that oil companies ought to "horizontally divest" coal properties. According to Conoco, such corporate surgery would only "seriously damage the nation's energy position . . . while falling to provide any beneficial results." This year's "principal uncertainty," though is a potential United Mine Workers' strike before its contract expires Dec. 6.

Consol estimates that it lost 3.2 million tons of unmined coal-6 per cent of its total 1976 production—to strikes and unauthorized work stoppages by UMW miners, and guessed the industrywide loss at 20 million

The firm claimed that even though its average mine-mouth price went up last year to \$20.64 a ton from \$20.09 in 1975, the average pre-tax profit margin on a ton of coal dropped 50 cents, from \$4.71 to \$4.21. Environmental programs cost it \$36 million, and reclamation costs of strip-mined land ranged from 40 cents to as high as \$6.25 ton of coal.

Consol expanded four mines last year, has six more in development at yearend to add nearly 5 million tons of capacity by early

But how quickly the industry has to march to an unprecedented tempo of expansion if it's to "bridge the energy gap" opened by declining oil and gas reserves was noted recently by economist Frank M. Sands of David L. Babson & Co. investment counsel. He said annual coal output rose just 22 per cent in the 1965-75 decade-but has to climb 86 per cent in '75-85 to reach a target 1.1 billion annual tons by mid next decade.

In seven of the past 25 years, says Sands, no net coal capacity was added at all; the average increase of the other 18 years was less than 8 million tons. Between now and 1985 the average yearly addition—to meet projections—has to be over 53 million tons.

Coal miner output has declined from 15 tons per day on average to 11 since the 1969 Mining Health and Safety Act was passed in 1969; wage costs per ton have more than doubled in the same period. Land reclaiming costs have soared—for one leading firm, according to Sands—from \$270 an acre in 1970 to over \$5,000 now; and President Carter is expected to pass a tougher strip mining law. Meanwhie, Sands says, half the coal feeding utility power plants does not comply with air pollution regulations-they're burning it under Environmental Protection Agency variances unlikely to be continued indefinitely.

Nor is the state of railroad track in the country now conducive to carrying the projected 300-million-ton increase in annual volume, says Sands. "It has been estimated that coal shipments from the west in 1985 would require a constant succession of milelong trains, one every 20 minutes, in both directions."

TAKING A HARD LOOK AT THE AD-MINISTRATION'S AUTO EMISSION PROPOSAL

Mr. RIEGLE. Mr. President, yesterday the administration presented its decision on auto emission control standards for model year 1978 and beyond. I am disturbed by the figures the administration is supporting, because I do not believe that they will provide what this country needs in terms of energy conservation savings, job protection, cost savings to the consumer, protecting the public health, and improving ambient air quality. Further, I am very concerned about the narrow range of advice solicited by the EPA to develop the standards proposed yesterday.

Last night President Carter stressed the urgent need that exists for the American people to unite behind a common effort to conserve energy. I took the President's message seriously and I am in full support of his national emphasis

on energy conservation.

But at the same time, I am puzzled at the administration's call for energy conservation on the one hand and its support of the auto emission schedule it proposed vesterday. If energy conservation is to be our goal—and I agree that it must be—then the administration's emission schedule is unduly stringent. It will cause the utilization of billions of gallons of additional gasoline and fuel more than the Riegle-Griffin/Dingell-Broyhill emission schedule and in the long term will not add significantly to the Nation's public health or ambient air quality goals. The potential losses it could create in fuel economy and employment in motor vehicle and related industries are great. In addition, Mr. President, missing from the administration proposal was adequate justification or sound evidence supporting its standards-certainly nothing equivalent to the interagency analysis produced last year by the Environmental Protection Agency, the Department of Transportation, and the Federal Energy Administration.

Along with Congressmen Dingell and BROYHILL and Senator GRIFFIN, I have asked for this information and have not received it. I do not know and am unable to determine the basis upon which the administration has made its emissions recommendations, but I am extremely concerned, because it has been done without the input of all of the interested parties-Government, industry, and private interest groups. The environmental interests have been well represented, and I do not oppose that. What I do object to is the administration's apparent lack of interest in the positions supported by those that will have to develop the technology to comply with these standards.

The emission standards proposed by the administration call for achieving a 0.41 gpm HC level by 1979, a 3.4 gpm CO level by 1981, and a 1.0 gpm NOx level by 1981, unless the EPA Administrator determines by 1980 that, based on health needs, a 0.4 gpm NOx level is necessary. The administration proposal also permits a waiver of the NOx level up to 1.5 gpm for diesels if they can meet the 1.0 gpm standard for 100,000 miles. In view of the considerable progress already made in improving the ambient air quality, and the technology available and cost involved in achieving these proposed standards, these reductions do not seem to represent reasonable and practical goals.

HYDROCARBONS-HO

I am seriously concerned about the 1979 0.4 gpm HC level recommended by the administration because of the fuel economy penalty it will create. Calculations using EPA methodology show that reaching the 0.41 gpm HC level by 1980, as proposed in S. 919 and H.R. 4444, will change the health impacts by less than 1 percent and will create a fuel economy penalty between 2 and 10 percent. With our national energy situation having reached crisis proportions this winter, I believe that this is a high price to pay for minimal gains in air quality. However, I am in support of achieving the 0.41 gpm HC level by 1980, because HC emissions are harmful and are one of the main components in smog formation. If any cleanup is to be accelerated, HC should be the priority.

CARBON MONOXIDE-CO

The 3.4 CO level the administration has proposed has been shown by the interagency task force on motor vehicle goals beyond 1980-the 300-day studyto be an unnecessarily stringent goal in terms of protecting the public health. This study also shows that every State in the country will meet air quality standards for CO by 1990 with the 9.0 gpm standard and, that by 1990, a 3.4-gpm standard will reduce CO contaminants by 83 percent while a 9.0-gpm standard will reduce those contaminants by 80 percent, a statistically negligible difference. In addition, the California Air Resources Board determined last year that a CO standard of 9.0 gpm was sufficient to protect the public health in the long

There are also very convincing technical arguments that support a longterm 9.0 gpm standard. Three-way catalyst cars have some difficulty meeting the 3.4 CO standard, especially when they have small engines-smaller engines produce higher levels of CO while the cars are accelerating. It is, however, the small engines that are being introduced in order to achieve better fuel economy. Accordingly any standard tighter than 9.0 gpm would have an impact on the ability of automobile manufacturers to meet the fuel economy standard that have been mandated by the Energy Policy and Conservation Act of 1975. And, from an air quality point of view, the Nation does not intend a tighter standard.

NITROUS OXIDES-NOX

The benefit of the 1.0 NOx level in the administration schedule must be weighed against technology availability and practicability, fuel consumption and cost of compliance. NOx presents a difficult problem, because its health consequences art not well known, yet it maintains the strongest correlation with mileage goals of all the auto pollutants. A flexible NOx level is critical at this point, because of the necessity to develop and implement alternative engine technologies, such as the diesel, the CVCC, the stratified charge, and the lean burn-all of which show great promise in achieving both improved air quality and fuel economy gains. The administration proposal provides a waiver for diesel engines only, and shows no indication of taking into consideration other alternative engine technologies.

Mr. President, it is critical that the auto emission question be evaluated in a broader context that includes energy, employment, health, and environmental concerns. It is important to the entire country—in particular to our ability to recover from the 1974–75 recession—and I urge Members to be aware of the impact the auto industry has on economic growth and vitality across the country.

Consider the following:

Nationwide, 14 million individuals—1 out of every 5—are employed in motor vehicle and related industries.

38 of the 50 states now share in the economic opportunities provided by the automobile industry.

More than 60% of the nation's motor vehicle and equipment industry employees derive their income outside Michigan.

Nearly 70% of all passenger cars, trucks and buses rolling off U.S. production lines are assembled outside Michigan.

The economy of every State in the country is to some degree affected by the auto industry. Further, the auto industry functions in an economic chain reaction. When the number of auto sales decreases, the impact is felt in related industries: Recent estimates indicate that a drop of \$1 billion in auto sales results in a loss of 57,000 jobs.

These are only some of the factors that need to be taken into consideration when evaluating the auto emission question. HC and CO have geen reduced 83 percent compared to the precontrolled cars of the late 1960's; NOx has been reduced 38 percent. Air quality has improved and will continue to improve as older, high polluting cars are replaced by newer automobiles.

We must, therefore, focus, on reaching the right tradeoff between further pollution controls and what they will cost the economy, the consumer, and our national energy supply. None of these economic considerations was addressed by the administration in proposing its emission standards. I believe that the administration's auto emission proposal will not achieve this critically needed tradeoff, and will instead cost the economy more in terms of energy and jobs than is necessary and than it can afford. The public health and the ambient air quality can be protected without the strict controls advocated by the administration, and the energy and economic savings will be significant.

I urge my colleagues to evaluate these arguments carefully as they reach a decision on the auto emission question.

(This concludes additional statements submitted today.)

CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, is morning business closed?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

TAX REDUCTION AND SIMPLIFI-CATION ACT OF 1977

The PRESIDING OFFICER. Under the previous order, the Senate will now resume the consideration of the unfinished business, H.R. 3477, which the clerk will state by title.

The assistant legislative clerk read as follows:

A bill (H.R. 3477) to provide for a refund of 1976 individual income taxes, and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform.

The Senate resumed the consideration of the bill which had been reported from the Committee on Finance, with amendments, as follows:

On page 2, following "Sec. 112. Special payment to recipients of aid to families with dependent children under approved State plans," insert "Sec. 113. Special Payment to recipients of certain veterans' benefits."; On page 2, Sec. 113., strike "113" and in-

sert "114":

On page 2, following "Sec. 114. Provisions applicable to special payments generally." insert "Sec. 115. Termination of 1975 special payments to certain individuals.";

On page 2, Sec. 302, strike "New jobs credit" and insert "Alternative economic stimulus credits";

On page 2, following sec. 302, insert the following:

TITLE IV-PROVISIONS RELATING EFFECTIVE DATES AND OTHER PRO-VISIONS OF THE TAX REFORM ACT OF 1976

Sec. 401. Effective date of changes in the exclusion for sick pay.

Sec. 402. Changes in treatment of income earned abroad by United States citizens living or residing abroad.

Sec. 403. Underpayments of estimated tax. Sec. 404. Underwithholding.

Sec. 405. Interest on underpayments of tax.

Sec. 406. Use of residence as day care facility.

Sec. 407. State legislators' travel expenses away from home.

TITLE V—ECONOMIC IMPACT STUDIES Sec. 501. Economic impact studies.

TITLE VI-MISCELLANEOUS PROVISIONS Sec. 601. Authorization of additional appro-

priations for the work incentive program.

Sec. 602. Rapid amortization of child care facilities. On page 9, line 22, strike "113" and insert

"114";

On page 10, line 4, strike "113" and insert "114":

On page 10, line 24, strike "and";

On page 10, line 24, following "(c)," insert "(d), and (e),";

On page 11, line 3, following "1977" insert "April 1977 in the case of a benefit described in paragraph (3)),";

On page 11, line 13, beginning with the comma, strike through and including line 18, ending with "State)":

On page 11, line 18, following the semicolon, insert "or";

On page 11, line 22, strike through and including line 24;

On page 13, beginning with line 21, insert:
(d) Phaseout for Certain Individuals WITH ADJUSTED GROSS INCOME BETWEEN \$25 .-000 AND \$30,000 .-

(1) IN GENERAL .--Notwithstanding other provision of this section, if the individual otherwise entitled to a payment under subsection (a) has adjusted gross income (as determined under section 62 of the Internal Revenue Code of 1954) for his first taxable year beginning in 1976 in excess of \$25,000, the amount of the payment under such subsection (determined without regard to this subsection and subsection (c)) shall be reduced (but not below zero) by an amount which bears the same ratio to the amount of such payment as the adjusted gross income of the individfor the taxable year in excess of \$25,-000 bears to \$5,000.

(2) MARRIED INDIVIDUALS FILING SEPARATE RETURNS.—In the case of a married individual filing a separate return of tax under the Internal Revenue Code of 1954, paragraph (1) shall be applied by substituting "\$12,for "\$25,000" and by substituting "\$2,-500" for "\$5,000".

(3) SPECIAL RULE FOR CERTAIN CHILDREN.-For purposes of this subsection, in the case of an individual entitled to a payment under subsection (a) who is a child (as defined in section 216(e) of the Social Security Act), who is unmarried, and who-

(A) has not attained the age of 18, or (B) is a full-time student and has not

attained the age of 22,

paragraph (1) shall be applied (i) by inserting "the parent or parents (if any) of" before "the individual" each place it appears in such paragraph, and (ii) by strik-ing out "his" and inserting in lieu thereof 'the parent's or parents' ".

(e) EXCLUSION OF CHILDREN RECEIVING SO-SECURITY BENEFITS.—Notwithstanding any other provision of this section, an individual otherwise entitled to a payment under paragraph (1) of subsection (a) shall not receive any payment under such paragraph if-

(1) such individual is receiving child's insurance benefits under section 202(d) of

the Social Security Act, and

(2) no benefits, other than child's insurance benefits, are being paid under title II of the Social Security Act on the basis of the wages and self-employment income of the individual whose wages and selfemployment income are the basis upon which such child's insurance benefits are paid.

The preceding sentence shall not apply to an individual described in section 202(d)(1)

(B) (ii) of the Social Security Act.

On page 17, beginning with line 21, insert: SEC. 113. SPECIAL PAYMENT TO RECIPIENTS OF CERTAIN VETERANS BENEFITS

(a) PAYMENT.—Subject to subsections (b), (c), (d), (e), and (f), the Secretary of the Treasury shall at the earliest practicable date after the enactment of this Act, make a \$50 payment to each individual who, for the month of March 1977, was entitled to com-pensation, dependency and indemnity compensation, or a pension under laws administered by the Veterans Administration.

(b) INCREASED PAYMENT FOR CERTAIN SURviving Spouses.—In the case of an individual entitled to a payment under subsection (a) who is a surviving spouse (as defined in section 101(3) of title 38, United States Code) entitled, for the month of March 1977, to dependency and indemnity compensation or pension under laws administered by the Veterans Administration, the payment under subsection (a) to that individual shall be increased by an amount equal to-

(1) \$50 multiplied by

(2) each child for whom the amount of the dependency and indemnity compensa-tion or pension of the individual is increased under such laws.

(c) SPECIAL RULES .- In the application of subsection (a)

(1) payment under such subsection shall be made only to individuals who are paid the compensation, the dependency and indem-nity compensation, or the pension involved March 1977 in a check issued no later than April 30, 1977; and

no payment under such subsection shall be made to any individual who is not a resident of the United States (as defined in the last sentence of section 111(b) of this

(d) EXCLUSION OF INDIVIDUALS RECEIVING CERTAIN DISABILITY COMPENSATION.—Not-withstanding any other provision of this section, any individual otherwise entitled to a payment under subsection (a) shall not receive any payment under such subsection if such individual is receiving compensation from the Veterans Administration for one or more disabilities rated at a combined degree of 40 percent or less.

(c) Exclusion of Individuals Receiving Certain Income-Tested Benefits.—Notwithstanding any other provision of this section any individual otherwise entitled to a payment under subsection (a) shall not receive any payment under such subsection if such individual is receiving death compensation, dependency and indemnity compensation, or a pension from the Veterans Administration, the entitlement to or amount of which is based on the annual income of that individual, and-

(1) such annual income (as determined by the Veterans Administration in the administration of the program under which the individual is receiving such compensation or pension) is in excess of-

(A) \$1,200 in the case of an individual with no spouse and no child (as defined in section 101(4) of title 38, United States Code)

(B) \$1,800 in the case of an individual with a spouse or a child (as so defined); or

(2) such individual receives any payment under paragraph (1), (2), or (3) of section 111(a) of this Act.

For purposes of paragraph (1), an individual other than a parent of a veteran receiving dependency or indemnity compensation under section 415 of title 38, United States Code, shall be considered to have a spouse even if he and his spouse are not living together if the individual is reasonably con-tributing to the support of such spouse; and a parent of a veteran receiving dependency and indemnity compensation under such section shall be considered to have a spouse only if he and his spouse are living together.

(f) Exclusion of Certain Children Re-CEIVING VETERANS BENEFITS.—Notwithstanding any other provision of this section, an individual otherwise entitled to a payment under subsection (a) shall not receive any payment under such subsection if-

(1) such individual is a child (as defined in section 101(4) of title 38, United States Code) entitled to dependency or indemnity compensation or pension under laws administered by the Veterans Administration, and

(2) the parent (as defined in section 101 (5) of such title) of such child is a surviving spouse (as defined in section 101(3) of such title) who is deceased or is not entitled to dependency or indemnity compensation or pension under such laws.

SEC. 302. ALTERNATIVE ECONOMIC STIMULUS CREDITS.

(a) NEW JOBS CREDIT .- Subpart A of part IV of subchapter A of chapter 1 (relating to credits allowable) is amended by inserting after section 44A the following new section: "SEC. 44B. CREDIT FOR EMPLOYMENT OF CER-TAIN NEW EMPLOYEES

"(a) GENERAL RULE.—At the election of the taxpayer, there shall be allowed as a credit against the tax imposed by this chapter the amount determined under subpart D of this

"(b) ELECTION.—The election referred to in subsection (a) shall be made by the employer (in the manner provided in regulations prescribed by the Secretary) on or before the due date (including any extensions of time) for filing its return of tax under this chapter for the last taxable year beginning during 1977. Once made, the election shall be effective for the year made and all sub-sequent taxable years beginning in 1977 or 1978. The Secretary shall prescribe regula-tions with respect to the continuation of the election in situations in which corporations and other persons are organized, reorganized, liquidated, or otherwise restructured. An election may not be made under this section by a corporation which is a member of a controlled group of corporations (within the meaning of section 52(a)) unless the election is made by all members of that controlled group. The election may not be made by a trade or business under common control (within the meaning of section 52(b)) unless all of the trades or businesses under common control have made the election.

"(c) REGULATIONS.—The Secretary shall prescribe such regulations as may be necessary to carry out the purposes of this sec-

tion and subpart D."

(b) Rules for Computing Credit.—Part IV of subchapter A of chapter 1 (relating to credits against tax) is amended by adding at the end thereof the following new subpart: "Subpart D-Rules for Computing Credit for Employment of Certain New

Employees

"Sec. 51. Amount of credit. "Sec. 52. Special rules.

"Sec. 53. Limitation based on amount of tax. "SEC. 51. AMOUNT OF CREDIT.

"(a) DETERMINATION OF AMOUNT.—The amount of the credit allowable by section 44B shall be-

"(1) for a taxable year beginning in 1977, an amount equal to 25 percent of the excess of the aggregate unemployment insurance wages paid during 1977 over 103 percent of the aggregate unemployment insurance wages paid during 1976, and

"(2) for a taxable year beginning in 1978, an amount equal to 25 percent of the excess of the aggregate unemployment insurance wages paid during 1978 over 103 percent of the aggregate unemployment insurance wages paid during 1977.

"(b) Total Wages Must Increase.-The amount of the credit allowable by section 44B for any taxable year shall not exceed the amount which would be determined for such year under subsection (a) if-

"(1) the aggregate amounts taken into account as unemployment insurance wages were determined without any dollar limitation, and

"(2) '105 percent' were substituted for '103

percent' in the appropriate paragraph of subsection (a).

"(c) MINIMUM PRECEDING YEAR WAGES .-For purposes of subsection (a), if 103 percent of the amount of the aggregate unemployment insurance wages paid during 1976 or

1977 is less than 50 percent of the amount of such wages paid during 1977 or 1978, respectively, 103 percent of the amount of such wages paid during the preceding year shall be increased to an amount equal to 50 percent of the amount of such wages paid during the year for which the determination is

"(d) UNEMPLOYMENT INSURANCE WAGES DE-FINED.-For purposes of this subpart-

"(1) FUTA WAGES .- Except as otherwise provided in this subpart, the term 'unem-ployment insurance wages' has the meaning given to the term 'wages' by section 3306(b), except that, in the case of amounts paid during 1978, '\$4,200' shall be substituted for \$6,000' each place it appears in section 3306

(b).

"(2) AGRICULTURAL LABOR.—If the services performed by any employee for an employer during more than one-half of any pay (within the meaning of section 3306(d)) taken into account with respect to any calendar year constitute agricultural labor within the meaning of section 3306(k)), the term 'unemployment insurance wages' means, with respect to the remuneration paid by the employer to such employee for such year, an amount equal to so much of such remunera-tion as constitutes 'wages' within the meaning of section 3121(a), except that the contribution and benefit base for each calendar year shall be deemed to be \$4,200.

"(3) RAILWAY LABOR.-If more than onehalf of the remuneration paid by an employer to an employee during the calendar year is remuneration for service described in section 3306(c)(9), the term 'unemployment insurance wages' means, with respect to such employee for such year, an amount equal to % of such much of the remuneration paid to such employee during such year as is subject to contributions under section 8(a) of the Railroad Unemployment Insurance Act

(45 U.S.C. 358(a)).

"(e) Rules for Application of Section.

For purposes of this subpart-

"(1) REMUNERATION MUST BE FOR TRADE OR BUSINESS EMPLOYMENT WITHIN STATES.—Remuneration paid by an employer to an employee during any calendar year shall be taken into account only if more than one-half of the remuneration so paid services performed in the United for States in a trade or business of the em-

"(2) SPECIAL RULE FOR CERTAIN DETERMINA-TIONS.-Any determination as to whether paragraph (1) of this subsection, or paragraph (2) or (3) of subsection (d), applies with respect to any employee for any endar year shall be made without regard to subsections (a) and (b) of section 52.

"SEC. 52. SPECIAL RULES.

"(a) CONTROLLED GROUP OF CORPORA-TIONS.—For purposes of this subpart, all employees of all corporations which are members of the same controlled group corporations shall be treated as employed by a single employer. In any such case, credit (if any) allowable by section 44B to each such member shall be its proportionate contribution to the increase in unemployment insurance wages giving rise to such credit. For purposes of this subsection, the term 'controlled group of corporations' has the meaning given to such term by section 1563(a), except that—
"(1) 'more than 50 percent' shall be sub-

stituted for 'at least 80 percent' each place

it appears in section 1563(a)(1), and "(2) the determination shall be made without regard to subsections (a) (4) and (e)(3)(C) of section 1563.

"(b) EMPLOYEES OF PARTNERSHIPS, PRO-PRIETORSHIPS, ETC., WHICH ARE UNDER COM-MON CONTROL.-For purposes of this subpart, under regulations prescribed by the Secre-

(1) all employees of trades or businesses (whether or not incorporated) which are under common control shall be treated as employed by a single employer, and

(2) the credit (if any) allowable by section 44B with respect to each trade or business shall be its proportionate contribution to the increase in unemployment insurance wages giving rise to such credit.

The regulations prescribed under this subsection shall based on principles similar to the principles whch apply in the case of subsection (a).

"(c) ADJUSTMENTS FOR CERTAIN ACQUISI-ETC.—Under regulations prescribed

by the Secretary-

(1) Acquisitions.—If, after December 31. 1975, an employer acquires the major portion of a trade or business of another person (hereinafter in this paragraph referred to as the 'predecessor') or the major portion of a separate unit of a trade or business of a predecessor, then, for purposes of applying this subpart for any calendar year ending after such acquisition, the amount of un-employment insurance wages deemed paid by the employer during periods before such acquisition shall be increased by so much of such wages paid by the predecessor with respect to the acquired trade or business as is attributable to the portion of such trade or business acquired by the employer. "(2) DISPOSITIONS.—If, after December 31,

1975-

"(A) an employer disposes of the major portion of any trade or business of the employer or the major portion of a separate unit of a trade or business of the employer in a transaction to which paragraph (1) applies, and

"(B) the employer furnishes the acquiring person such information as is necessary for the application of paragraph (1),

then, for purposes of applying this subpart for any calendar year ending after such dis-position, the amount of unemployment insurance wages deemed paid by the employer during periods before such disposition shall be decreased by so much of such wages as is attributable to such trade or business or separate unit.

TAX-EXEMPT (d) ORGANIZATIONS -NO credit shall be allowed under section 44B to any organization (other than a cooperative described in section 521) which is exempt from income tax under this chapter.

"(e) CHANGE IN STATUS FROM SELF-EM-

PLOYED TO EMPLOYEE.-If-

"(1) during 1976 or 1977 an individual has net earnings from self-employment (as defined in section 1402(a)) which are attributable to a trade or business, and

"(2) for any portion of the succeeding calendar year such individual is an employee of such trade or business,

then, for purposes of determining the credit allowable for a taxable year beginning in such succeeding calendar year, the employer's aggregate unemployment insurance

wages for 1976 or 1977, as the case may be, shall be increased by an amount equal to so much of the net earnings referred to in paragraph (1) as does not exceed \$4,200.

"(f) Subchapter S Corporations.—In the case of an electing small business corporation

(as defined in section 1371)

"(1) the amount of the credit determined under this subpart for any taxable year shall be apportioned pro rata among the persons who are shareholders of such corporation on the last day of such taxable year, and

"(2) any person to whom an amount is ap portioned under paragraph (1) shall be allowed, subject to section 53, a credit under

section 44B for such amount.

"(g) ESTATES AND TRUSTS .- In the case of an estate or trust-

(1) the amount of the credit determined under this subpart for any taxable year shall be apportioned between the estate or trust and the beneficiaries on the basis of the income of the estate or trust allocable to each,

'(2) any beneficiary to whom any amount has been apportioned under paragraph (1) shall be allowed, subject to section 53, a credit under section 44B for such amount.

"(h) LIMITATIONS WITH RESPECT TO CERTAIN Persons.—Under regulations prescribed by

the Secretary, in the case of-

(1) an organization to which section 593 (relating to reserves for losses on loans) ap-

"(2) a regulated investment company or a real estate investment trust subject to taxation under subchapter M (section 851 and following), and

"(3) a cooperative organization described

in section 1381(a),

rules similar to the rules provided in section 46(e) shall apply in determining the amount

of the credit under this subpart.

"(i) CERTAIN SORT TAXABLE YEARS.-If the employer has more than one taxable year beginning in 1977 or 1978, the credit under this subpart shall be determined for the employer's last taxable year beginning in 1977 or 1978, as the case may be.

'SEC. 53 LIMITATION BASED ON AMONT OF TAX.

"(a) GENERAL RULE.—Notwithstanding section 51, the amount of the credit allowed by section 44B for the taxable year shall not exceed the amount of the tax imposed by this chapter for the taxable year, reduced by the sum of the credits allowable under

section 33 (relating to foreign tax

credit),

"(2) section 37 (relating to credit for the elderly),

"(3) section 38 (relating to investment in certain depreciable property),

"(4) section 40 (relating to expenses of

work incentive programs), "(5) section 41 (relating to contribu-tions to cadidates for public office),

"(6) section 42 (relating to general tax

credit), and

'(7) section 44A (relating to expenses for household and dependent care services necessary for gainful employment).

For purposes of this subsection, any tax imposed for the taxable year by section 56 (relating to minimum tax for tax preferences), section 72(m)(5)(B) (relating to 10 percent tax on premature distributions to owner-employees), section 408(f) (relating to additional tax on income from certain retirement accounts), section 402(e) (relating to tax on lump-sum distributions), section 531 (relating to accumulated earnings tax), section 541 (relating to personal holding comtax), or section 1378 (relating to tax on certain capital gains of subchapter S corporations), and any additional tax imposed for the taxable year by section 1351(d)(1) (relating to recoveries of foreign expropriation losses), shall not be considered tax imposed by this chapter for such year.

'(b) SPECIAL RULE FOR PASS-THROUGH OF CREDIT.—In the case of a partner in a partnership, a beneficiary of an estate or trust, and a shareholder in a subchapter S Corporation, the limitation provided by subsection (a) for the taxable year shall not exceed a limitation separately computed with respect to such person's interest in such entity by taking an amount which bears the same relationship to such limitation as-

"(1) that portion of the person's taxable income which is allocable or apportionable to the person's interest in such entity, bears

"(2) the person's taxable income for such year year reduced by his zero bracket amount (determined under section 63(d)), if any.

"(c) CARRYOVER AND CARRYOVER OF UN-USED CREDIT.

"(1) ALLOWANCE OF CREDIT.-If amount of the credit determines undersection 51 for any taxable year exceeds the limitation provided by subsection (a) for such taxable year (hereinafter in this subsection referred to as the 'unused credit year'), such excess shall be-

"(A) a new employee credit carryback to each of the 3 taxable years preceding the un-

used credit year, and

"(B) a new employee credit carryover to each of the 7 taxable years following the unused credit year.

and shall be added to the amount allowable as a credit by section 44B for such years. If any portion of such excess is a carryback to a taxable year beginning before January 1, 1977, section 44B shall be deemed to have been in effect for such taxable year for purposes of allowing such carryback as a credit under such section. The entire amount of the unused credit for an unused credit year shall be carried to the earliest of the 10 taxable years to which (by reason of subparagraphs (A) and (B)) such credit may be carried, and then to each of the other 9 taxable years to the extent that, because of the limitation contained in paragraph (2). such unused credit may not be added for a prior taxable year to which such unused credit may be carried.

"(2) LIMITATION.—The amount of the unused credit which may be added under paragraph (1) for any preceding or succeeding taxable year shall not exceed the amount by which the limitation provided by subsection (a) for such taxable year exceeds the sum

"(A) the credit allowable under section

44B for such taxable year, and

"(B) the amounts which, by reason of this subsection, are added to the amount allowable for such taxable year and which are attributable to taxable years preceding the unused credit year."

(c) DEDUCTION FOR WAGES PAID REDUCED BY

AMOUNT OF CREDIT .-

(1) IN GENERAL.—Part IX of subchapter B of chapter 1 (relating to items not deductible) is amended by adding at the end thereof the following new section:

"Sec 280C. PORTION OF WAGES FOR WHICH CREDIT IS CLAIMED UNDER SEC-TION 44B.

"No deduction shall be allowed for that portion of the wages or salaries paid or incurred for the taxable year which is equal to the amount of the credit allowable for the taxable year under section 44B (relating to credit for employment of certain new employees) determined without regard to the provisions of section 53 (relating to limitation based on amount of tax). In the case of a corporation which is a member of a controlled group of corporations (within the meaning of section 52(a)) or a trade or business which is treated as being under common control with other trades or businesses (within the meaning of section 52 (b)), this section shall be applied under rules prescribed by the Secretary similar to the rules applicable under subsections (a) and (b) of section 52.".

(2) CLERICAL AMENDMENT.—The table of sections for such part is amended by adding at the end thereof the following new

"Sec. 280C. Portion of wages for which credit is claimed under section 44B.".

ALTERNATIVE INCREASE IN INVESTMENT CREDIT.—Paragraph (2) of section 46(a) (relating to amount of credit for current taxable year) is amended by adding at the end thereof the following new subpara-

(E) INCREASE IN PERCENTAGES FOR TAXPAY-ERS NOT CLAIMING SECTION 44B CREDIT .-

"(i) In the case of a taxpayer for whom an election to take the credit allowed by section 44B (relating to credit for employment of certain new employees) is not in effect, subparagraph (A) shall be applied by substituting '12 percent' for '10 percent', and clause (i) of subparagraph (B) shall be applied by substituting '13 percent' for '11 percent'.
"(ii) The provisions of clause (i) shall

apply only to-

(I) property to which subsection (d) does not apply, the construction, reconstruction, or erection of which is completed by the taxpayer after December 31, 1976, but to the extent of the basis thereof attributable to construction, reconstrucion, or erection after such date and before Janu-

ary 1, 1981,
"(II) property to which subsection (d) does not apply, acquired by the taxpayer after December 31, 1976, and before January 1, 1981, and place in service by the taxpayer before January 1, 1981, and

"(III) property to which subsection (d) applies, but only to the extent of the qualified investment (as, determined under subsections (c) and (d)) with respect to quali-fled progress expenditures made after December 31, 1976, and before January 1, 1981.

"(iii) In the case of a taxpayer with respect to whom an election under section 44B(b) is in effect for 1978, clause (ii) of this subparagraph shall be applied by substituting 'December 31, 1978,' for 'December 31, 1976,' each place it appears therein.".

TECHNICAL AND CONFORMING AMEND-

MENTS.

(1) CLERICAL AMENDMENTS .-

(A) The table of sections for subpart A of part IV of subchapter A of chapter 1 amended by inserting after the item relating to section 44A the following new item:

"Sec. 44B. Credit for employment of certain new employees.

(B) The table of subparts for part IV of subchapter A of chapter 1 is amended by adding at the end thereof the following new

"Subpart D. Rules for computing credit for employment of certain new employees."

(2) MINIMUM TAX.-

(A) Section 56(c) (defining regular tax deduction) is amended by striking out "and" at the end of paragraph (7), by striking out the period at the end of paragraph (8) and inserting in lieu thereof ", and", and by adding at the end thereof the following new paragraph:

"(9) section 44B (relating to credit for employment of certain new employees).

(B) Subparagraph (A) of section 56(e) (1) (relating to tax carryover for timber) amended-

(i) by striking out "and" at the end of clause (ii),
(ii) by striking out "exceed" at the end

of clause (iii) and inserting in lieu thereof "and", and

(iii) by inserting after clause (iii) the

following new clause:
"(iv) section 44B (relating to credit for employment of certain new employees) ex-

(3) CORPORATE REORGANIZATIONS.

(A) Subsection (c) of section 381 (relating to items of the distributor or transferor corporation) is amended by adding at the end thereof the following new paragraph:

"(26) CREDIT UNDER SECTION 44B FOR EM-PLOYMENT OF CERTAIN NEW EMPLOYEES .- The acquiring corporation shall take into account (to the extent proper to carry out the purposes of this section and section 44B, under such regulations as may be prescribed by the Secretary) the items required to be taken into account for purposes of section 44B in respect of the distributor or transferor corporation."

(B) Section 383 (relating to special limitations on unused investment credits, work incentive program credits, foreign taxes, and capital losses), as in effect for taxable years beginning after June 30, 1978, is amended—

(i) by inserting "to any unused new employee credit of the corporation under section 53(c)," after "section 50A(b),"; and

(ii) by striking out "WORK INCENTIVE PROGRAM CREDITS," in the section heading and inserting in lieu thereof "WORK INCENTIVE PROGRAM CREDITS, NEW EMPLOYEE CREDITS,"

(C) Section 383 (as in effect on the day before the date of the enactment of the Tax Reform Act of 1976) is amended-

(i) by inserting "to any unused new employee credit of the corporation which could otherwise be carried forward under section 53(c),

(c)," after "section 50A(b),"; and (ii) by striking out "WORK INCENTIVE PROGRAM CREDITS," in the section heading and inserting in lieu thereof "WORK PROGRAM CREDITS, NEW INCENTIVE EMPLOYEE CREDITS,".

(D) The table of sections for part V of subchapter C of chapter 1 is amended by striking out "work incentive program credits," in the item relating to section 383 and inserting in lieu thereof "work incentive program credits, new employee credits,".

(4) STATUTES OF LIMITATION AND INTEREST RELATING TO NEW EMPLOYEE CREDIT CARRY-

(A) ASSESSMENT AND COLLECTION. -Section 6501 (relating to limitations on assessment and collection) is amended by adding at the end thereof the following new subsection:

(D) NEW EMPLOYEE CREDIT CARRYBACKS .-In the case of a deficiency attributable to the application to the taxpayer of a new employee credit carryback (including defi-ciencies which may be assessed pursuant to the provisions of section 6213(b)(3)), such deficiency may be assessed at any time before the expiration of the period within which a deficiency for the taxable year of the unused new employee credit which results in such carryback may be assessed, or, with respect to any portion of a new employee credit carryback from a taxable year attributable to a net operating loss carryback, an investment credit carryback, a work incentive program credit carryback, or capital loss carryback from a subsequent taxable year, at any time before the expiration of the period within which a deficiency for such subsequent taxable year may be assessed."

CREDIT OR REFUND .- Section 6511(d) (relating to limitations on credit or refund is amended by adding at the end thereof the following new paragraph:

"(9) SPECIAL PERIOD OF LIMITATION WITH RESPECT TO NEW EMPLOYER CREDIT CARRY-BACKS .-

"(A) PERIOD OF LIMITATIONS.-If the claim for credit or refund relates to an overpayment attributable to a new employee credit carryback, in lieu of the 3-year period of prescribed in subsection (a), the period shall be that period which ends with the expiration of the 15th day of the 40th month (or 39th month, in the case of a corporation) following the end of the taxable year of the unused new employee credit which results in such carryback (or, with respect to any portion of a new employee credit carryback from a taxable year attributable to a new operating loss carryback, an investment credit carryback, a work incentive program credit carryback, or a capital loss carryback from a subsequent taxable year, the period shall be that period which ends with the expiration of the 15th day of the 40th month, or 39th month, in the case of a corporation, following the end of such taxable year) or the period prescribed in subsection (c) in respect of such taxable year, whichever expires later. In the case

of such a claim, the amount of the credit or refund may exceed the portion of the tax paid within the period provided in subsection (b)(2) or (c), whichever is applicable to the extent of the amount of the overpayment attributable to such carryback.

(B) APPLICABLE RULES.—If the allowance of a credit or refund of an overpayment of tax attributable to a new employee credit carryback is otherwise prevented by the operation of any law or rule of law other than section 7122, relating to compromises, such credit or refund may be allowed or made, if claim therefor is filed within the period provided in subparagrhp (A) of this paragraph. In the case of any such claim for credit or refund, the determination by any court, including the Tax Court, in any proceeding in which the decision of the court has become final shall not be conclusive with respect to the new employee credit, and the effect of such credit, to the extent that such credit is affected by a carryback which was not in issue in such proceeding."

(C) INTEREST OF UNDERPAYMENTS.—Section 6601(d) (relating to income tax reduced by carryback or adjustment for certain unused deductions) is amended by adding at the end thereof the following new paragraph:

"(5) NEW EMPLOYEE CREDIT CARRYBACK .- If the credit allowed by section 44B for any taxable year is increased by reason of a new employee credit carryback, such increase shall not affect the computation of interest under this section for the period ending with the last day of the taxable year in which the new employee credit carryback arises, or, with respect to any portion of a new employee credit carryback from a taxable year attributable to a new operating loss carryback, an investment credit carryback, a work incentive program credit carryback, or a capital loss carryback from a subsequent taxable year, such increase shall not affect the computation of interest under this section for the period ending with the last day of such subsequent taxable year."

(D) INTEREST ON OVERPAYMENTS.—Section 6611(f) (relating to refund of income tax caused by carryback or adjustment for certain unused deductions) is amended by adding at the end thereof the following new

paragraph:

"(5) NEW EMPLOYEE CREDIT CARRYBACK .-For purposes of subsection (a), if any overpayment of tax imposed by subtitle A results from a new employee credit carryback, such overpayment shall be deemed not to been made before the close of the taxable year in which such new employee credit carryback arises, or, with respect to any portion of a new employee credit carryback from a taxable year attributable to a net operating loss carryback, an investment credit carryback, a work incentive program credit carry back, or a capital loss carryback from a subsequent taxable year, such overpayment shall deemed not to have been made before the close of such subsequent taxable year.'

(5) TENTATIVE CARRYBACK ADJUSTMENTS .-(A) APPLICATION FOR ADJUSTMENT.—Section 6411 (relating to quick refunds in respect tentative carryback adjustments) amended-

(i) by striking out "or unused work in-centive program credit" each place it appears in such section and inserting in lieu thereof "unused work incentive program credit, or unused new employee credit"

(ii) by inserting after "section 50A(b)," in the first sentence of subsection (a) new employee credit carryback provided in section 53(c).".

(iii) by striking out "or a work incentive program carryback from" in the second sentence of subsection (a) and inserting in lieu thereof ', a work incentive program carryback, or a new employee credit carryback from", and

(iv) by striking out "investment credit carryback)" in the second sentence of sub-

section (a) and inserting in lieu thereof "investment credit carryback, or, in the case of a new employee credit carryback, to an investment credit carryback or a work incentive program carryback)".

(B) TENTATIVE CARRYBACK ADJUSTMENT AS-SESSMENT PERIOD .- Section 6501(m) (relating to tentative carryback adjustment as-

sessment period) is amended-

(i) by striking out "or a work incentive program carryback" and inserting in lieu thereof "a work incentive program carryback, or a new employee credit carryback",

(ii) by striking out "(j), or (o)" each place it appears and inserting in lieu thereof

(j), (o), or (p)"

(6) DESIGNATION OF INCOME TAX PAY-MENT.—Section 6096(b) (relating to designation of income tax payments to Presidential Election Campaign Fund) is amended by striking out "and 44A" and inserting in lieu thereof "44A, and 44B".

Effective Date.—The amendments made by this section shall apply to taxable years beginning after December 31, 1976, and to credit carrybacks from such years.

On page 114, beginning with line 6, insert the following new title:

TITLE IV-PROVISIONS RELATING TO EFFECTIVE DATES AND OTHER PRO-VISIONS OF THE TAX REFORM ACT

SEC. 401. EFFECTIVE DATE OF CHANGES IN THE EXCLUSION FOR SICK PAY

(a) IN GENERAL.—Section 505 of the Tax Reform Act of 1976 (relating to changes in exclusions for sick pay and certain military, etc., disability pensions; certain disability income) is amended by adding at the end thereof the following new subsection:

"(f) EFFECTIVE DATE FOR SUBSECTION (a) The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1976.".

(b) CONFORMING AMENDMENTS.

(1) Paragraph (1) of section 505(c) such Act is amended by striking out "1976" and inserting in lieu thereof "1977".

(2) Paragraph (3) of such section 505(c) is

amended by inserting "or January 1, 1977," after "January 1, 1976,".

(3) Paragraph (1) of section 505(d) of such Act is amenled by striking out "1976" and inserting in lieu thereof "1977".

(4) Paragraph (2) of such section 505(d) is amended by inserting "or December 31, 1976," after "December 31, 1975,".

(5) Subsection (d) of section 505 of such

Act is amended by striking out "this subsection" and inserting in lieu thereof "such section 105(d)".

(b) REVOCATION OF ELECTION.—Any election made under section 105(d) (7) of the Internal Revenue Code of 1954 or under section 505 (d) of the Tax Reform Act of 1976 for a taxable year beginning in 1976 may be revoked (in such manner as may be prescribed by regulations) at any time before the expiration of the period for assessing a deficiency with

respect to such taxable year.

(c) PERIOD FOR ASSESSING DEFICIENCY.—In the case of any revocation made under subsection (d), the period for assessing a defi-ciency with respect to any taxable year af-fected by the revocation shall not expire before the date which is 1 year after the date of the making of the revocation, and, notwithstanding any law or rule of law, such deficiency, to the extent attributable to such revocation, may be assessed at any time dur-

ing such 1-year period.

(d) Effective Date.—The amendments made by subsections (a), (b), and (c) shall take effect on October 4, 1976, but shall not

(1) with respect to any taxpayer who makes or has made an election under section 105(d) (7) of the Internal Revenue Code of 1954 or under section 505(d) of the Tax Reform Act of 1976 (as such sections were in effect before the enactment of this Act) for a taxable year beginning in 1976, if such election is not revoked under subsection (d) of this section, and

(2) with respect to any taxpayer (other than a taxpayer described in paragraph (1)) who has an annuity starting date at the be ginning of a taxable year beginning in 1976 by reason of the amendments made by section 505 of the Tax Reform Act of 1976 (as in effect before the enactment of this Act), unless such person elects (in such manner as the Secretary of the Treasury or his delegate may by regulations prescribe) to have such amendments apply.

SEC. 402. CHANGES IN TREATMENT OF INCOME EARNED ABROAD BY UNITED STATES CITIZENS LIVING OR RESIDING ABROAD.

Subsection (d) of section 1011 of the Tax Reform Act of 1976 is amended by striking out "December 31, 1975" and inserting in

lieu thereof "December 31, 1976". SEC. 403. UNDERPAYMENTS OF ESTIMATED TAX.

No addition to the tax shall be made under section 6654 or 6655 of the Internal Revenue Code of 1954 (relating to failure pay estimated income tax) for any period before April 16, 1977 (March 16, 1977, in the case of a taxpayer subject to section 6655), with respect to any underpayment, to the extent that such underpayment was created or increased by any provision of the Tax Reform Act of 1976.

SEC. 404. UNDERWITHHOLDING.

No person shall be liable in respect of any failure to deduct and withhold under section 3402 of the Internal Revenue Code of 1954 (relating to income tax collected at source) on remuneration paid before January 1, 1977, to the extent that the duty to deduct and withhold was created or increased by any provision of the Tax Reform Act of 1976.

SEC. 405. INTEREST ON UNDERPAYMENTS OF TAX.

No interest shall be payable for any period before April 16, 1977 (March 16, 1977, in the case of a corporation), on any underpayment of a tax imposed by the Internal Reve nue Code of 1954, to the extent that such underpayment was created or increased by any provision of the Tax Reform Act of 1976.

SEC. 406. USE OF RESIDENCE AS DAY CARE FACILITY.

(a) In GENERAL.—Subsection (c) of section 280A (relating to certain business use) is amended by adding at the end thereof the following new paragraph:

"(5) DAY CARE USE.—In the case of a taxpayer engaged in the trade or business of providing care for children, for individuals who have attained the age of 65 years, or for individuals who are physically or mentally incapable of caring for themselves within his residence, the first sentence of paragraph (1) shall be applied, with respect to such trade or business, by deleting the word 'excluively'. If a portion of the taxpayer's residence used for the purposes described in the preceding sentence is not used exclusively for those purposes, the amount of the deduction attributable to that portion shall not exceed an amount which bears the same ratio to the total amount of the items allocable to such portion as the numbers of hours the portion is used for such purposes bears to the number of hours the portion is available for use.".

(b) Effective Date.—The amendment made by subsection (a) apply with respect to taxable years beginning after December 31, 1975.

SEC. 407. STATE LEGISLATORS' TRAVEL EXPENSES AWAY FROM HOME.

Subsections (a) and (d) of section 604 of the Tax Reform Act of 1976 are each amended by striking out "January 1, 1976," and inserting in lieu thereof "January 1, 1977,". Subsection (c) of such section is amended by inserting "beginning before January 1, 1976," after "any taxable year".

On page 119, beginning with line 16, insert

the following new title:

TITLE V-ECONOMIC IMPACT STUDIES "SEC. 501. ECONOMIC IMPACT STUDIES.

(a) In GENERAL.—The Secretary of the Treasury, the Chairman of the Council of Advisers, the Chairman of the Board of Governors of the Federal Reserve System, and the Director of the Congressional Budget Office shall each-

(1) prepare a detailed forecast of the expected rates of real economic growth, unemployment, and inflation for each of the eight calendar quarters beginning after the date of enactment of this Act and of the expected effects of the credit for investment in certain depreciable property provided by section 38 of the Internal Revenue Code of 1954 (with special attention to the increase in the rate of such credit provided by this Act), the credit for employment of certain new employees provided by section 44B of such Code, the refund of 1976 individual income taxes provided by section 6428 of such Code and the payments provided for under part II of title I of this Act on the rates of real economic growth, unemployment, and inflation for each of those quarters, and

(2) prepare a full and complete study at the end of each such quarter analyzing such rates of real economic growth, unemploy-ment, and inflation for that quarter and the actual impact of such credits, refund, and

payments on them.

(b) REPORTS .- The Secretary, the Chairman of the Council of Economic Advisers, the Chairman of the Board of Governors, and the Director shall each submit to the Committee on Finance of the Senate and to the Committee on Ways and Means of the House of Representatives-

(1) a report describing the forecast and analysis required by paragraph (1) of sub-section (a) not later than May 15, 1977, and

(2) a series of quarterly reports on the studies of the actual impact of the refund and payments required under paragraph (2) of subsection (a) within 60 days after the end of each calendar quarter for which such studies are required.

On page 121, beginning with line 6, insert the following new title:

TITLE VI-MISCELLANEOUS PROVISIONS SEC. 601. AUTHORIZATION OF ADDITIONAL AP-PROPRIATIONS FOR THE WORK IN-CENTIVE PROGRAM.

- (a) MATCHING FUNDS DISREGARDED. -The Secretary of Health, Education, and Welfare and the Secretary of Labor are authorized to carry out the work incentive program under title IV of the Social Security Act from the sums appropriated pursuant to this Act without regard to the requirements for non-Federal matching funds contained in sections 402(a) (19) (C), 402(a) (19) (G), 403(a) (3) (A), 403(d), and 435 of the Social Security
- (b) Authorization.—There are authorized to be appropriated to carry out the work incentive program under title IV of the Social Security Act, as modified by this Act (in addition to any sums otherwise appropriated pursuant to title IV of such Act) \$435,000,-000 for fiscal year 1978 and \$435,000,000 for fiscal year 1979.
- SEC. 602. RAPID AMORTIZATION OF CHILD FA-CILITIES
- (a) RAPID AMORTIZATION OF CHILD CARE

(1) Subsection (c) of section 133 (relating to application of section 188) is amended by striking out "January 1, 1977" and inserting in lieu thereof January 1, 1982"

(2) Subsection (b) of section 188 (relating to definition of section 188 property) is amended by striking out "as a facility for on-the-job training of employees (or prospective employees) of the taxpayer, or

(3) The caption of section 188 is amended by striking out "ON-THE-JOB TRAINING

AND".

(4) The table of sections for part VI of subchapter B of chapter 1 is amended by striking out the item relating to section 183 and inserting in lieu thereof the following new item:

'Sec. 188. Amortization of certain expenditures for child care facilties.".

EFFECTIVE DATE.—The amendments made by subsection (a) apply with respect to expenditures made after December 31, 1976.

WAIVER OF THE CONGRESSIONAL BUDGET ACT WITH RESPECT TO CONSIDERATION OF H.R. 3477

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed at this time to the consideration of Calendar Order No. 70, Senate Resolution 126, the resolution waiving section 303(a) of the Congressional Budget Act with respect to H.R. 3477, with the understanding that upon the disposition of the waiver-which would naturally flow without the request-the Senate resume the consideration of H.R. 3477.

PRESIDING OFFICER. The The resolution will be stated.

The assistant legislative clerk read as follows:

Resolved, That (a) pursuant to section 303 (c) of the Congressional Budget Act of 1974, section 303(a) of such Act shall not apply with respect to the consideration in the Senate of the bill (H.R. 3477) to provide for a refund of 1976 individual income taxes and other payments, to reduce individual and business taxes, and to provide tax simplification and reform;

(b) That waiver of this section is necessary in order to enable the Senate promptly to consider legislation providing urgently needed economic stimulus measures; and

further

(c) That no point of order shall lie under section 401(b) of the Budget Act with respect to consideration of title I of such bill, the budgetary impact of which has already been considered by the Congress in its de-liberations on the third concurrent resolution on the budget for fiscal year 1977.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its immediate consideration. Under the law, there is a time limitation of 1 hour, to be equally divided. Who yields time?

Mr. MUSKIE. Mr. President, I yield myself such time as I may require.

Under section 303 of the Budget Act, whenever new revenue legislation is proposed to the Senate which becomes effective in a fiscal year for which no first budget resolution is in effect, it cannot be considered unless the Senate adopts a waiver of the requirement that such legislation be reported to the Senate after the May 15 in question.

In the case of the tax bill which is on the calendar and is pending, the waiver resolution was reported to the Senate by the Finance Committee at the same time that it reported the tax bill. As required by the Budget Act, the waiver resolution

was referred to the Senate Budget Committee, and the Budget Committee reported the resolution with approval prior to the recess.

The waiver was required, not with respect to all of the tax bill, but only with respect to those parts that dealt with extension of the temporary tax reductions and the \$50 rebate provision.

Since the latter has been withdrawn, the question of the applicability of the waiver requirements of the Budget Act is really moot with respect to these payments; at least I assume that the Finance Committee will withdraw the \$50 tax rebate provision as requested by the chairman of the Finance Committee yesterday.

Mr. HARRY F. BYRD, JR. Mr. President, if the Senator will yield at that point, the Finance Committee acted this

morning to do that.

Mr. MUSKIE. That being the case, then may I say to the Senator from Virginia, the requirement of the waiver resolution at this point is moot in terms of the Budget Act with respect to the rebate payments.

That does not mean, of course, that the merits of the tax bill in the final form that it will take when it comes before the Senate should not be debated.

I discussed the waiver resolution with the members of the committee by polling them individually. It was not possible to get a meeting of the Budget Committee this morning, because of a meeting on energy at the White House, but the members of the Budget Committee overwhelmingly approved this report to the Senate, that the waiver resolution is appropriate and the committee can see no objection to its consideration by the Senate at the present time. I really see no reason to take up the Senate's time any further with respect to the consideration of it.

I do have a statement, Mr. President, that I would like to put into the RECORD, that discusses some of the issues that have been raised by the President's withdrawal of his support for the tax rebate, the economic considerations that must now be weighed by the Budget Committee, by the Senate, and by Congress as a whole.

May I say to the Senate, Mr. President, that the Budget Committee will meet this week as a first step in reevaluating the economic policies that are reflected in the third concurrent budget resolution for 1977 and the first concurrent resolution for 1978. A change of the magnitude proposed by the President cannot be made without raising questions about the underlying economic policy that is involved. The committee will be meeting for that purpose, and conceivably could be recommending modifications of those two budget resolutions after it has given both of them the kind of consideration that this action by the President merits. The statement I am submitting for the RECORD covers some of those issues at greater length.

Mr. President, the issue before the Senate is the adoption of Senate Resolution 126, reported by the Committee on the Budget on April 6. Adoption of this resolution is necessary to clear the way for Senate consideration of H.R. 3477, the Tax Reduction and Simplification Act of 1977

Under the Budget Act, Senate consideration of any revenue or spending measure which first takes effect in a fiscal year for which no budget resolution has yet been adopted must be preceded by consideration and adoption of a resolution under the authority of section 303 of the Budget Act. The purpose of this Budget Act provision is to assure that revenue changes adopted in one fiscal year do not inadvertently or imprudently mortgage the revenue collections of the Government in a future fiscal year.

The tax bill to which the pending waiver resolution applies is an integral part of the congressional fiscal policy adopted in the third concurrent resolution on the budget just 2 months ago. Many of its features take effect immediately. The extension of the temporary personal and corporate tax reductions provided for by the bill take effect next January 1, a date which falls in the forthcoming fiscal year. These fiscal 1978 provisions are those to which the pending waiver resolution applies.

The Senate Budget Committee considered this waiver resolution in connection with its markup and report on the first budget resolution for fiscal year 1978. That budget resolution will be considered in the Senate soon after completion of the work on this tax bill. That budget resolution, the tax bill, and this waiver resolution are closely intertwined. I will have additional remarks to make about the principal individual features of the tax bill when it is the pending business of the Senate. But I want to call the Senate's attention now to the reality that the pending tax bill is separably woven into the fabric of the consistent economic policy Congress has adopted in the third budget resolution and will soon consider in the congressional budget for 1978.

Congress, in adopting the Budget Act. provided a mechanism for assuring a coherent and consistent fiscal policy for the Federal Government on a year-in, year-out basis. Congress did so by healing the century-old rift between spending and tax decisions in the Congress by its creation of the Budget Committees. Congress also provided that the budget process would be aided by professional economic and analytic staff, not only in the two Budget Committees, but in the Congressional Budget Office as well. The purpose of all these measures was to free the country from the rollercoaster of haphazard and inconsistent economic policy which had afflicted the Federal Government until that time. In furtherance of that purpose, the Budget Act sought to assure effective congressional control over the budgetary process in order to free the legislative branch from exclusive dependence for economic leadership and analysis upon the executive branch.

The budget process has been proven effective in its 2 years of operation. We tempered plans to spend and directed them toward job-creating purposes. We held down the recession-created deficit

and shaped a congressional fiscal policy to accelerate our national economic recovery. Just a few months ago, we believed it was operating at its best in cooperation with the President when we reported a third budget resolution to accommodate the program of job creation the President submitted on January 31. We now confront the reality that the President has changed his mind about a large portion of that program which affects this tax bill. He has withdrawn support for the \$50 payments which were a keystone of his economic program. I have made clear my view that the President's positions was a serious economic misjudgment.

I ask unanimous consent that my statement in favor of the \$50 payment, which I made in the Senate on April 7, and my reaction to the President's withdrawal of that proposal, be made a part of the Record at the conclusion of these

remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 1 and 2.)

Mr. MUSKIE. But the President's change of mind does not change the economy or the congressional budget policy set forth in the third concurrent resolution on the budget. Whether there are viable alternatives to the rebate proposal to fill the gap which the President's failure to support his own program has created remains to be seen. The Budget Committee will meet this Friday to consider that issue and whether additional amendments to the congressional budget are in order.

This change of circumstances, however, required me to consult the members of the Budget Committee as to whether the waiver resolution reported before the recess should be reconsidered. It is my conclusion, based on those consultations, that the committee believes that debate on this tax bill should proceed at the present time, and that the waiver resolution should be adopted. I concur in that

judgment.

The Budget Committee will meet soon to evaluate whether, in light of the President's withdrawal of support for his own program, the revenue floor stipulated in the third budget resolution should be revised. We have to assure that imprudent or inadvisable revenue amendments are not enacted during the balance of this fiscal year which use up any significant portion of the \$6.5 billion included in that budget resolution for those portions of the President's program support for which he was now withdrawn. It may be that the President's action came too late in the fiscal year to permit Congress to craft and substitute an equivalent stimulative and employment-related fiscal policy. If that is so, our only option may be to revise the revenue floor upward again to hold down the deficit and to preserve the remainder of the fiscal plan we adopted in the third resolution and the fiscal plan contemplated in the first resolution for next year. I have no doubt that such a change in the revenue floor can be accomplished prior to the return of a conference report on this tax bill, if that course must be followed to assure that improvident amendments to

this tax bill, even if they are in order under the present revenue floor of the third resolution, will be out of order in a conference report.

We should not add one nickel to the deficit to pay for tax programs which may be sound but which ought to be postponed until the budget is in balance. While Congress should spend what it must to return the country to full employment and a balanced budget at the earliest possible date, it should not go into the marketplace to borrow funds to pay for tax cuts which are nice to have but do not serve the goal of a balanced budget at the earliest possible date.

As usual, it is not pleasant to remind my colleagues, as I must as chairman of the Budget Committee, of the counterproductive, unpleasant, and unacceptable fiscal implications of tax bills which are attractive in their purpose but unacceptably add to the deficit we face. But that is my duty as chairman of your committee, and I will pursue it in connection with this tax bill with all the

vigor at my command.

Let me also take this opportunity, however, to commend the distinguished chairman of the Finance Committee, Senator Long, and that committee itself for the high degree of restraint and responsibility they have demonstrated in the formulation of the present tax bill. They have adhered to the budget process and supported it. The bill they reported advanced both the President's program and the budget process. Although I have some differences on individual features of the bill they have reported, I will stand with them now to defend the bill from imprudent additions which do not conform to the policy of the congressional budget.

EXHIBIT 1

A CRITICAL NEED FOR THE PERSONAL INCOME TAX REBATE

Mr. Muskie. Mr. President, I address my remarks this morning to the rebate on personal income taxes proposed by the President and provided for in the third concurrent resolution on the budget for fiscal year 1977.

We are in the midst of recovery from the worst economic recession since the 1930's. The recovery has been underway for 2 years, but has proceeded too slowly to cut deeply into unemployment or unused industrial capacity. Unemployment remains at unacceptable levels. Seven million persons, including 2½ million family heads, are still out of work.

In my home State of Maine, for example, unemployment remains above 10 percent, a figure essentially unchanged from a year ago, despite our hopes for a speedier recovery. And it is a measure of the seriousness of the recession that analysts concluded that 1976 was a relatively good year for Maine's economy, even though 1 worker in 10 did not have a job.

The pace of the recovery slowed down in mid 1976. The Budget Committee recognized this slackening when we proposed the fiscal policy embodied in the second concurrent resolution for 1977. We stated in our report to the Senate that we were prepared to consider a subsequent concurrent resolution early in 1977 if the economic data received by then did not indicate that the recovery was proceeding satisfactorily.

President Carter shared our sentiments. As a candidate for the Presidency, he promised to provide a fiscal policy that would stimulate the economy and reduce unemployment.

Soon after taking office, he sent his stimulus proposals to Congress. The Budget Com-

mittee also recognized the need for immediate additional stimulus early this year. In response to the President's proposals and our own recognition of the slowdown in the recovery, we reported the third concurrent resolution to the Senate. Congress reduced the revenue floor for fiscal year 1977 in order to provide additional economic stimulus as quickly as possible.

The need for the stimulus is still critical. The rebate we are now considering provides about 60 percent of the stimulus provided for in the third budget resolution for fiscal year 1977. We adopted the budget resolution with utmost speed in order to facilitate rapid enactment of the stimulus proposals. A month has now passed since the resolution was adopted; we have lost too much time already. If we fall to adopt the rebate we will fall even further behind in our schedule for economic recovery.

Mr. President, the worst possible mistake that could be made in fiscal policy would be to decide, at this late date, that the economy is in fine shape, that effective stimulus is no longer required in 1977, and that the rebate can be abandoned. Policymakers in this country and other have been justly criticized for a lack of steadiness in policy, for stop-go policies. To abandon this revenue reduction now, after it has been incorporated into the spending plans of millions of households and businesses, would be a flagrant example of go-stop policy.

We adopted the third budget resolution because we decided that additional stimulus was necessary as soon as possible. Let us stick to our plans. Let us not attempt to fine-tune the economy. We cannot allow our policies to be guided by every small movement of the economic statistics. Should we propose stimulus during the slowdown, oppose it when Christmas sales turn up, propose it again when the severe winter descends, and once again oppose it when spring raises the

temperature and our spirits?

Some say we do not need additional stimulus in 1977 because we can expect strong growth in the second and third quarters. The economy will make up for ground lost during the severe cold and gas shortages of the winter. But these catch-up effects do not add to total employment and output during 1977—they merely redistribute it. They provide no substitute for the steady fiscal policy contained in the 2-year stimulus package originally proposed by the administration and anticipated in the third budget resolution.

What will happen if we reject the stimulus provided by the rebate? The econometric models are virtually unanimous on the point-growth will be slower in the remainder of this year. The data resources model estimated that over one-half point of real growth—almost \$12 billion of output—will have been lost by the end of 1977. 250,000 fewer jobs will have been created, and un-employment will be higher. Is this the way to signal American business that the demand for their products will be strong in 1978, and that commitments to expand capacity will be rewarded with higher sales? The rebate was needed—and is needed—because the growth in final sales has been slow throughout the recovery, averaging only 4.3 percent. There is still no evidence that business investment will accelerate by itself. Investment waits for solid evidence of continued growth in sales. We need to support steady, solid growth at this point in the recovery, not to under-

Mr. President, some of those who have opposed the rebate have done so not because they believe that additional stimulus is unnecessary, but because they do not believe it will work. I would like to speak briefly to that question as well.

It has been argued that the rebate will not increase consumption expenditures because it will go into savings instead. In particular,

it is said that the rebates will simply be used to replenish savings which were used to pay fuel bills. But that is precisely the point. That is the strongest possible argument for the rebate.

How will families pay those fuel bills, and restore their savings, if the rebates are not provided? They will have to reduce other expenditures. Indeed, there is considerable danger of reduced household spending during the rest of the year for just this reason. Preliminary estimates suggest that the savings rate fell sharply in the first quarter, down nearly to 5 percent, as the fuel bills came in. Household savings were about \$17 billion lower than they would have been at

last year's savings rate.

The danger is that the savings rate will now move sharply upward, and the growth of spending will be slow. The rebate provides a quick and effective way to improve the financial position of low- and middle-income families and allow them to maintain their accustomed expenditure. The February survey of consumer attitudes done by Michigan's Survey Research Center found higher confidence among consumers who expected a tax reduction than among those who did not. I have no difficulty understanding this finding, although it seems that some of my colleagues do.

I have never been able to understand why American families would treat the tax rebate very differently from any other small change in their incomes. Economists are very good at telling us what we already know and one of the things they tell us is that people who receive very large windfalls do not spend it all very quickly. Now that is a very good theory for the winners of State lotteries and the heirs of large fortunes, but I do not see what it has to do with the average American family. For the median family the rebate would be only about 1½ percent of annual income.

For once the economists have something useful to tell us, for their studies indicate that small temporary changes in income, such as rebate, get treated much like any other income. They show that the rebate should have a substantial and pronounced effect on consumption expenditure for several quarters after it is paid, which is exactly what it was intended to do.

Dr. Thomas Juster, the director of the Institute for Social Research of the University of Michigan, has recently done a study of the effects of permanent and temporary tax changes on consumer spending and saving. He found no significant difference between permanent and temporary tax changes.

Prof. Saul Hymans at Michigan examined the effects of the 1975 tax rebate and tax cuts on consumer purchases. He found a huge increase in purchases of furniture and household equipment associated with the additional purchasing power arising from the tax reductions.

Arthur Okun of the Brookings Institution, in studying the 1968 tax surcharge, found that the experience confirmed "the general efficacy and continued desirability of flexible changes in personal income tax rates—upward or downward, permanent or temporary."

Still other studies have confirmed the difference in the effects on spending of large and small temporary income changes to

which I referred previously.

Mr. President, I do not believe we should withhold the economic stimulus this country needs because of a misapplication of economic theory, or a failure to recognize the abundant evidence which supports the use of the rebate.

I do not believe that future tax revenues should be mortgaged when the new administration is less than 3 months old, and still formulating its programs, if a clear alternative is readily available. I do not believe that we should go further in attempting to devise permanent tax reductions before we have

given the administration an opportunity to present its proposals for tax reform.

Mr. President, the way to get the economy moving again is not to put up a stop sign. When the Senate returns from recess on April 18 it will immediately consider the tax bill reported by the Finance Committee. I urge my colleagues to declare themselves in support of a steady fiscal policy and continued economic recovery by supporting the fiscal stimulus provisions, including the rebate, as recommended by the Finance Committee.

One closing point, Mr. President. On yesterday the Senate Budget Committee completed its consideration of the first concurrent budget resolution for fiscal year 1978. That resolution is not directly relevant to the \$50 tax rebate, except to this degree: that if it is not enacted, it will affect the revenues we can expect to flow from the Federal tax structure in 1978.

If the \$50 tax rebate is not approved, or if in lieu thereof Congress should enact into law the permanent tax reductions proposed by several Republican Senators—and it is their prerogative to do so—revenues that we can anticipate in 1978 will be lower than those provided for in the resolution adopted by the Budget Committee yesterday. The effect will be a larger deficit, lower revenues, lesser ability to deal with tax reform later this year, and the effects on the economy which I have taken the last few minutes to describe here for the benefit of the Senate.

So for all those reasons, Mr. President, it makes sense to enact into law this feature of the President's economic stimulus proposal.

(EVETTETT 9)

STATEMENT OF SENATOR EDMUND S. MUSKIE ON THE WITHDRAWAL OF THE AMINISTRA-TION'S TAX REBATE

Senator Edmund S. Muskie (D-Maine), Chairman of the Senate Budget Committee, issued the following statement concerning President Carter's withdrawal of support for the tax rebate and business tax proposals:

"The Administration's policy reversal on the tax rebate is disappointing. It is disappointing both because of its likely economic effects and the manner in which the decision was taken.

"The economic effects of this decision are likely to be substantial. It raises the risk of repeating the pattern of 1976, when the economy was strong in the beginning of the year and slowed down sharply at the end. This action is likely to cost about 250,000 jobs by the end of this year, at the same time that the Administration is asking shoe workers, and those in other depressed industries, to bear the heavy cost of unemployment. The Administration's goal of reducing unemployment below 6 percent by the end of 1978 will now be much more difficult to achieve.

"These costs might be necessary to bear if the economy was in danger of overheating and additional fiscal restraint was required. But this is not the case, as Chairman Schultze indicated yesterday. The unusual price increases in the last several months have been due to the effects of the winter on food and energy prices, and to inflationary momentum in the economy. They have not been caused by excess demand. There is no serious prospect that the rebat; and business tax relief would give rise to such excess demand.

"The fundamental economic reasons for the rebate remain valid. The Administration claims, on the basis of strong industrial production and retail sales figures for February and March, that the rebate is now 'unnecessary.' An accurate characterization of these data, however, would be that the first quarter may turn out to be less bad than we had feared. It now appears that real GNP growth is likely to be around 5 percent, rather than the 3-4 percent expected earlier because of the severe weather. Industrial production has rebounded strongly from its winter depression, to be sure, but is still only 2.4 percent above its 1974 peak and 5.5 percent above its level of a year ago. Capacity utilization in manufacturing, at about 81 percent, is still below its average postwar level. These are hardly the marks of an economy that is 'overheating.' With 7 million Americans out of work, what can it mean to say that two-third of the fiscal year 1977 stimulus package is 'unnecessary'?

"The tax rebate was proposed because final sales in the economy had been growing at a relatively slow pace throughout two years of recovery. Two months of good retail sales do not provide a sound basis for an abrunt reversal of this policy. The gain in retail sales was in fact stronger in the fourth quarter of 1976 than in the most recent quarter, and some of the recent strength of consumer spending may be precisely because the rebate was expected. The protests against the rebate have not come from low and middle income families. Indeed, many consumers are counting on the rebate for relief from heavy fuel bills. How can we expect to maintain consumer confidence if we cannot maintain a steady fiscal policy?

"The reversal of policy suggests a kind of 'super fine tuning' of the economy which is beyond the capacity of economists. As I stated on the Senate floor last week, 'Should we propose stimulus during the slowdown, oppose it when Christmas sales turn up, propose it again when the severe winter descends and oppose it once again when spring raises the temperature and our spirits?'

"Both the personal tax rebate and the business tax relief were proposed because investment demand has been unusually weak during the recovery. There still is no evidence that business capital spending will accelerate to boost the recovery. Is stronger investment demand now 'unnecessary'?

demand now unnecessary:

"Another factor in the disappointing recovery has been slow export growth due to the worldwide nature of the recession. The Administration stimulus package originally signalled a determination to provide U.S. economic leadership in world recovery. The stimulus package represented a commitment to vigorous expansion. We urged some reluctant and important trading partners to go and do likewise. What signals is the Administration sending them now? Will the Administration argue at the economist summit in London next month that a more vigorous expansion is suddenly 'unnecessary'?

"The Administration's action is disappointing, finally, because of the failure to coordinate fiscal policy decisions with the Congress. Reasonable men can certainly differ with respect to the composition of fiscal policy and such differences were being resolved within the legislative process. But the Administration and Congress appeared to be in agree-ment on the required direction of policy. The Administration had proposed additional stimulus, and the Congress had revised its fiscal year 1977 budget in a coordinated action. The Administration has now made an abrupt policy reversal without consideration the Congressional budget process and without adequate consultation with the Congress. It has done so on the most meagre and preliminary evidence. It may prove much more difficult to convince consumers or businesses in the future that the Government is committed to a carefully planned, deliberate and steady fiscal policy.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. HARRY F. BYRD, JR. As I understand it, the pending measure does not change any of the figures which were in the third concurrent resolution.

Mr. MUSKIE. No. The waiver resolution does not serve that function, may I say to the Senator, and does not affect those numbers at all. But the validity of those numbers is very much in the mind of the Senator from Maine, and we need to take a long and thoughtful look at those numbers in the light of these developments.

Mr. HARRY F. BYRD, JR. As I understand from the previous remarks of the Senator from Maine, any change in those numbers will be forthcoming later on in the week, perhaps, or next week?

Mr. MUSKIE. More likely next week. There is not that much pressure for change except with respect to the first concurrent resolution for the 1978 fiscal year. Since that is on the calendar, and the leadership is pushing for its consideration next week, we may have to move a little more rapidly than we might otherwise.

Mr. HARRY F. BYRD, JR. The Budget Committee would need to act if any numbers were to be changed prior to the consideration of the 1978 budget?

Mr. MUSKIE. I would think so, although I would say to the Senator our initial examination of the 1978 numbers does not suggest that the changes in the 1978 budget would be significantly large. The reason for that, of course, is that the tax rebate was a one-shot deal, with the total impact in fiscal year 1977. There is some impact on fiscal year 1978, and we do want to look at it, but it will be much smaller than the fiscal year 1977 impact. That is the big point, the fiscal 1977 impact.

Mr. HARRY F. BYRD, JR. I thank the Senator.

Mr. MUSKIE. I appreciate the presence of my good friend from Oklahoma, who is the ranking Republican member of the committee. This action meets with his approval, as I understand it, and I am happy to yield to him at this time.

Mr. BELLMON. Mr. President, I am in agreement with Chairman Muskie that the action he recommends is entirely in order. I would like to raise one point with the chairman of the Budget Committee, if I may get his attention, as to something we have discussed privately here on the Senate floor, that has to do with whether or not the action the Senate is about to take will preclude action on a permanent tax cut, if the Senate wishes to get into that.

As I understand, this action still leaves room for a permanent tax cut if we desire to get into that matter.

Mr. MUSKIE. The Senator is correct; there is still room in the Third Concurrent Resolution for tax reductions unless that resolution is changed, and this waiver resolution does not change it.

I would like to say one further thing to the Senator from Virginia with respect to this waiver resolution, a point that may have escaped my mind a few moments ago: the waiver resolution is also required, technically, to cover the extension of the 1975 tax cuts into the next fiscal year. As the Senator will recall, under an amendment offered by the Senator from Alabama (Mr. Allen) last year, we continued those tax cuts until the end of this calendar year.

The tax bill extends those tax cuts through calendar year 1978. Technically, because those cuts would not become effective until fiscal year 1978, a waiver is required for that purpose. So this waiver is very much needed technically for that purpose. I did not want to abuse the Senator's reliance on my information.

Mr. LONG. Will the Senator yield at that point?

Mr. MUSKIE. I yield to the distinguished chairman of the Finance Committee.

Mr. LONG. Let me congratulate the chairman for the fine presentation he has made.

Mr. President, I ask unanimous consent that the following staff members be granted the privilege of the floor during the consideration of H.R. 3477. We will have that revenue measure before us after we complete action on this resolution.

From the Finance Committee:

Michael Stern, Bob Willan, Bill Morris, Charles Bruce, Bill Galvin, Gordon Gilman, and Dave Swoap.

From the Joint Tax Committee:

Bobby Shapiro, Jim Wetzler, Bob Strauss, Mike Bird, Herb Chabot, Paul Oosterhuis, Bill Lieber, Dianne Bennett, Michelle Scott, Mark McConaghy, Don Ricketts, and Randy Weiss.

The PRESIDING OFFICER. Without

objection, it is so ordered.

Mr. MUSKIE. Mr. President, I see no reason for further discussion and I see no other Senators seeking recognition.

I suggest we act on the resolution. Mr. McCLURE. Mr. President, before doing that, will the Senator respond to a question?

Mr. MUSKIE. Of course.

Mr. McCLURE. As I understand, the necessity for the waiver comes about, because of the way the Budget Act is written and not because of the President's action in suggesting that the \$50 rebate is no longer necessary.

Mr. MUSKIE. That is correct. Of course, the waiver resolution has been pending on the Senate calendar for some weeks and predated the President's decision on the \$50 tax rebate. The only question before us today was whether or not we should reconsider the basis on which the waiver resolution was reported to the Senate before we take up the tax bill. It was my feeling that there was no need to reconsider it. It was required in the first instance for only two provisions of the tax bill. One was the \$50 tax rebate, which would appear to be moot now that it has been withdrawn or is proposed to be withdrawn from the bill; and, second, we needed the waiver resolution in order to continue the 1975 tax cuts through calendar year 1978. So our action in approving this waiver resolulution will not in any way be a reflection on the merits of the President's action.

Mr. McCLURE. I assume the waiver resolution as pending before us now does not prejudge that question and that the Congress could either agree with the President's suggestion, disagree with it, or adopt any other alternatives which are within the targets established by the third concurrent resolution.

Mr. MUSKIE. The Senator is correct.

May I make this point also: He knows, as a member of the Budget Committee, that waiver resolutions do not represent judgments on the substantive issue of a piece of legislation to which they apply by the Budget Committee. The only question that we consider, when we consider a waiver resolution, is whether there are adequate reasons why the legislation requiring the waiver failed to meet all the procedural requirements of the Budget Act.

When we are asked to consider a piece of legislation out of the ordinary budget process sequence, the Budget Committee has taken the position that it must have a very good reason for approving the consideration of the bill. When we give the green light we are not passing judgment on the merits. The Senator is abso-

lutely right.

Mr. McCLURE. The reason I took the time to ask the Senator this question, and I appreciate the response, is that some Members were suggesting that the waiver resolution was required by the action of the President or the recommendation of the President. I just wanted the record to be very clear that, as a matter of fact, the waiver resolution is totally unrelated to that decision by the President of the United States. The Congress and the Senate still have the same latitude to make decisions they did under the third concurrent resolution.

Mr. MUSKIE. The Senator is correct. I asked the committee to reconsider the waiver resolution only for the purpose of using this occasion to give the Budget Committee an opportunity to determine whether or not there was any policy option which it would like to pursue. The overwhelming response of the committee was that it did not, and so we come here simply supporting the waiver resolution for the reasons that we reported it in the first instance.

in the first instance.

Mr. McCLURE. I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was agreed to.

Mr. MUSKIE. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. LONG. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

TAX REDUCTION AND SIMPLIFICATION ACT
OF 1977

The PRESIDING OFFICER. The clerk will state the pending business.

The assistant legislative clerk read as follows:

A bill (H.R. 3477), to provide a refund of 1976 individual income taxes, and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform.

UP AMENDMENT NO. 155

Mr. LONG. Mr. President, on behalf of the Committee on Finance, I wish to modify the committee amendments as follows, and I do so modify them:

On page 2, in the table of contents, strike out the matter relating to title I of the bill.

On page 3, beginning with line 7, strike out through line 7 on page 26.
On page 62, line 3, strike out "April 30,"

and insert in lieu thereof the following: "May 31,".

On page 64, line 16, strike out "April 30," and insert in lieu thereof "May 31,".

The PRESIDING OFFICER. The committee amendments are so modified.

Mr. LONG. Mr. President, in due course, after I have made my statement in chief, and perhaps after others have made their opening statements, I intend to ask unanimous consent to modify the bill to delete title I and also to delete the reference to title I in the table of contents. If that motion is objected to, then I will make a motion to recommit and report back forthwith without title I in the bill. Title I relates to the \$50 refund which the President recommended and then, after the passage of time, he felt it was no longer desirable to proceed with that recommendation. I believe it is generally agreed by all concerned that, in view of the change of attitude with regard to that major item, it should be eliminated from the bill. We will proceed to do that one way or the other, either by unanimous consent or by motion, later in the handling of this measure.

Mr. President, H.R. 3477, the Tax Reduction and Simplification Act of 1977, as amended by the Committee on Finance, is the first major tax legislation of the 95th Congress. First, it addresses the need for increased consumer spending and business investment to provide the additional economic stimulus necessary to increase the rate of economic growth in 1977 and 1978. With such additional growth, we will be able to reduce unemployment without reigniting inflation. Second, the bill addresses the need to simplify our tax system so that taxpayers can more easily and accurately fill out their tax returns.

Mr. President, there are some of us who still believe that there is need for economic stimulus, and there is a considerable amount of stimulation for the economy that remains in this bill.

In the 9 months ending in March 1976, the value of goods and services produced in the country, adjusted for inflation, grew at an annual rate of 8 percent. In the second quarter of 1976, however, the economy grew at an annual rate of 4.5 percent; in the third quarter this rate fell to 3.9 percent, and in the fourth quarter it fell to 2.6 percent. Even though there are indications that growth improved in the first quarter of this year, the economy is operating well below its potential.

Along with this sluggish economic growth, there has been persistently high unemployment, which is of great concern to the committee. The unemployment rate averaged above 7.5 percent in 1976. More than 7 million Americans are unable to find employment. The sluggish economy which has resulted in this high unemployment has particularly hurt the poor and disadvantaged.

The Finance Committee concluded that the tax stimulus should consist of a permanent tax cut to increase consumer spending, a jobs tax credit to create additional employment, and also an increased investment credit designed to stimulate investment. In line with President Carter's recommendations, the

committee has agreed to delete the tax rebate in the House bill.

The committee has added the increased investment credit to the House bill, because spending for new plant and equipment continues to be sluggish as well; and, if not reversed, the current shortfall in plant expansion will lead to production bottlenecks late in the recovery and a renewal of the inflationary pressures comparable to those that were experienced in 1973 and 1974. The weakness in new plant and equipment expenditures is highlighted by noting that at this point in previous recoveries, such investment averaged 5.3 percent above the previous peak. In this recovery, investment remains at 11.8 percent below the previous peak

On balance, the Finance Committee concluded that there was a need for an economic stimulus to insure that steady growth would proceed through 1977 and 1978 and reduce the unacceptably high levels of unemployment. An overall tax and spending package for fiscal year 1978 of \$18 billion, of which \$8 billion represents extension of existing tax cuts, seemed to balance the competing objectives of a reduced level of unemployment and a continued moderation in rates of inflation.

As the Senate and most of the Nation are aware, I publicly supported the rebate on national television a little over a week ago. The number of persons unemployed remains quite high, and I think there is a good case for providing a temporary stimulus to consumer spending in the middle of this year. Until recently, the administration shared this view and testified before the Finance Committee on the need for the rebate.

However, in recent weeks economic indicators suggest that the economy performed better than expected in February and March. President Carter has decided that the economy no longer needs the rebate, and he has urged us to delete it from the bill. In view of this request, the committee amendment deletes the rebate.

The committee also retains two important tax reductions for individuals. The increase in the standard deduction provides a tax cut at an annual rate of \$6 billion for 47 million taxpayers. Most of this tax reduction goes to people with low incomes.

Also, the committee bill retains the House extension through 1978 of the tax cuts enacted as economic stimulus measures in 1975. If these are allowed to expire at the end of 1977 as presently scheduled, the stimulus in this bill would be almost entirely offset.

The second problem this bill addresses is the burden on taxpayers in filling out their individual income tax returns. Each spring we hear that the tax forms have become longer and more complicated. Almost 50 percent of all taxpayers pay other people to get assistance in filling out their tax returns. In addition, the Internal Revenue Service has reported that significant numbers of tax returns filed early this year contained errors. The major sources of errors involved computing the standard deduction and computing the general tax credit.

I want to point out that we have been able to make a major effort toward simplification in this bill. This has been achieved by revising and raising the standard deduction, and building it, as well as the general tax credit and the personal exemptions, directly into tax tables. Thus, taxpayers will have to go through fewer steps to complete their tax returns. They will simply look up in the tax table the amount of tax due rather than perform many calculations. These tables will be used by 96 percent of all taxpayers.

Overall, the committee bill provides \$2 billion of tax cuts for individuals, and \$900 million for businesses in fiscal year 1977. For fiscal year 1978, the committee bill provides \$14.9 billion of tax cuts to individuals, and \$3.4 billion to businesses. Unlike the House bill, the tax cut for business is in the form of a stimulus for new investment as well as a stimulus for the hiring of new employees. The House bill only provided for a tax credit for new employees. The change in the effective date for certain retroactive provisions of the Tax Reform Act of 1976 will reduce revenues by \$400 million in fiscal year 1977, and the authorizations for the WIN program will increase outlays by \$400 million in fiscal years 1978 and 1979.

I shall now review the specific provisions of the committee bill.

The first part of the tax cut is an increase in the standard deduction, which also provides a major simplification, which I will discuss later. In reviewing the House bill, the committee was concerned that the House created a "marriage penalty" of \$1,800 for everyone. Under current law, this reduction in the standard deduction resulting from getting married ranged from \$1,300 to \$2,-000. By making it \$1,800 for everyone, the House bill worsened the situation for large numbers of persons. Accordingly the Finance Committee bill changed the standard deduction in the House bill to a flat \$2,200 for single persons and \$3,200 for heads of households and married couples filing jointly. Under present law the standard deduction ranges from \$1,-700 to \$2,400 for single persons and from \$2,100 to \$2,800 for joint returns. These changes are to be reflected in reduced withholding beginning on June 1 of this year. This higher standard deduction provides a \$1.5 billion tax cut in fiscal year 1977 and \$8.1 billion in 1978. The full year, permanent revenue loss is approximately \$6 billion.

The second part of the committee's bill tax cut is an elective program of an additional 2 percentage points in the investment tax credit or a new jobs tax credit. The first part of the tax cut package is designed to increase consumer spending and stimulate economic growth. The House bill provided for only a new jobs tax credit. The committee, however, was concerned that new investment has been at a low level, and concluded that an additional investment tax credit would significantly raise in-

The committee bill modifies the House new jobs tax credit in a number of ways which will enhance its effectiveness and limit possible abuses. The new jobs credit under the House bill was limited to \$40,000 per employer per year, for a credit equivalent to hiring 24 new employees. The committee bill eliminates this ceiling to make the credit available with respect to a larger portion of the work force. Under the House bill, the new jobs tax credit equaled 40 percent of the first \$4,200 of wages paid subject to the Federal Unemployment Tax Act—FUTA—in excess of 103 percent of such wages paid in the prior year. In order to keep the overall revenue impact of the credit within the total size of the package, the rate of credit was reduced to 25 percent.

The committee amendment also modifies the House jobs tax credit to limit possible abuses. First, the committee amendment requires that firms reduce their ordinary deduction for wages by the amount of the credit. This will prevent individuals in high brackets from receiving tax reductions under the new jobs credit that exceed 100 percent of the wages paid to new employees. Second, in order to prevent inordinately large tax reductions to new firms, the committee amendment limits the wages on which the credit is computed to no more than 50 percent of the base year FUTA wages.

The third part of the tax cut package is the extension of the 1977 tax cuts through 1978. This will also strengthen the economy. The extension of these cuts through 1978 is needed for our continued economic growth, and providing this extension early in the year is necessary to enable consumers and businesses to plan their affairs through 1978 with some certainty about tax policy.

These tax cuts include the general tax credit, the earned income credit, and corporate rate reductions for small businesses. The general tax credit equals the greater of \$35 per capita or 2 percent of the first \$9,000 of taxable income. Extension of the general tax credit will reduce revenues by \$6.8 billion in fiscal year 1978, and \$3.9 billion in fiscal year 1979.

The earned income credit equals 10 percent of the first \$4,000 of earned income, phased out as adjusted gross income rises from \$4,000 to \$8,000. It is limited to families with dependent children and may exceed tax liability. The extension of the provision will reduce revenues by \$1.3 billion in fiscal year 1979.

The corporate tax reduction has two parts: An increase in the surtax exemption from \$25,000 to \$50,000 and a reduction in the tax rate from 22 to 20 percent on the first \$25,000 of corporate taxable income. Extension of this provision reduces revenues by \$1 billion in fiscal year 1978 and \$1.3 billion in fiscal year 1979.

Overall, the 1-year extension of these individual and business taxes will reduce taxes by \$7.8 billion in fiscal year 1978.

The second major goal of the committee bill involves simplification of the filling out of the individual income tax return. This simplification is achieved by revising the standard deduction and the tax tables. Since the standard deduction is raised to a flat \$2,200 for single persons

and \$3,200 for married couples filing jointly and heads of households, the tax tables and rate schedules will have the standard deduction built into them. Thus, a typical taxpayer who does not itemize will simply find his tax in tables based on adjusted gross income and the number of his exemptions. Because the standard deduction is built into the tables, taxpayers who itemize their deductions will deduct only the amount of their deductions in excess of \$2,200 or \$3,200, depending on whether they are single or married. Thus, the standard deduction is changed into a floor under itemized deductions.

This simplification reduces the number of steps a taxpayer who does not itemize his deductions must make to compute his taxes from eight to two. For a taxpayer who itemizes his deductions, the simplification reduces the number of steps from eight to six.

The increase in what is now the standard deduction will mean that it will no longer be worthwhile for 7 million taxpayers to itemize deductions, reducing the number of taxpayers who itemize their deductions to 24 percent of the total. Also, 96 percent of all taxpayers will be able to find their taxes from the tax table without having to make separate calculations of their personal exemptions as general tax credit.

In addition to providing for economic stimulus and simplification, the Finance Committee bill added several provisions related to the retroactive exclusion of sick pay and income earned abroad as a result of the 1976 Tax Reform Act. These provisions will now take effect this calendar year, rather than in calendar 1976, and accordingly will alleviate what otherwise would be undue hardship.

The committee bill added three other tax provisions to the House bill, relating to business use of the home for day care, rapid amortization for child care facilities and travel expenses away from home for State legislators. Further, the committee added a provision to increase the authorizations for the WIN program by \$435 million for fiscal years 1978 and 1979

The committee also provided for a series of studies and reports to the Congress on the economic and employment impact of the principal temporary tax changes in the bill—the new jobs tax credit and the increased investment credit—by the Department of the Treasury, the Council of Economic Advisers, the Congressional Budget Office, and the Board of Governors of the Federal Reserve System.

This package of economic stimulus and simplification is the first step we are taking to regain our economic health and achieve a tax system that is easily complied with.

Mr. President, I urge the Senate to agree to the committee amendments to H.R. 3477.

Mr. President, I am not aware of any objections to modifying the bill as recommended by the committee this morning. When we discussed the rebate in the committee this morning, it was unanimously agreed that we should recommend that title I be stricken from the

bill. I have submitted a modification of the Committee amendment which is at the desk to strike title I, and I ask unanimous consent that title I be stricken along with the reference to title I in the table of contents.

Mr. CURTIS. Mr. President, reserving the right to object, and I shall not object, I would like to make certain for the record just what is involved here that will be stricken.

What would be stricken under the unanimous consent proposed?

Mr. LONG. The \$50 tax rebate which was passed by the House. The rebate is a part of the House language in the bill, and the committee agreed this morning to delete the rebate.

When we discussed the \$50 tax rebate in committee this morning, as the Senator knows, it was agreed that because of the improved economic conditions and also the President's concern about inflation and the passage of time, the rebate should be deleted from the bill

Mr. CURTIS. One more question. That means there would remain before the Senate as the pending business the House bill as reported out by the Finance Committee?

Mr. LONG. That is exactly correct.
Mr. CURTIS. And all rights to offer
amendments to the remaining parts of
the bill or add-ons will still be preserved?

Mr. LONG. The Senator is exactly correct.

Mr. CURTIS. No objection on my part.
Mr. HARRY F. BYRD, JR. Mr. President, reserving the right to object, and
I shall not object, what the Finance
Committee did today and what it recommends to the Senate is to follow President Carter's recommendation that the
\$50 tax rebate be eliminated from the
pending legislation.

President Carter last week stated that enactment of this \$50 rebate would be inflationary. The representative of the Treasury Department in testifying before the Finance Committee today reiterated that statement saying that the rebate would be inflationary.

The proposed \$50 rebate would reduce revenue by approximately \$10 billion. The rebate, however, is only one part of the President's total economic package. The other part provides for an increase in spending of from \$20 to \$22 billion. The rebate, therefore, is approximately one-third of the President's total economic program.

What the Senator from Virginia suggests is that, if the \$50 rebate is inflationary, as President Carter says it is and as the Treasury Department says it is, a proposition to which I agree, then most certainly an increase of \$20 to \$22 billion in spending is even more inflationary.

While I shall support the proposal of the able Senator from Louisiana, I should like to see the Carter Administration go further than it has gone and scrap its proposed increase in spending of \$20 to \$22 billion. Most certainly this spending will be highly inflationary. It certainly is bound to be highly inflationary as compared to the \$10 billion rebate which both the President and the Treas-

ury Department state would be inflationary.

I believe that what we should do with this entire package is to concur in the President's proposal to eliminate the rebate and then, having done that, eliminate the increase in spending which he proposes; because that, too, would be inflationary, just as the President says the rebate would be inflationary.

Mr. BENTSEN. Mr. President, will the

Senator from Louisiana yield?

Mr. LONG. Mr. President, may we have agreement on the unanimous-consent request?

The PRESIDING OFFICER. Is there objection to the request of the Senator

from Louisiana?

Mr. BUMPERS. Mr. President, reserving the right to object, I apologize. I was not on the floor when the request was made. Will the Senator restate it, please?

Mr. LONG. The request is to eliminate title I, which is the \$50 rebate, and reference to it in the table of contents. That, basically, is what the Senator's amendment would have done. Apparently the logic of the Senator's position got through to the President during the recess. The committee has considered the matter this morning, and the committee is recommending that the rebate be stricken from the bill.

Mr. BUMPERS. I understood that the distinguished Senator was going to move to recommit this bill, with instructions to delete title I. Is that not now the case?

Mr. LONG. If I am unable to obtain unanimous consent to strike the rebate, I will make the recommittal motion; but I hope we can do the same thing by unanimous consent. I do not think the Senator from Arkansas would object to that.

Mr. BUMPERS. I say to the Senator

that I certainly do not object.

I was very pleased to see that the President finally saw the wisdom of my views in striking the rebate. But he also said that he would like to see the increase of 2 percent in the investment tax credit deleted, and I am curious as to why the Senator is not also including that in his request.

Mr. LONG. The investment tax credit provision is something that the committee thought well of, and it is the view of the committee that that should be voted on by the Senate. Of course, if the Senator does not agree with it, he has every right to oppose it in any fashion he wishes. He either can object to it when it is voted on or he can move to strike it. He has his options with regard to that. There are some Senators who strongly favor the 2-percentage point increase in the investment tax credit, even though the President has changed his view with regard to that matter.

Mr. BUMPERS. There are a lot of Senators, of course, who favor the rebate.

I do not want to get into the merits of the argument at this point. If the President was correct, that the economic indicators are such that the rebate is no longer necessary—and I certainly agree with him, and I even agree with him on other grounds besides that one—if the economic indicators are such that he

felt comfortable in deleting that and in deleting the increase in the investment tax credit, I simply think we should honor both requests. I am prepared to go further and to take the jobs incentive provision out, too, which seems to me like an administrative nightmare, and leave the increase in personal reductions and personal income credits, the earned income credits, and let it go at that.

Mr. LONG. The Senate may want to do that. The Senator certainly does not restrict himself in any respect whatsoever by agreeing that we eliminate the \$50 refund. I suggest that the Senator go along with us on climinating the \$50 refund now; and if he wishes to oppose the investment tax credit or the job incentive credit, he can exercise his right to do so when we get to that matter. Those provisions are not in title I of the bill which I am asking consent to strike.

Mr. BENTSEN. If I may interrupt the Senator from Louisiana, I understand the point of view of the Senator from Arkansas. I do not agree with him. However, I believe that if the matter went back to the Committee on Finance there is no question as to how it would come back to the floor. It would come back in the same form. I think that is very much the consensus of the committee. So I believe it would be appropriate to let the manager of the bill handle it under the procedure he has outlined. That would get us a much quicker resolution of the issue the Senator is talking about, and the Senator will have ample opportunity to offer his amendment on the floor and debate it here. I think the result is going to be the same in the committee.

Mr. BUMPERS. I thank the Senator. I am disposed to honor that request, but I should like to make this point before

withdrawing my objection.

I was just listening to the Senator from Virginia talking about \$22 billion in expenditures, which he felt was unnecessary. The Treasury incurs a deficit in two ways: One is through outright expenditures of money we do not have; the other is through tax incentives by which the Treasury actually collects less in taxes. One builds a deficit just as fast as the other method. It is my understanding that the increase in the investment tax credit to 12 percent was going to cost the Treasury \$2 billion. I am not sure what the jobs incentive provision is going to cost the Treasury.

All I am saying is that I, as does the Senator from Virginia, feel that we have to get cracking on balancing the budget and helping the President keep his commitment for 1981. I am prepared to help him in both ways—cutting down on expenditures and cutting down on unnecessary tax incentives.

In any event, I appreciate the Senator's viewpoint, and I am going to accede to his request, with the understanding that I probably will offer amendments to strike both of those other parts of title II as soon thereafter as I can.

Mr. BENTSEN. Mr. President, H.R. 3477, the Tax Reduction and Simplification Act, will provide needed tax relief for individuals and at the same time simplify our tax system for the average

American. The increase in the standard deduction in this legislation would cut taxes for about two-thirds of all taxpayers by an average of over \$100. These tax reductions would provide a partial offset to inflation for the average American family.

The bill would also considerably simplify income tax returns and the tax computation for almost all individual taxpayers. At present, a family of four with a \$15,000 income which claims the standard deduction has to make six computations involving deductions, exemptions, and a tax credit. Using the simplified form proposed by this legislation, they would make no computations, rather they would simply look in the new tax tables to determine the amount of tax they owe.

H.R. 3477 extends the 1977 individual and corporate tax reductions through 1978, including the general tax credit, the earned income credit, and the corporate rate reductions. Failure to extend these provisions would result in a tax increase for tens of millions of Americans.

Mr. President, the tax simplification provisions of H.R. 3477 will help ease the burden on taxpayers in filling out their individual income tax returns. Complex Federal tax forms have caused millions of Americans to make errors when they filed their income tax returns this year. It is getting to the point that it takes a certified public accountant to fill out even the short version of the Federal income tax return. Back in 1954, all you had to be able to do was add and fill in about 30 blanks if you used the short form. But today, according to the General Accounting Office, you have to add, subtract, calculate percentages, multi-ply, and fill in 50 blanks. The Internal Revenue Service reports that in the early weeks of the current tax season about 11.5 percent of the tax returns using the short form contained errors. At this rate some 2.1 million of all the short forms filed will have errors. The major sources of error involved computing the standard deduction and computing the general tax credit. The taxes people pay are enough of a burden without forcing them to hire a lawyer or an accountant to learn how much they owe.

This bill makes a major effort toward simplification. This is achieved by revising and raising the standard deduction, and building it, as well as the general tax credit and the personal exemptions, directly into the tax tables. Thus, taxpayers will have fewer steps to go through to complete their tax returns. They will simply look up in the tax table the amount due rather than perform many calculations. This will be true for most taxpayers who itemize their deductions as well as almost all those who take the standard deduction.

The increase in what is now the standard deduction will mean that it will no longer be worth while for over 7 million taxpayers to itemize deductions, reducing the number of taxpayers who itemize their deductions to 25 percent. Also, about 95 percent of all taxpayers will be able to find their taxes from the tax table without having to make separate calculations.

The Senate Finance Committee bill changes the standard deduction to a flat \$2,200 for single persons and \$3,200 for married couples filing jointly and for heads of households. Under present law. the standard deduction ranges from \$1,-700 to \$2,400 for single persons and from \$2,100 to \$2,800 for joint returns. These changes are to be reflected in reduced withholding beginning May 1.

Inflation alone boosted income taxes by \$5 billion in 1976 as inflation pushed wage earners into higher tax brackets. The tax cut will help offset this infla-

tion-induced tax increase.

The Senate Finance Committee bill also extends the 1977 tax cuts through 1978. This will strengthen the economy because extension of these cuts through 1978 is needed for our continued economic growth and providing this extension early in the year is necessary to enable consumers and businesses to plan their affairs through 1978 with some certainty about tax policy.

These tax cuts include the general tax credit, the earned income credit, and corporate rate reductions for small businesses. The general tax credit equals the greater of \$35 per capita or 2 percent of the first \$9,000 of taxable income. The earned income credit equals 10 percent of the first \$4,000 of earned income, phased out as adjusted gross income raises from \$4,000 to \$8,000. It is limited to families with dependents and may exceed tax liability. The corporate tax reduction has two parts: an increase in the surtax exemption from \$25,000 to \$50,-000, and a reduction in the tax rate from 22 percent to 20 percent on the first \$25,-000 of corporate taxable income.

Mr. President, in addition, this bill includes an optional job creation tax credit for 1977 and 1978 to stimulate employment in the private sector, especially for smaller businesses which are labor-intensive. A jobs credit will help reduce both unemployment and inflation and put those employed on private payrolls.

This bill provides businesses with a temporary increase in the investment tax credit from 10 percent to 12 percent. This change will help create jobs in capital-intensive industries. Increased investment is essential to expand and modernize industrial capacity in order to prevent inflationary bottlenecks and shortages in the future. Greater investment is needed to maintain American competitiveness in the world markets.

This new jobs tax credit is designed to directly address the unemployment problem and provide an incentive, particularly, for small and medium-sized businesses, to hire new employees. Essentially, an employer will get a credit equal to 25 percent of the excess of the first \$4,200 of 1977 wages for each employee over 103 percent of the first \$4 .-200 of 1976 wages. The jobs credit is based on increases in wages over the base period, so that to benefit from the credit, employers will have to do more than simply maintain current employ-ment levels. The credit is a 2-year program for 1977 and 1978 so that, to benefit from it, employers must begin hiring shortly. The credit has several limitations designed to prevent abuses.

A jobs tax credit reduces both unemployed and inflation by lowering labor costs to business and puts those unemployed on private payrolls.

For the vast majority of businesses, this jobs credit will require no additional recordkeeping, tracing of employees, or extensive searching through old records; they will use records already maintained in order to file required Federal Unemployment Tax Act—FUTA—returns. Thus, employers can easily understand their status with respect to this credit. In the interests of simplicity, no records of employee hours, no distinctions between part-time and full-time employees and no tabulations of new employees are necessary.

The temporary increase in the investment tax credit in H.R. 3477 is essential to encourage greater investment for the expansion and modernization of plant and equipment. This is needed to prevent inflationary bottlenecks and to insure that we can remain competitive in the world market. We cannot have high employment and a balanced budget without high levels of business investment. The Nation needs increased investment to boost productivity and provide jobs.

The House version of the tax bill would provide no stimulus at all to capital investment. But this is precisely where the economy needs bolstering the most. Spending on new plant and equipment has lagged all through the recovery from the 1974 and 1975 recession. If it does not pick up distinctly within the next year, the upswing in business is likely to abort. And if it does not maintain a high level over the long run, the United States will be unable to provide jobs for its growing labor force.

In 1973, gross fixed investment-expenditures for new housing, plant and equipment, measured in 1972 dollars, was \$190.7 billion. In 1974, gross fixed investment fell to \$173.5 billion, a 9 percent decline, and in 1975 it fell to \$149.8 billion, a 21 percent decline from 1973 and a 14 percent decline from 1974. Fixed investment rose to \$162.8 billion in 1976, an 8.7 percent increase over 1975; however, to date it is still below the 1974 level. In the last quarter of 1976, investment in equipment actually declined.

The weakness in new plant and equipment expenditures is highlighted by noting that at this point in previous recoveries, such investment has averaged 5.3 percent above the previous peak. In this recovery, investment remains 11.8 percent below the previous peak.

Today businesses lack confidence to invest in expansion and modernization. Real after-tax return on investment, adjusted for inflation, fell from 9.9 percent in 1965 to 2.4 percent in 1975, and in 1976 it rose to about 3 percent.

Certainly this sort of return does not inspire management to take risks on new investment. The investment tax credit directly rewards investment, thus creating jobs to build the new plant and equipment, and at the same time, increasing industrial capacity which is a hedge against the inflationary pressure of shortages that are likely to appear in the future. Industrial capacity pressures may emerge in basic industries unless we promote new investment now.

Of the many factors that influence economic growth rates, none is more important than the level of capital investment. A strong rate of new capital investment is required to generate sustained economic growth. However, during the 1960's the United States had the worst record of capital investment among the major industrialized nations of the free world. A study prepared by the Department of the Treasury indicates that total U.S. fixed investment as a share of national output during the time period 1960 through 1973 was 17.5 percent. The U.S. figure ranks last among a group of 11 major industrial nations; our investment rate was 7.2 percentage points below the average commitment of the entire group.

Mr. President, at this point in the RECORD, I ask unanimous consent that a table be printed illustrating these statistics.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Investment as percent of real national output 1960-73

		Non-
		resi-
	Total	dential
	fixed 1	fixed
Japan	_ 35.0	29.0
West Germany		20.0
France	_ 24.5	18.2
Canada		17.4
Italy	_ 20.5	14.4
United Kingdom	_ 18.5	15.2
United States		13.6
11 OECD Countries		19.4

The PRESIDING OFFICER (Mr. DUR-KIN). Is there objection to the request of the Senator from Louisiana with respect to title I? The Chair hears none, and it is so ordered.

EXCLUSION FOR SICK PAY

Mr. LONG. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 1828.

The PRESIDING OFFICER (Mr. Dur-KIN) laid before the Senate a message from the House of Representatives announcing its action on amendments of the Senate to H.R. 1828, as follows:

Resolved, That the House agree to the amendments of the Senate numbered 2, 3, and 4 to the bill, (H.R. 1828) entitled "An Act relating to the effective date for the changes made by the Tax Reform Act of 1976 to the exclusion for sick pay."

Resolved, That the House disagree to the amendment of the Senate numbered 1 to the

aforesaid bill

Resolved, That the House agree to the amendment of the Senate to the title of the aforesaid bill.

Mr. LONG. Mr. President. I move that the Senate insist on its amendments and request a conference with the House of Representatives thereon, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to, and the Presiding Officer appointed Mr. Long, Mr. Talmadge, Mr. Ribicoff, Mr. Harry F. BYRD, JR., Mr. HANSEN, and Mr. DOLE conferees on the part of the Senate.

TAX REDUCTION AND SIMPLIFICA-TION ACT OF 1977

The Senate continued with the consideration of the bill (H.R. 3477) to provide for a refund of 1976 individual income taxes, and other payments, to reduce individual and business income taxes, and to provide tax simplification

Mr. MATSUNAGA. Mr. President. I ask unanimous consent that Mr. Edward Eng, a member of my staff, may have the privilege of the floor during the debate on H.R. 3477.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CURTIS. Mr. President, before we begin considering this tax bill, I wish to express my gratitude to the distinguished chairman of the Committee on Finance, Mr. Long.

There are many competing and conflicting forces at play when we undertake to write a tax bill. They are all worthy; they are all well intentioned; they have sound ideas. After all, many things can go into a particular bill. It is always a task to guide a bill through and do what should be done for our economy.

Some questions have come to my mind about this bill in the last few days. Prior to that time, our attention was focused upon the proposal for a rebate. Many people supported that idea. Some of us did not. Those of us who did not were thinking in terms of an alternative. Now the tax rebate is no longer before us.

The President of the United States has decided against the tax rebate, and it has now been stricken from the bill.

I think it points up that this bill should be thoroughly debated, debated at length, not for the purpose of a delay to defeat or a delay to demand a compromise, but a very thorough debate so that we might think about the economics involved, so that we might devote our attention to the economy of the United States, our budget, what the deficit means, and what these various tax proposals means as they affect the economic well-being of our people, of employment, and of a vibrant forward-moving econ-

For that reason I do not stand here with hard and fixed views as to what amendments, if any, should be offered. I do believe we ought to take time to thrash out here on the Senate floor the taxation principles that are involved.

Mr. President, this is a \$21.5 billion bill. This has an impact upon the American people of \$2.8 billion in fiscal year 1977 and \$18.7 billion in fiscal year 1978 and, therefore, I think we should weigh it well.

Those of us who are close to the scene sometimes forget what the effect of our words is. A few months ago the President of the United States was raising doubts in the minds of all Americans about our economy, about whether or not we were moving in the right direction. He changed his mind. He said the economy is getting better, the employment picture is better, the inflation situation is

By so stating, I think he made it better. I think he directed the minds, attention, and thoughts of millions of Americans along the line that this Governwas doing better than they thought.

Now, of course, it is natural that those things come into politics. The outs tells us that everything is wrong and the ins defend everything by saying everything is right.

But laying that aside, the fact remains that what we do and say here can result in more business, more jobs, the expansion of industry, new chances and opportunities. If we make unsound decisions, make decisions that adversely affect our system of private enterprise, we can discourage industry, we can cause plans for expansion and building of factories to be postponed or abandoned.

We can cause investors to say, "Yes, I think we ought to do this." Then they invest their money and an idea is developed, a factory is built, products are produced, somebody has to transport them, somebody has to finance them, somebody has to insure them and, thus, we have a vibrant private enterprise economy.

Mr. President, one of the things that disturbs me in what I hear about the President's energy bill is that it is not based upon production and more production. Oh, we can conserve, we can close every factory in the country, and it would conserve energy, but it would ruin our economy.

So our attention needs to be turned toward production, and this Congress should retreat from some of the punitive measures in the field of taxation and elsewhere against the producers of energy if we are to have a vibrant economy.

Mr. President, I have some remarks I wish to make in a few moments, remarks dealing with the specifics in the bill as it is now before us, the House bill as reported from the committee.

I must leave the floor for a few moments and, if there is no objection, I ask unanimous consent to yield to the distinguished Senator from Missouri (Mr. Danforth), with the understanding that I may again have the floor when he

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The Senator from Missouri.

Mr. DANFORTH. Mr. President, shortly after the administration made its proposals for the economy, a parade of witnesses appeared before various committees of Congress. In the Finance Committee we received testimony from a triumvirate which included Mr. Charles Schultze, the chairman of the Council of Economic Advisers; Mr. Michael Blumenthal, the Secretary of the Treasury; and Mr. Bert Lance, who is the Director of the Office of Management and Budget. They presented their arguments for the program they were presenting to Con-

Essentially their arguments these: That while the economy was facing the prospect of some upturn, the expansion in the economy was not high enough to really address in any serious way the unemployment problem we were then experiencing. Therefore, Congress should act in order to provide additional stimulus and increased expansion over and above the normal recovery of the econmoy.

Those proposals were made in January of this year, and the unemployment rate in January was 7.3 percent.

In March, the latest available figures we have, the unemployment rate again was 7.3 percent, and now the administration's latest position is that the recovery is strong enough that suddenly we do not need the kind of tax stimulus which was argued for just a couple of months ago.

The bill as it is now before us does not have the most controversial feature of the administration's former position in it. It does not have the rebate, but it still is a very substantial program we are asked to vote on.

In its present form it would call for revenue reductions of about \$8 billionmore than \$8 billion-in 1977, and more than \$18 billion in 1978. So we are not dealing with a trivial matter, although as a stimulus proposal it is certainly pale compared with the bill as it was originally introduced.

Now we are here to debate and to vote on a bill which would provide a tax stimulus for the economy. Something happened last week that caused the administration in a very short period of time to fundamentally change its position on the size and nature of the stimulus that was proposed.

In a period of literally 24 hours or 48 hours the administration made a complete about face. In a period of a week the President turned from being an advocate of the rebate as a necessary part of his entire stimulus program to an abandonment of the rebate. The Secretary of the Treasury in a period of a day or 2 days turned from being a public spokesman in favor of the rebate to being a person who, I understand, now takes the position that the rebate is no longer necessary.

I have never advocated the rebate. It did not appear to me to be a proposal that made very much sense for our economy. It did not appear to me to be sound to borrow from the Treasury, divide that borrowing of about roughly \$11 billion into \$50 segments and then distribute those \$50 checks throughout the country. And I think that some of the same questioning of the rebate proposal was engaged in by Senators on both sides of the aisle in the Senate and was engaged in by people in the administration itself.

And certainly economists, a number of them, questioned very seriously the efficacy of the rebate as a means of improving the employment situation. However, that was the proposal that was before Congress and, whether it was a good proposal or a bad proposal, in the Finance Committee we made a decision on it on the basis of evidence that was presented before us, projections on the future of the economy that were presented to us and testimony on the part of leading spokesmen from the administration.

I am not entirely certain as to what happened in the period of 24 hours or 48 hours last week to change the administration's position. We had very abbreviated testimony, not from the upper echelon administration officials but from others today in the Finance Committee, stating abbreviated, summary reasons why that rebate idea has now been scrapped. But those were very summary positions.

When asked about the administration's projections for such fundamental matters as gross national product, inflation, and unemployment, over the next year or the next 2 years, we were told that those figures are not available yet and, in fact, they will not be available until next week. So based on figures that are not in existence, on estimates as to which who knows what the grounds of those estimates are, based, it seems to me, on very little evidence and very little factual information, the administration has done a reversal on the rebate question.

I point out that in January, the month when the rebate was proposed to Congress and to the country, the unemployment rate was 7.3 percent. In March the unemployment rate again was 7.3 percent. It is apparent that the recovery that the economy is undergoing, while there is some recovery, remains inadequate, and the same factors of the basic economic situation, it seems to me, that caused the administration to propose its ideas in January, are still in existence.

The Senate is called upon now to act on a tax stimulus bill without the benefit of the kind of in-depth analysis and statistical data that was brought to us last January. We are expected, as a mat-ter of fact, simply to follow the administration's lead, and when it wants a rebate we give it a rebate and when it does not want a rebate we take the rebate away-no questions asked.

But it seems to me that if we are going to be participants in exercising our responsibility to try to formulate sound economic policy for this country we are going to have to be informed as to the state of the economy, as to projections for unemployment, inflation, and gross national product over the next 11/2 or 2 years. We are going to have to have an analysis by experts as to the degree to which the unemployment problem is cyclical, the degree to which the unemployment problem is structural, and what steps, if any, should be taken to remedy the situation.

When we have over 7 million Americans who want jobs who cannot find jobs, we have a serious problem on our hands. That problem has not, in fact, disappeared with the disappearance of the rebate. People are still out of work and many of them have been out of work for a half a year, a year, or more. And it seems to me that we cannot now say well, let us move on to the energy problem or let us move on to some other problem and forget about the unemployed in this country. We have to be responsive to their needs. We have to address ourselves not only to the economic tragedy but also to the human tragedy that is involved with high percentages and high numbers of unemploy-

There is, it would seem to me, absolutely no reason to rush this truncated tax stimulus package through the Senate at this time when we have not had the benefit of sound economic analysis. If we are going to develop an effective tax stimulus program-and it is my opinion that we should—it is my opinion that we should not do nothing, it is my opinion that we should not be saying to the poor. let them eat cake, but if we are going to have a tax stimulus program that works, that provides jobs for people who are now unemployed, that provides jobs which are lasting jobs and meaningful jobs for those who do not now have them, we have to put a little more thought into what we are doing than to simply listen to very shortened, abbreviated testimony on the part of second echelon administration officials before the Finance Committee today.

So I hope that we will address ourselves to the question at hand. I hope that the Senate will be preparing tax stimulus measures, if they are called for. not simply by writing out proposals on the back of an envelope and seeing what sounds reasonable today, but on the basis of the best available information and the best available professional judgment. I do not believe that we are doing that now, and I think we should begin doing that in the very near future.

What is the great rush about getting this bill enacted into law immediately? What is the great rush about getting it through the Senate right now? There is no rush. The President has already changed his mind once, which I guess is indicative of the fact that if you are careful about things and do not rush into them the whole picture might change—that is at least the administration's position-and what was called a good idea a week or two ago is not a good idea today for some reason.

Be that as it may, it seems to me that there is no basis now to rush hurriedly into a situation. It is pointed out, and it is quite true, that one of the benefits in this bill is that it alters and simplifies the standard deduction provisions in the

Those authorizations not only provide tax reform and tax simplification, but some degree of tax relief for low income taxpayers, who need it the most.

But there is no reason on earth why, a week after this year's tax returns were filed, we have to rush through a tax reform proposal in a week or so, without having the benefit of administration testimony and expert advice as to what a tax stimulus proposal should be and what it should do.

Let us have an effective program to get unemployed people back to work. Let us address ourselves to the real problems that exist. If it turns out that the real problem is structural unemployment, let us zero in on structural unemployment and solve that. If it turns out that the problem is cyclical unemployment, let us zero in on the problem of cyclical unemployment. If we can benefit the economy by increasing demand, by providing some form of tax relief to consumers, to the taxpayers, the ordinary taxpayers, let us do that. If accelerated depreciation is called for in order to induce business to locate plants and to acquire equipment in areas of high unemployment, let us do that, but let us have a sound approach. Let us have a reasoned approach, and let us not simply move down the field, following the administration's patterns in O. J. Simpson fashion, hoping that we can stay abreast of the latest change handed down from on high.

We are in the business, here, of exercising our own judgment. We are in the business of showing a degree of compassion for people who are now not at work, not employed, but who want to be. Let us go about the business of using our heads in solving this problem of unemployment or at least making the situation better, rather than going off halfcocked in an abbreviated, truncated, scotch tape operation as we have before us right now.

I yield the floor back to the Senator from Nebraska.

Mr. BENTSEN. Mr. President-The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Texas?

Mr. CURTIS. I yield to the Senator from Texas such time as he desires.

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. BENTSEN. Mr. President, the question has been raised as to why we should rush the passage of this tax bill. Actually, I think that is not what we are doing. After all, we have been at this project now for some time.

But one of the reasons why we ought to enact the measure now is that we have changed the standard deduction, and the change in withholding would have to start on June 1 even if we pass it now. If we think there is some longterm stimulus needed, and some cut in income taxes that should be brought about, now is the time to do it. To pass this tax law with the increase in the standard deduction would mean that 75 percent of the people would be able to utilize it. Ninety-six percent of the people would be able to use the tax table to compute taxes. That is substantial tax reform and would be of substantial help to most taxpavers.

One of the other matters of concern to a great many of us is the problem of manufacturing capacity in this country. Compared to other industrialized nations today we are using a small amount of our gross national product for replacing and modernizing manufacturing equipment and increasing manufacturing capacity. The country that is next to us in this respect is England, and we know what kind of problems they are having in being competitive in world

There are some who say that because consumer spending is up, automatically investment will step up on the part of the business community. But the problem we run into there is that the return on investment capital on the part of

business today, as compared to what it was 10 years ago, is substantially less, and business has been discouraged from putting money back into modernization of its manufacturing capacity. The increase in the investment tax credit would help them to do that.

That would take care of the capital intensive companies. On the other side, we have an employment tax credit which would help the labor intensive companies and encourage the hiring of people. That, again, is a part of this tax package, and one that has been worked out, been debated before the House committee, and been debated before our own committee on the Senate side.

We have seen examples of Congress sitting on tax bills. We recall the situation when President Johnson sent a surtax bill to Congress, and Congress sat on it almost 2 years. During that time economic conditions changed, and then Congress finally enacted and passed the surtax at exactly the wrong time, and shortly thereafter had to repeal it.

In this situation today, we have seen a President who has had the courage to change his position when the indicators changed, when economic conditions changed. The easiest thing of all is to hold to a position once stated, never admitting that conditions have changed. But this President recognized those changes. This was not something that was done in 24 hours, in the twinkling of an eye. All of us have been hearing the reports coming out of the White House, the debates among the top advisers as to which way it should go, the fact that the indicators were changing, and whether they should change their position. Finally that decision was made, but only after persuasive arguments had been made and new information came in showing that consumer spending was substantially up.

It is interesting to me that one of the points that has not been made and should be made in this debate is the fact that when we were talking about a \$68 billion deficit in this fiscal year, there was a great deal of wringing of hands.

Now we are talking about cutting that deficit by \$10 billion, to something more akin to \$58 billion because the rebate is withdrawn. The testimony before the Finance Committee today by the Treasury Department indicates that we have reduced spending in the amount of \$7 billion, and increased revenues and taxes by about \$3 billion, for a total deficit reduction of \$20 billion. Now instead of talking about a \$68 billion deficit, we are talking about a \$48 billion deficit, if Congress just does not take it on itself to try to spend all of this \$10 billion to \$11 billion from the tax rebate.

But it is important that Congress be concerned about inflation and unemployment, face up to this issue, and act now; and that is what this package does.

What have most of the economists that have been testifying before us on the Joint Economic Committee been talking about? Most of them have been talking about increased consumer spending.

We can see what our results will be by fall as to any further implementation in the way of possible tax changes; but I certainly support the President on his changed position on the tax rebate. I do feel, though, that we are going to have to keep the investment tax credit and the employment tax credit as the Finance Committee has reported this morning.

Mr. DANFORTH, Mr. President, will the Senator from Texas yield for some

questions?

Mr. BENTSEN. I do not have the time. Mr. CURTIS. I yield to the Senator from Missouri for that purpose, briefly. Mr. BENTSEN, And I yield for that

purpose.

Mr. DANFORTH, I thank the Senators. I have several questions of the Senator from Texas.

First, he talked about the delay in effectuating the change in the standard deduction, and the fact that it would mean putting it off a month if we delayed for even a month in passing this bill.

Not only are we talking about months but I am talking about a year or so, to hear testimony from experts so we do not go off half-cocked. Even if the delay were a month, does the Senator know the cost to the taxpayers of putting off the standard deduction change for a month? I do.

Mr. BENTSEN. Approximately \$500 million

Mr. DANFORTH. Actually, about \$300 million, as a matter of fact.

Mr. BENTSEN. We can let our experts argue over that. The Senator got his estimate from his experts and I got mine

from my experts. Mr. DANFORTH. For a taxpayer with an adjusted gross income of \$12,500, the effect would be \$1.60. For a taxpayer with an adjusted gross income of \$8,000, it would be \$8. For a family of four with an adjusted gross income of \$17,500, which is just about the median, it would be \$4 a month. It seems to me that, yes, that is \$4 or \$1.50, or whatever it is, for these individuals, but it is more important that we are thinking about how to get 7 million people back to work and have a sound, sensible, well-thought-out program than to be so concerned about the \$4 or the \$1.50 that we have to rush through this proposal.

Mr. BENTSEN. The Senator seems to be concerned about \$4. The Senator knows that congressional action on this bill started in January when the House began action. We have listened to a great many witnesses which has been very important to us. I do not think by any stretch of the imagination this is something which has been hastily conceived, but one which has been given consideration, one which has been given

a great deal of study.

Mr. DANFORTH. The Senator will concede, will he not, that it is a whole new ball game from what it was a week ago today?

Mr. BENTSEN. No, I will not concede it is a whole nev ball game. The issue of the \$50 rebate was studied and debated substantially on both sides. I happen to be one who was opposed to that rebate. The arguments were well made as to whether we have the \$50 rebate or we do not have the \$50 rebate.

Mr. DANFORTH. In the Finance Com-

mittee, where I am honored to serve with the Senator from Texas, we were debating a total tax stimulus package of which the \$50 rebate was the centerpiece in the administration's proposal. We were debating that within the context of certain economic assumptions which the administration was making and was explaining to us. Now I understand those assumptions have changed, but I do not know what they are.

Mr. BENTSEN. The \$50 rebate was a one-shot proposal, just affecting 1977, as the distinguished Senator knows. The bill itself is a 2-year package with substantially more money involved. The question as to whether or not we would have the \$50 rebate was debated at length in our committee and debated on the House side. The Senator was in a substantial part of

that debate

Mr. DANFORTH. My understanding is that the argument which was presented by the administration in connection with the \$50 rebate is that certain economic assumptions were made, and that a total package had to be presented with the various parts of it integrated with each other. In fact, Charles Schultze testified before the Finance Committee that the rebate was the first segment of this total package, and when it was to phase out other things would phase in. Now, suddenly, we are told that we have a different economic situation and that the major part of the tax stimulus proposal is out the window. We have not debated the reasons for that. We have not heard witnesses for that. In fact, the witnesses we have heard were testifying maybe 2 months ago, arguing for the contrary of what the administration's position is

I am not saying this because I am anxious to attack the administration. I am not. But situations change. Times change. Circumstances change.

All I am saying is if the Senate is going to act, let us find out what the circumstances are now. What is the economic status of America? What are the most current projections for the next year and a half or 2 years? What is the debate going on in the administration and can we be a party to it? The Senator from Texas indicated in his comments that persuasive arguments were made for the change in the rebate idea. I would like to ask, what persuasive arguments were made, who made them, when, where, and to whom? I have not heard any, other than simply a statement that we were going to abandon the rebate.

I agree with the abandonment of the rebate, but if we are going to design a stimulus package, as we are now doing in the Senate, what is the basis for the new design; what are the conditions that we are trying to meet?

Mr. MATSUNAGA. Will the Senator from Texas yield?

Mr. BENTSEN. I yield.

Mr. MATSUNAGA. If the Senator from Missouri will recall, he expressed the view that 7-percent unemployment or anything in excess of 7 percent, as it is now, is excessive unemployment. The bill, as originally introduced and originally intended, was to reduce the unemployment rate; to increase employment. Regardless of the withdrawal of the \$50 rebate, we still have a bill which will provide incentives to big business and small business to hire the unemployed. The original purpose of the bill is still being served by the bill as it now stands.

As we clearly stated in committee, and the Senator, I am sure, will agree, there are too many today who have been unemployed for much too long. A single day earlier that they can be employed is what we shall seek. I believe this is sufficient reason for going ahead with this bill today.

Mr. BENTSEN. In answer to the Senator from Missouri, the \$50 rebate was really to encourage consumer spending. The rebate did not involve the issues of increasing the standard deduction and simplification of the tax forms, which are so terribly important to the American people. The fact that retail sales are up-and everyone who reads a newspaper or who reads any business journal should know that-makes it evident that there is a change in conditions. Consumer spending is up substantially. Those conditions speak for themselves. The numbers and facts speak for themselves. It is on those facts that the administration obviously changed its position.

I do not think there could be anyone any more eloquent who could add any more to the argument than the Senator from Missouri did as he spoke against the \$50 rebate. Now he is in a position of trying to find out how it is justified and trying to get someone else to tell him. I think the Senator from Missouri did an eloquent job in speaking against

the \$50 rebate.

Mr. DANFORTH. As a matter of fact, I did, as the Senator from Texas knows, oppose the \$50 rebate. But I opposed it because I was proposing an alternative which I felt, and which economists who we then had the benefit of consulting with felt, would put more people to work than the rebate would.

I certainly agree with the Senator from Hawaii, that 7-percent unemployment is way too high. The questions, it seems to me, which should be before us are: How do we get these people to work? How do we get the economy moving, and what is going to be the direction of the economy over the next year or the next years if we do nothing?

Now, this bill before us is not exactly doing nothing. It is spending some money and it deserves our serious consideration. But I am concerned that we are trying to put out a fire with a watergun, that we are not considering what the new statistics show and what the new

needs are.

My argument would be, if I were devising a stimulus package to put Americans to work, that what we have to do is address ourselves not only to the immediate upturn in the economy, but what things look like, say, in the year 1978 and what kind of tax proposals we are going to have to have now in order to meet that problem. The administration says that it is going to have tax reform measures before the Senate or before Congress sometime late this year. But, as I think everybody knows, it is going to be a long time before they are written into law. What kind of tax program are we going to have to start enacting now in order to solve the unemployment problem and the sluggishness of the economy as it is going to exist for the rest of 1977 and 1978?

I point out that Chase Econometrics projects that if there is no stimulus, the gross national product increases for the four quarters of 1978 will be 2.2 percent, 1.9 percent, 1.6 percent, and 1.1 percentan average increase of 1.7 percent. I think we are going to have serious problems and we are going to continue with the sluggishness of the economy unless we start addressing ourselves in a serious way to doing something about it.

What I am concerned about now is that we have sort of washed our hands of the unemployment problem so we can get on with the business of energy, which we all know is very important. But I think employment is important, also.

I ask Mr. CURTIS. Mr. President, unanimous consent that the following staff members may remain on the floor during the debate, voting, and consideration of the pending tax proposal:

Linda Goold, of Senator Hansen's

Claude Alexander, and Steve Kittrell, of Senator Dole's staff;

John Colvin, of Senator Packwoop's staff:

Bruce Thompson, of Senator Roth's

Al Drischler, of Senator Laxalt's staff; and

Allen Moore, of Senator Danforth's

The PRESIDING OFFICER (Mr. Sas-SER). Without objection, it is so ordered.

Mr. BENTSEN. Will the Senator yield for a similar unanimous consent request with regard to David Allen and Jack Albertine, that they may have the privilege of the floor during consideration of this

Mr. CURTIS. Yes, I yield. The PRESIDING OFFICER. Without

objection, it is so ordered.

Mr. CURTIS. Mr. President, I wish to comment about the various sections which we have included in the tax stimulus package presently before the Senate. The tax bill may be divided into several provisions which include the increase in the standard deduction, the increase in the investment tax credit, and a new jobs credit, and the extensions of 1977 individual and corporate tax reductions through 1978. This bill also provides for the postponement of certain provisions of the Tax Reform Act of 1976, which relate to sick pay, tax treatment of income earned abroad by U.S. citizens, and relief from interest and penalty attributable thereto. In addition, there are other provisions which relate to deductions for expenses attributable to use of residence for day care services, legislators travel expenses away from home, amortization of certain expenditures for child care facilities, and increased authorization for the work incentive program.

Under the present law, the standard deduction is 16 percent of adjusted gross income, but not less than \$1,700 for single persons and \$2,100 for joint returns nor more than a maximum \$2,400 for single persons or \$2,800 for joint returns. These levels were established in the Tax Reform Act of 1976.

The Finance Committee established a new flat standard deduction of \$2,200 for single persons and \$3,200 for married couples filing joint reutrns. The committee also provided that an individual entitled to file as a head of household would be allowed to claim the standard deduction of \$3,200, just as a married couple filing a joint return. The committee felt that the present law did not adequately recognize the economic status of heads of household who are generally low- or middle-income widows or divorced mothers with young children.

In providing for the increase in the standard deduction, the new levels of standard deduction will equal or exceed itemized deductions on approximately 7.3 million more returns so that it will no longer be worthwhile for taxpayers to itemize their deductions on those returns. As a result the percentage of taxpayers who itemize their deductions will decrease from 31 to 23 percent. By incorporating the flat standard deduction in a zero rate bracket in the tax tables and rate schedules, the bill eliminates the need for the separate concept of the standard deduction in the Internal Revenue Code and the subtraction of the standard deduction in computing tax liabilities. In this way the change facilitates additional simplifying modifications in the tax law and the tax forms.

It is noted that, although the increase in the standard deduction will reduce the percentage of taxpayers who itemize from 31 to 23 percent, 69 percent of taxpayers who file their returns will receive the benefits of this increase in the standard deduction-a windfall-even though they do not presently itemize the deductions at this higher level. The revenue loss from the increase in the standard deduction will be \$2 billion in fiscal year 1977 and \$7.6 billion in fiscal year 1978.

We also dealt with the increased investment tax credit and new jobs credit. With respect to the investment credit increase, taxpayers may make an election with respect to the new jobs tax credit or an additional 2 percentage points in the investment credit. Generally, the choice of the investment credit will increase it from 10 to 12 percentor from 11 or 111/2 percent to 13 or 131/2 percent, respectively, where the election for an ESOP also has been m..de. ESOP means the employees stock ownership plan, which is now the law as presented and which Congress enacted into law at the urging of the distinguished chairman of our committee (Mr. Long).

The 2 additional precentage points of the investment credit will be available for the portion of the basis of property completed by the taxpayer after December 31, 1976, that is attributable to construction, reconstruction or erection after December 31, 1976, and before January 1, 1979. Property that is acquired by the taxpayer after December 31, 1976, and is placed in service between that date and Januray 1, 1979, also is eligible for the two additional points. In addition, the election for the increase in the investment credit applies to qualified progress

expenditures made between December 31, 1976, and January 1, 1979, for property that is eligible for the investment credit. Regardless of whether they elect the new jobs credit for 1977 and 1978, all taxpayers will receive the additional investment credit for similar activities undertaken after December 31, 1978, and before January 1, 1981.

The committee intends that the additional investment credit be available to public utilities with respect to flow through of the investment credit under the elections made after enactment of the Tax Reduction Act of 1975. Under present law, the credit is not allowed to a public utility where it is required to flow through the credit immediately through a reduction in the cost of service or the rate base. The credit is allowed where the credit is flowed through ratably over the useful life of the asset, where the rate base reduction is restored over the useful life of the asset, or where the utility has elected (sec. 46(f)(3)) immediate flow through.

Corporations that are members of a controlled group of corporations, as well as other corporations, partnerships and individual taxpayers which are under common control and thus are treated as a single employer for purposes of the new jobs tax credit-see discussion below-will be treated as having claimed the investment credit unless all such taxpayers elect the new jobs tax credit. Thus the decision to take the investment credit by any one taxpayer treated as a single employer with other taxpayers determines the decision for the other taxpavers.

NEW JOBS TAX CREDIT

The committee amendment provides the same general rules for a new jobs tax credit as were in the House bill except that under the amendment the new jobs tax credit: First, equals 25 percent of unemployment insurance wage increases rather than 40 percent as under the House bill; second, no maximum total credit is provided—the House bill limited the credit to \$40,000 per employer or taxpayer; third, a credit is allowed for a year only if total wages for the year are more than 5 percent above total wages for the previous year-the House bill required a 3-percent increase in total wages; fourth, any deduction for wages and salaries is to be reduced by the amount of the credit; and fifth, a limitation is provided for new or rapidly expanding businesses.

The committee amendment provides employers with an income tax credit of 25 percent of additions to the first \$4,200 of wages paid to additional employees in 1977 and 1978. Generally, the maximum credit allowed for adding one new employee is \$1,050-25 percent of \$4,200. There is no maximum total credit for any

employer or taxpayer.

For 1977, the amendment provides that the credit is to be equal to 25 percent of the increase in the employer's 1977 unemployment insurance wages over 103 percent of 1976 unemployment insurance wages. For most employers, "unemployment insurance wages" for 1976 and 1977 are the wages reported by the employer for Federal employment insurance purposes. For 1978, the credit equals 25 percent of the increase in 1978 unemployment insurance wages—up to \$4,200 per employee-over 103 percent of 1977 unemployment insurance wages.

Most employers are covered by the Federal Unemployment Tax Act-FUTA-system, and therefore they will be able to claim the new jobs tax credit on the basis of existing records and without making complex computations. FUTA wages and total wages for 1976 already have been reported on FUTA forms so that, for most employers, the information needed for the 1977 credit can be taken directly from the 1976 and 1977 FUTA returns.

For 1978, most employers will use their 1977 and 1978 FUTA records as the basis for claiming the credit, but they are to use a \$4,200 wage limit for credit purposes instead of the \$6,000 wage limit for

1978 FUTA purposes.

Both the amendment and the House bill require a 3-percent increase over the prior year's unemployment insurance wages for an employer to obtain any credit. The 3-percent rule is designed to allow the credit only where an employer's employment growth exceeds normal increases in employment for the

economy as a whole.

To insure that the new jobs tax credit is based on actual increases in employment rather than artificial increases in unemployment insurance wages-for example, an employer could increase unemployment insurance wages by dividing full-time jobs into part-time or partyear jobs-the credit is not to exceed 25 percent of the increase in total wages unemployment insurance wages without any dollar limit-for the year over 105 percent of total wages for the preceding year. The committee provided the 5percent increment rather than 3 percent as provided in the House bill, because it believed this higher requirement would better insure against increases in total wages due to pay raises; the 5percent increment is closer to projected increases in total salaries and normal employment growth than was the 3percent amount.

The committee did not include in its amendment the provision of the House bill which denied twice the credit for the firing of an employee solely to earn a new jobs tax credit. The committee believes this provision would have been administratively difficult to enforce.

Mr. LONG. Will the Senator yield at

that point?

Mr. CURTIS. I am happy to yield to the Senator.

Mr. LONG. Mr. President, I was a little dismayed to see some press accounts, by writers who I believe are generally accurate, which indicate that when we took out the \$50 tax credit and left the remainder of the committee bill, that the bill might be weighted toward business.

I think it might be well to discuss that just briefly at this point to make a record in this regard.

This \$6 billion simplification that is this bill goes almost entirely to middle or lower taxpayers; is that not correct? Mr. CURTIS. That is correct.

As a matter of fact, it removes about

3.7 million low-income earners from the tax rolls because the inflation has put them up there where they do not belong.

Mr. LONG. In other words, even if we leave out the extension of the tax cuts for individuals and the \$35 tax credit that have been passed in the previous Congress and just look at the new things we are doing in this bill, about \$6 billion or three-quarters of the \$8.5 billion a year in benefits goes to people who use the short form or who use the standard deduction, and those people all have incomes of \$20,000 or less. There will be 3.7 million people who have their income tax reduced by 100 percent, because they are taken off the rolls completely.

Mr. CURTIS. That is correct.

Mr. LONG. If we look at how this bill's benefits break down between corporations and individuals, about 75 percent of the benefit of the bill goes to individuals—and not high bracket payers. They are either middle- or low-income taxpayers who get 75 percent of the new benefits in the bill.

Mr. CURTIS. My distinguished chairman is eminently correct, and it goes

much further than that.

Take the new jobs credit. Who gets the wages? If this tax change causes someone in the future to have a job who does not have a job now, this is a tax proposal for the benefit of those workers. If the investment tax credit causes some business to buy new equipment. they probably will end up having to borrow the money and pay for a long time, but the real benefit goes to the workers who produce the raw materials and manufacture that machine, transport the machine, advertise it, and sell

So it represents a lack of understanding of our economy when we become too rigid in saying that something only benefits this group or that group. We are all part of the economy. If a tax proposal enables people who are idle now to draw wages, it is a tax proposal for their benefit, and that certainly is true of the investment tax credit and the jobs credit.

Mr. LONG. Even in the case of the simplification provision, the big advantage goes to married couples, because it is felt by the Treasury as well as by the committee that they have been penalized too long by discriminating against people by virtue of their marriage.

So looking at the bill as it benefits individuals, the families and the families with children are those who get the best break out of the tax cut for the individuals. Is that not correct?

Mr. CURTIS. That is correct, as the

bill came out of the committee.

Mr. LONG. Furthermore, as to the part that is for labor-intensive employers, it costs about \$1.2 billion for the jobs credit, amounting to a little more than \$1,000 per job. That credit is not there for the benefit of the employer. It is there to help someone get a job who presently is out of work or is on the welfare rolls. Is that not correct?

Mr. CURTIS. That is correct.

The employer still takes his risk that his product may become obsolete, that his competitors may have a better product, that sales are less, and all of that. The only winner is the individual who gets a job, who did not have one before.

Mr. LONG. If this job credit works the way we hope it is going to work, a great deal of the cost of the credit should be offset by savings due to a reduction in the unemployment insurance rolls and by a reduction in the welfare rolls. This credit is something to benefit workers who are out of work and the families of those workers.

Mr. CURTIS. That is correct.

Mr. LONG. Furthermore, even with regard to the part which could be more nearly labeled something to help business, the investment tax credit, I recall that some years ago the Senator from Louisiana was seeking to repeal the investment tax credit, and I was amazed at the protests I received from the areas where I happen to live in the State of Louisiana. The building trades workers asked, what was the matter with RUSSELL Long? They said that this investment tax credit was playing a major roll in the building of new plants, largely petrochemical plants, but also various other expensive, modernistic plants for the future. It was the view of those labor leaders-and I think quite correctlythat this investment tax credit was playing the key role in persuading those companies to expand their plants and facilities, and the credit was putting more of those construction workers into good jobs.

Mr. CURTIS. That is correct.

It cannot be even confined to the benefits that the distinguished chairman has enumerated. For example, the Senator mentioned the reduction in unemployment compensation and in welfare. Not only is there that reduction, but also, if individuals go to work and earn good wages, they become taxpayers. Even if their wages are rather low, they are still taxpayers so far as the social security tax is concerned, which, in our unified budget, counts and helps to solve at least our immediate budgetary problems.

Also, if the investment tax credit is an inducement and a means by which American factories modernize their equipment and become more efficient, they become more competitive in the world market; and if they sell more, they are going to have to make more, so they have to employ more Americans.

Mr. BENTSEN. Mr. President, will the Senator yield?

Mr. CURTIS. I am happy to yield. Mr. LONG. I should like to complete

this point.

There was one item in the President's initial package which was a 4-percent credit against the social security tax. It was felt that this credit was something that would be an unconditional benefit to business, since it would have been a business tax cut that had no strings to it. To get the credit a plant would not have had to put more people to work. It was really suggested as a message to business that the Carter administration wanted to be friendly, favorable, and helpful to business insofar as it honestly and legitimately thought it could be. That proposal was something that might be said to be for business, not something for workers necessarily, but something for the business community.

However, I point out to the Senator that this credit is not in the bill. It was not put in by the House: it was not put in by the Senate Finance Committee. Everything that is in this bill that would help a business has a string to it. In other words, if they want to get the benefit of a job credit, they have to hire more workers. If they want to get the benefit of the investment tax, they have to spend eight times that much money in building new plants and equipment.

So there is no benefit in here to business in an unconditional sense. Anything business gets out of this has to be earned by doing something that would put more

people to work.

Mr. BENTSEN, Mr. President, will the Senator yield?

Mr. CURTIS. I am happy to yield to my distinguished friend from Texas.

Mr. BENTSEN. I say to the Senator from Nebraska that last week I was in Mexico City, at a meeting on trade problems with Mexico. I was told that the price of an LTD Ford was approximately \$15,000.

One of the ways Mexico has reacted to competition is by protection for their local manufacturers. We have some problems of our own with foreign competition, and there is a great temptation to raise trade barriers to that competition. But one of the ways we keep the discipline on business in this country, and one of the ways we keep prices low for the consumer, is by having that kind of competition-forcing modernization. That is what this investment tax credit helps do.

One of my concerns is inflation. I think it is as serious a problem today as unemployment. They are both extremely seri-

If your wife goes to the supermarket today and she sees someone walking down the aisle stamping on the tops of those cans, putting on prices, does she try to get in front of that person or does she try to get behind that person? She tries to get in front of that person, because she knows what is happening. The next price they put on is going to be higher than the last price.

So, with consumer spending up in this country, I think it is important to fight inflation and see that we have modernization of manufacturing capacity, so that we will be competitive, so that we keep prices low for the consumers, and that we take care of our balance of trade problem as was eloquently stated by the Senator from Nebraska.

Mr. CURTIS. I thank my distinguished colleagues for their very helpful contribution.

The committee amendment provides a limitation on the amount of the credit available to new and rapidly expanding businesses. The amendment limits the increase in unemployment insurance wages-taken into account under the credit-to 50 percent of the current year's unemployment insurance wages.

The committee amendment requires that a taxpayer's deduction for an employee's wages or salary be reduced by the dollar amount of the new jobs tax credit for wages and salaries paid in the taxable year. This reduction is applied without regard to the 100-percent-of-tax limitation

The reduction is allocated among members of a controlled group of corporations or entities under common control as is the credit.

In the case of entities, such as partnerships, which pass through the credit but do not pass through deductions as such, the dollar amount of the credit, computed by the partnership prior to any allocation, reduced the deduction for wages and salaries otherwise allowable to the partnership. In addition to partnerships, this rule is applied to subchapter S corporations and estates and trusts. as well as to certain regulated investment companies, real estate investment trusts, and cooperatives.

The committee believes the reduction of wage deductions is necessary to eliminate any situation where the credit would give an employer an incentive to

pay an employee not to work.

The same employees are excluded under the committee amendment as were excluded under the House bill. The amendment excludes employees who are not covered under the FUTA system and who are not farm or railroad employees. Accordingly, the credit is not provided for self-employed persons, for employees of employers who are excluded under the FUTA minimums, and for certain persons in the fishing industry.

The amendment also provides that employees of Governments and tax-exempt organizations do not qualify for the credit regardless of any other provision. In general, these organizations do not pay income tax, and because the credit is not refundable, they could not receive any benefits from it. Furthermore, the employees of many tax-exempt organizations are not now covered by the FUTA system, and they could not easily be brought into the system.

The estimated revenue loss from both tax credits is \$0.9 billion in fiscal year 1977, \$2.4 billion in 1978, and \$2.4 billion in 1979. The increase in the investment credit will reduce revenues by \$0.5 billion in fiscal year 1977, \$1.2 billion in 1978, \$1.6 billion in 1979, \$2.0 billion in 1980 and \$1.3 billion in 1981. The revenue loss from the new jobs tax credit is estimated at \$0.4 billion in fiscal year 1977, \$1.2 billion in 1978 and \$0.8 billion in 1979.

Mr. President, we also dealt with the individual and corporate tax reductions that are about to expire.

EXTENSION OF 1977 INDIVIDUAL AND CORPORATE TAX REDUCTIONS THROUGH 1978

Under present law two individual income tax reductions enacted in the Tax Reduction Act of 1975 and subsequently increased and extended in the Revenue Adjustment Act of 1975 and the Tax Reform Act of 1976 are scheduled to expire at the end of 1977. These two tax reductions are the general tax credit and the earned income credit.

The general nonrefundable tax credit equals the greater of: First, \$35 for each taxpayer, spouse or dependent; or second, 2 percent of the first \$9,000 of taxable in-

come. The earned income credit equals 10 percent of the first \$4,000 of earned income. The credit is reduced by 10 cents for each dollar of earned income or adjusted gross income above \$4,000 which generally will phase out the credit as income rises from \$4,000 to \$8,000. This credit is available only to persons who maintain a household, or a child who is under 19, is a student, or is a disabled adult dependent. This credit is a refundable credit so that it can exceed tax lia-

The committee in extending the general tax credit through 1978 felt that the general tax credit should be reflected in lower withheld taxes through 1978 in the same manner as it had been reflected in withholding rates in 1977. The committee further extended the earned income credit through 1978. To be eligible for the earned income credit a person must "maintain a household" or a child who is under 19, a student or a disabled adult dependent. Maintaining a household was defined to mean providing more than one-half the support for that household, and AFDC and other payments with respect to children are treated as support for those children not provided for by the parents. Although the House bill modified the earned income credit by providing that for purposes of the earned income credit, maintaining a household shall be defined by not taking into account any aid or assistance for any child under any Federal, State or local program, the committee deleted that provision because it provided special treatment to AFDC recipients unavailable to other persons.

The 1-year extension of the general tax credit will create a revenue loss of \$6.8 billion in fiscal year 1978 and \$3.9 billion in fiscal year 1979. The 1-year-extension of the earned income credit will create a revenue loss of \$1.3 billion in fis-

cal year 1979.

As you will recall, the temporary changes in the corporate surtax exemption provided by the 1975 Tax Reduction Act was adopted for two reasons: First, to grant tax relief for small businesses which were not likely to derive substantial benefits from the investment tax credit and second, to provide temporary tax relief to small businesses as part of a program designed to help stimulate the economy and promote economic

recovery.

The committee bill extends the reduction in the normal tax rates and the increase in the surtax exemption through December 31, 1978. Thus the corporate rate structure will continue to be 20 percent on the first \$25,000 of corporate taxable income, 22 percent on the next \$25,-000 and 48 percent on the taxable income above \$50,000. The revenue loss with respect to the corporate income tax reduction will be \$1.0 billion in fiscal year 1978 and \$1.3 billion in fiscal year 1979.

The committee also dealt with certain provisions of the Tax Reform Act of 1976 which call for postponement.

POSTPONEMENT OF CERTAIN PROVISIONS OF THE TAX REFORM ACT OF 1976

In the Tax Reform Act of 1976, the Congess revised the sick pay exclusion to apply only to taxpayers under age 65 who have retired on disability and are permanently and totally disabled. Then change was made applicable to taxable years after December 31, 1975. The committee amended that provision changing the effective date for the revision of the sick pay exclusion so that it will be applicable only to taxable years beginning after December 31, 1976. This amendment has a revenue loss of \$327 million in fiscal year 1977.

In the Tax Reform Act of 1976, the Congress reduced the exclusion for earned income of individuals living and working abroad to \$15,000. Congress provided for three modifications in the computation of the exclusion. First, the act provides that any individual entitled to the earned income exclusion is not to be allowed a foreign tax credit with respect to foreign taxes allocable to the amounts that are excluded from gross income under the earned income exclusion.

Second, the act provides that any additional income derived by individuals beyond the income eligible for the earned income exclusion is subject to U.S. tax at the higher rate brackets which would apply if the excluded earned income were

not so excluded.

Third, the act makes ineligible for the exclusion any income earned abroad which is received outside the country in which earned if one of the purposes of receiving such income outside the country is to avoid tax in that country. It also provided for a \$20,000 exclusion for employees of charitable organizations.

Those changes were made applicable to taxable years beginning after December 31, 1975. The committee amended that provision changing the effective date for the amendments with respect to the exclusion for income earned abroad, making them applicable only to taxable years beginning after December 31, 1976. This amendment will create a revenue loss of \$38 million in fiscal year 1977.

The committee also provided that no additions to tax, either in the form of interest or penalties, for any taxable periods before April 16, 1977-March 16, 1977 for corporations—shall be imposed on any underpayment of tax where the underpayment was created or increased by changes included in the Tax Reform Act of 1976. In addition, similar relief was provided in the case of taxpayers who have underwithheld taxes on remuneration paid before January 1, 1977. where the duty to deduct and withhold increased taxes was the result of the Tax Reform Act of 1976. It is estimated that this amendment will reduce revenues in fiscal year 1977 by \$15 million.

There are some other additional provisions which begin with deductions for expenses attributable to use of residence

to provide day care services.

The committee amendment would provide an exception from the general disallowance rule and the exclusive use test for expanses allocable to the use of any portion of a residence in the trade or business of providing day care services to children, handicapped individuals, and elderly persons. For this purpose, the term "handicapped individual" would mean an individual who is physically or mentally incapable of caring for himself. An "elderly person" would mean a person who had attained age 65.

The deductible business expenses would be limited to the amount by which the gross income from day care services exceeds the allocable portion of the property taxes, mortgage interest, and so forth, which are deductible in any

In addition, a special allocation rule based on time of use would be provided. As under present law, an allocation of expenses would first be made on the basis of the space in the residence used for furnishing the day care service, that is, the expenses attributable to the portion used for day care would be determined on the basis of the floor space for that portion compared to the floor space for the entire residence. Then, amount of expenses allocable to the space used for providing day care services would be allocated between business and personal use on the basis of the special allocation rule. The amount deductible-before application of the overall limitation based on gross incomewould be determined by multiplying the expenses allocable on the basis of space by a fraction, the numerator of which is the total hours of use for providing day care services and the demoninator of which is the total time available for all uses—168 hours for each week during the taxable year. This amendment would apply to taxable years beginning after December 31, 1975.

The revenue loss of this provision would be \$20 million in fiscal year 1977, \$17 million in fiscal year 1978, and \$17

million in fiscal year 1979.

Mr. President, we also dealt with a matter of very much interest on behalf of State legislators, which is legislators travel expenses away from home.

The Tax Reform Act of 1976, provided an election for the tax treatment of State legislators for taxable years beginning before January 1, 1976. Under this election, a State legislator may, for any such taxable year, treat his place of residence within his legislative district as his tax home for purposes of computing the deduction for living expenses. If this election is made, the legislator is treated as having expended for living expenses an amount equal to the sum of the daily amount of per diem generally allowed to employees of the U.S. Government for traveling away from home, multiplied by the number of days during that year that the State legislature was in session. including any day in which the legislature was in recess for a period of 4 or

less consecutive days.
In addition, if the State legislature was in recess for more than 4 consecutive days, a State legislator may count each day in which his physical presence was formally recorded at a meeting of a committee of the State legislature. For this purpose, the rate of per diem to be used is to be at the rate that was in effect during the period for which the

deduction was claimed.
In addition, the total amount of deductions allowable pursuant to this election is not to exceed the amount already claimed under a Federal income tax return filed by a State legislator befor May 21, 1976. For this purpose, amounts shall be considered claimed under a return even though the taxpayer treated his living expenses as an offset against any reimbursement of per diem he received from the State legislature and, therefore, did not actually set forth these expenses as a deduction on his income tax return.

The election is to be made at such time and in such manner as provided under

Treasury regulations.

These limitations apply only with respect to living expenses incurred in connection with the trade or business of being a legislator. The 1976 act did not impose a limitation on living expenses incurred by a legislator in connection with a trade or business other than that of being a legislator. As to other trade or businesses, the ordinary and necessary test of prior law will continue to apply.

The provisions which allow a State legislator to treat his place of residence within his legislative district as his home for purposes of computing the deduction for living expenses only to apply the taxable years beginning on or before December 31, 1975. The committee believes this provision should be extended for a 1-year period during which time the problem can be given further consideration and a permanent rule can be developed. This committee amendment extends the provision adopted by the Tax Reform Act of 1976 for 1 year, or to taxable years beginning before January 1, 1977.

This amendment will result in a revenue loss of \$3 million for fiscal year 1977.

We also dealt with the amortization of

certain expenditures for child care facilities.

The committee recognizes that expansion of the availability of child care is an essential element in broadening job opportunities for mothers. A credit against tax liability has been provided to meet the expenses of a taxpayer for child care. There also is need to make child care facilities available for working parents. Although public funds have been made available to increase the number of child care facilities, the committee believes that it is desirable to encourage private businesses to furnish child care facilities for their employees.

In the absence of this election to take 5-year amortization, an employer may use the provisions available in present law for depreciation of tangible property used in a trade or business. Tangible personal property, such as machinery or equipment, is eligible for accelerated rates of depreciation, such as, double declining balance and sum-of-the-year's digits, and also shortening of the guideline levels by as much as 20 percent under the asset depreciation range, some-

times referred to as ADR.

It is possible to use a combination of accelerated rates and ADR lives to speed up appreciably the recovery of an asset's cost. New buildings and structures—other than residential property—may be depreciated using the 150 percent declining balance method. In addition, the investment credit, which is 10 percent through 1980 and under this bill will be raised to 12 percent from 1977 through 1980, may be taken for machinery and

equipment, but it is not available on buildings and structures.

After reviewing the foregoing considerations, the current economic situation and prospects for the near future, and the extent of participation in the labor force by mothers—both parents and single parents—the committee concluded that it is desirable to continue the availability of this provision and to make available to the taxpayer the choice among several forms of tax incentives.

The committee bill reinstates as of January 1, 1977, the 5-year amortization for certain expenditures for child care facilities without any change from prior law. By making the provision effective from the start of this year, the committee eliminated any discontinuity between the termination of this amortization election on December 31, 1976, and its extension by action of the 95th Congress. As a result, a taxpayer who planned in 1976 to install equipment for a child care facility in 1977 may be able to carry out his plans without losing the opportunity to make the election for 5-year amortization. This provision applies to expenditures made after December 31, 1976, and before January 1, 1982.

It is estimated that the revenue loss of this amendment will be less than \$5 million in each fiscal year, 1977 through 1982.

INCREASED AUTHORIZATION FOR THE WORK INCENTIVE PROGRAM

The work incentive—WIN—program is designed to assist families on welfare become independent through training, placement, and other services. Federal funds pay 90 percent of the cost of the program. The administration has included \$365 million in the 1978 budget for the work incentive program. The committee's amendment to the bill would authorize an additional \$435 million in each of fiscal years 1978 and 1979 for employment and supportive services for welfare recipients, with no requirement for State matching funds.

The WIN program is directed at those who most need help in finding and holding a job—employable recipients of aid to families with dependent children—AFDC. Increasing the level of activity under the WIN program will result in promoting the employment of recipients, thereby increasing their income. It will also help to reduce the welfare caseload and reduce the unemployment rate. For these reasons, the committee believes that the amendment is an important element of the economic stimulus package.

Mr. President, the measure before the Senate deals with a number of very important factors in our economic life. Without the passage of this bill, there will be instances of undue hardship, but it is better described in another way. There will be opportunities to encourage activity in employment that will be missed if we do not pass this legislation. It still does not carry any new tax reductions for individuals.

We have a particular interest in bettering the lives of a particular group, the low and middle income. I think we should take into account the current inflation. Many people are handling more money, and that raises their taxes, but they

have no more real income. If an individual receives a promotion to a new job level and increases his income that way, he has had an increase, and it is understood that he will be taxed at a higher bracket. But if inflation forces people in all walks of life and at all economic levels up to a higher level, it does not indicate that their real income will increase, but they have had to pay more taxes because their cash flow has been greater, and it figures out that they owe more money.

It has been suggested by some that we pass a permanent index to meet this problem. The Senator now speaking is not sure about that. One problem is that we do not know just what the situation will be a few years from now. It could become counterproductive. Sometimes these automatic benefits are enacted, and then Congress is anxious to do something else, and they carry out an addition, and we face the same problem in reverse, by providing for automatic increases in retirement benefits. So I am not sure whether a permanent automatic indexing of our tax laws is the right thing to do or not. It might be.

I am also not in favor of a tax reduction, for increasing the income level through a tax reduction does not always accomplish the purpose. The history of this country has been that every time we grant more opportunities to private enterprise, private enterprise responds. Every time we do that which enables individuals to have more of their own earnings to use, they use it in various ways, more goods are produced, more savings are made available for credit, and in many ways the whole general economy is stimulated. I am convinced that within limits we can at times reduce taxes without increasing the deficit.

In connection with the deficit, it is my hope that the Committee on the Budget will undertake the job and the responsibility of coming in here with recommendations to materially cut expenditures. I am not critical of that committee or any of its members. They have a most difficult job. But somehow they have listened to too many political speeches over a period of years. We have heard these candidates for President go out and say that if we can just adjust the taxes a little bit, raise the taxes on some group, there will be plenty of money to lower everyone's taxes, wipe out the deficit, and pay off the national debt. Of course, that is not true. We have sometimes gone through those motions, and found that what we have done in the name of tax reform has not reformed taxes and it has retarded private enterprise, and we have come in here the next year and repealed what we had done.

But even assuming those efforts were sound and prudent, it would not affect the budget by any material amount. We have a deficit of \$50 billion or \$60 billion, maybe \$70 billion, and if we carried out all of this fine tuning of the tax system we might pick up \$2 billion. I think there is a chance we might do a lot of damage in doing it, but we would not touch the overall deficit problem.

We have a deficit because we have more government than we can pay for, more government than the American people will stand for, and there is no way that we can meet this budget problem by any method other than reducing expenditures. It will have to be done in a big way. If there is a failing business, they cannot save themselves from failure merely by using their pencils. It takes some decisive action.

We are paying out great sums of money that are unnecessary. We are supporting able-bodied people who should not be supported. We are paying the hospital and medical bills of everyone over 65, regardless of their wealth or their income from it. We are paying unemployment compensation regardless of need and entitlement. We have too heavy expenditures because we have too much welfare payment.

I am saying to the Budget Committee that they are putting the Senate through useless activities by thinking that all of this can come about by the fine tuners pushing some levers here and there. The only hope for a balanced budget and bringing expenditures under control is to look at the Government programs and make some decisions to eliminate something.

(Mr. ZORINSKY assumed the Chair

at this point.)

Mr. CURTIS. Many things are desirable but they are not necessary. Many ideas appeal to people and create a demand, but they are not absolutely essential.

Mr. President, I am pleased that about 23 or 24 Senators have joined to cosponsor a proposed constitutional amendment of mine which would compel the Federal Government to balance the budget each year.

Some people might become frightened and say, "If we have such a constitutional amendment how on earth can we jump from a \$50 billion deficit to a bal-

anced budget?"

Well, it would take a little while at best to get a two-thirds vote in both Houses of Congress. Any constitutional amendment has to go to the States and that does take time. But once that constitutional amendment is passed, the Members of Congress would have the necessary discipline placed in the system which would save our Republic.

Who wrote the provisions in our State constitutions against deficit spending? They were brought about through the sad experiencees of the States. Legislators were elected with no restraint on spending or debt. Many States were headed for disaster. Decades ago most of them wrote provisions into their laws against deficit spending. Many of them wrote provisions into their constitutions compelling a balanced budget.

What do we have? Solvent States. They maintain local governments and do the other things that need to be done.

Oh, writers of mystery and fiction have predicted that the American Republic would fall when the people found out they could elect a Congress to vote the people benefits.

Well, there might be some truth to that. It kind of frightens me. But the answer is a constitutional discipline that would require the budget to be balanced.

Mr. President, here is how this constitutional provision would work:

The Congress would be mandated to balance the budget every year. At the end of the fiscal year the President would be called upon to determine whether or not there was a deficit and, if so, how much. If there was a deficit, he would be required to calculate how much of a surtax, what added percentage of tax on corporate and individual income taxes, would be necessary to be imposed the next year to recoup the deficit. The President would not impose a tax. No additional power would be given to him. He would merely perform a ministerial duty of working the arithmetic. The tax would go in automatically under the terms of the Constitution.

The President would have to do all that within 20 days after the end of the

fiscal year.

When this proposal was first devised, the fiscal year ended on July 1. Now it has been changed to October 1. So, 20 days after the first of October the report cards would go out to America. They would say, "The budget has been balanced. The boys have done a good job." Or they would say, "The men in Congress spent too much money. Your taxes are raised by 3 percent," or 5 percent or 20 percent, whatever is necessary to balance the budget.

I believe if Congress is faced with the decision of collecting the taxes or reducing spending, they will reduce spending. Who wants a report to go out on the 20th of October to their State, or a House Member to his district, which says we have spent too much money, everybody will have an 11-percent increase in taxes, 3 percent, or whatever the case might be? It will put into our system the necessary discipline to save this country from economic disaster.

States have followed such a method

and we should do it now.

Now, Mr. President, somebody very properly raises a question, "What will we do if a great national disaster arises?"

This provision provides that on a three-fourths vote of both Houses of the Congress they could suspend the provisions for a year. If it continued, they could vote again the next year.

There are many disasters which affect parts of the Nation, but in a disaster which is affecting us nationwide, they could get the three-fourths vote.

Also, there would be a provision that we could not use our credit except to defend ourselves in time of war. The same requirement for waiving could be used then.

Mr. President, the answer to our deficits is not ridiculing the tax program. Of course, we should always look at the tax program to see where it needs to be improved. We should always carry on a program of tax reforms. Sometimes reform is in favor of the taxpayer and sometimes it is in favor of the Treasury. Its objective should be to do justice. But it is just foolish to talk that you could have such reforms to solve a deficit of \$50 billion or more.

Mr. President, an alarm was sounded over the country when we had a deficit of \$2 billion, \$3 billion, or \$4 billion. Now it is \$50 billion. We do not pay enough attention to what goes on here.

We passed a supplemental appropria-

tion bill which increased expenditures over what the committee recommended by over \$1 billion here in this Chamber.

Not long ago the Committee on Finance brought in a bill with reference to unemployment compensation. We shifted the burden from the unemployment compensation to the General Treasury which in the next 2 years will be another \$1 billion.

Mr. President, we cannot go on expanding and expanding the financial obligations of this country and be carried away by the siren songs that somebody is going to balance the budget in 1978. Unless there is a total turnaround, the deficit will be worse in 1978 or 1981, or whenever these good promises relate.

Mr. President, I have served on the Finance Committee where the obligation is to recommend taxes. It is not pleasant. Every tax bracket is overtaxed.

Talk to an individual of modest income and he says, "I think our group is taxed too much." He is right.

Talk to someone in the middle income brackets, who are leaders, who are doing things, who are providing homes, and they say, "We think our group is overtaxed." They are right. They are overtaxed."

Mr. President, they are overtaxed all the way. Perhaps the wealthy of the country do not need their wealth but we need it. We need to have them put it to work. We need in the wealthy a desire to use their money to create enterprise and provide jobs. So when we improve the tax program for people of all brackets, it is

being done for the public.

Mr. President, there are those who foolishly say that a balanced budget would bring a depression, that we have to spend all this money and have deficits in order to build full employment. I feel sorry for those people of little faith in private enterprise; who have little faith in the basic principle that bills ought to be paid. I just do not believe the universe is so constituted. I think if we embarked on a program of balanced budgets, not just once in a while, if we had a general program of balanced budgets and assured the value of our American dollar, there would be a wave of optimum, enthusiasm, and confidence which would sweep this country that we could not hold back. The activity, the worthwhile endeavor, and the great American dream would become a reality, not once in a while but all the time.

Mr. President, I believe that if the word went out to the world that Uncle Sam was paying his bills, that we were balancing the budget, that we are on a payas-you-go basis, and that the American dollar would remain stable, I believe every country of the world not only would support us financially and turn their business this way, but they would say,

There is a leader in the governments of the world that we can afford to aline ourselves within the ideological battles that take place in the world.

Mr. President, we can talk about this or that little amount of change in the unemployment rate. But as long as we go on increasing Government and failing to reduce the size of Government and go on with our deficits, we have insured our-

selves continued unemployment and depression. The present unemployment and the present depression rests upon the Government of the United States because they have so hampered this great, free-

enterprise system of ours.

Mr. President, oftentimes, instead of attacking the program of spending, we do foolish things in the field of taxation. We want individuals to invest their money so that factories can be built, buildings can be erected, machinery manufactured, and all that sort of thing, because it means jobs. Yet we have changed the tax law in two or three particulars that discourage

that from being done.

In the first place, if they borrow money for an investment, they cannot deduct all of the interest. I talked not long ago to a man who saw a business opportunity, and he said, "Here's a company that can grow, expand, and give people jobs.' He borrowed all the money he could raise, his insurance policy and everything else because he believed in it, and he made a go of it. It is employing thousands of people. He said, if that had happened under the current tax system, he could not have done it, because we would not have permitted him to charge off as a business expense the interest he paid out. That is one of those foolish alleged tax reform proposals that we grab instead of facing the issue of cutting down expenses.

I could go on and cite some other ex-

Mr. President, I hope that this bill can be disposed of before too many days. I have no desire to see it prolonged and delayed so that the time elapsed for it to become effective is damaging. But I want to say, here is a \$21.5 billion bill, and the Senators ought to be on the floor talking about it and thinking about it and asking questions. We should be facing the issue of these enormous Government expenditures and devoting our talents and attention to cutting out some Government programs rather than being off in corners where committees are hatching new programs.

Mr. HANSEN. Mr. President, will the Senator from Nebraska yield for a question or two? I would like to speak in my own right later, but I have some ques-

tions.

Mr. CURTIS. I am happy to yield. Mr. HANSEN. First of all, let me com-

pliment the distinguished senior Senator from Nebraska for the obvious thought that he has given to the remarks he has made. With regard to the economic stimulus, it was surprising to me that the administration, almost overnight, apparently, shifted gears on this issue. As nearly as I can learn, the announcement was made by the White House that certain economic indicators suggested that the economy is moving along rather well and that now, in the opinion of those persons visiting the President, at least, there is no need for further economic stimulus or the sort of stimulus that would have been provided by the tax rebate. Then the White House announced rather summarily that it was abandoning that particular part of the program. But earlier today, the Senator will recall, the senior Senator from North Dakota (Mr. Young) called attention to certain amounts contained in appropriation bills and he asked the question, are not these just as entitled to be regarded as economic stimuli as anything else? I ask my good friend from Nebraska if he recalls what Senator Young said and if he would care to comment on it?

Mr. CURTIS. Yes. I cannot pinpoint the exact programs he is referring to, but he was sounding an alarm that there are bills coming to this floor and pending on this floor that call for expenditures of billions of dollars of borrowed money that can only add to the inflation in the

Mr. President, we should keep in mind that inflation causes unemployment, You do not inflate the economy to give jobs. It works the other way. If inflation is rampant, it takes all the money a family can gather to get the bare necessities of life. It does not take very much of a work force to produce the necessities of life. But when there is no inflation, wage earners and others have something left after buying the necessities of life. They buy carpets and drugs and drapes and skis and bicycles and automobiles and boats and hundreds of other things, and somebody has to make them. We have full employment, and individuals can buy more than the necessities of life. When inflation is so rampant that the pay check goes for those bare necessities of life, there are a lot of people that go out of work.

Mr. HANSEN. I thank my good friend from Nebraska for his astute observations. I think the point needs to be kept in mind that, if we will be honest with ourselves and if we will examine in detail the various bills to which the Appropriations Committee is dedicating its time now, we shall find that those bills include important amounts of transfer payments that really are of very sizeable proportions and which have the same effect of putting into the pockets of people money that will be spent that ought not to escape our notice and attention

I am pleased to join with my good friend from Nebraska in sounding a clarion call that I hope will be heeded, that will be responded to by Senators, in looking at this whole tax proposal. The Senator from Nebraska has mentioned a number of things. There are many, many others that could be examined that need to be looked at before we enact any legislation.

Last year, I was a member of the conference committee between the Senate Committee on Finance and the House Committee on Ways and Means. I recall very vividly the enormity of the task that we faced. We were up against a time limitation, too, and in the closing hours-I do not recall if it was the closing day, but it very well may have been-we passed about 41/2 pages of effective dates that correlated with certain provisions of that tax reform and adjustment law. whatever we called it. Whatever we called it, it was a misnomer. We called it some things that did not appear in the RECORD, I might add, and I heard some of my constituents suggest other appropriate names.

But enough of that. Let me say that we passed 41/2 pages as I recall of effective dates. I dare say that most Senators

were like the Senator from Wyoming. I did not have the faintest idea, in reading those 41/2 pages of effective dates, what date applied to a specific provision in the bill. I have since found out, to my dismay, that we brought about serious problems for a number of people.

The question of sick pay is an example

of that sort of thing.

It was made retroactive to the beginning of last year. I have heard from a number of my constituents who tell about the extreme difficulty in trying to get along in assuming that the law under which they presumed they were operating would at least carry forward through that taxable year, only to find, as they now are, that we changed the rules of the game and that what they thought was the law, indeed, was changed and has been reversed back to January 1, 1976.

I know members of the Finance Committee have been concerned about this. The distinguished Senator from Kansas (Mr. Dole) has tried to get that changed, as have most of us, I think, on the

Finance Committee

But I mention that simply to point out what happens when we try to undertake too big a task too quickly without giving sufficient time to the subject to know what we are talking about or even what we are doing.

Mr. CURTIS. The Senator is correct, but it goes farther than that.

Until the Committee on Budget reattacks the program and starts eliminating programs, reducing programs and cutting down expenses, we are going to continue in that sort of trouble.

We have been dealing with just outside appearances, and I can tell the Senator what was back of all that change

By advancing the date where there is a provision in favor of the taxpayer and pushing back the date in favor of the Treasury, we had a paper day to show us more in compliance with the budget resolution.

Call it finagling, legerdemain, anything one wants to, but that was the origin of that amendment.

Now we have got to come in and undo most of it. Undo most of it, but it goes back to the fact that we seem to be carried away with the idea that some fine tuners, some fixers, can solve all of our budget problems.

Mr. President, I love all the economists. I have nothing evil to say about them. I do not think they are very good fine tuners. I do not think they understand the political system.

They will suggest a course of action and then say that if such and such a thing happens in the future, the course should be reversed, when anybody in the political world knows that will not figure.

So, God bless them, I love them. They are learned men. But I wish that a few of them woud find some jobs elsewhere. and we would bring into Washington on our staffs, on the staffs of the committees, and on the staffs downtown, some tough budget balancers and cost cutters that would face the real problem.

Mr. President, I yield the floor.

Mr. HANSEN. Mr. President, I have a background that may be different from

that of some Senators. The State of Wyoming for many years has had a provision in the law—which may be a constitutional provision—that we have to operate on a balanced budget.

I know that the distinguished Senator from Virginia has long been an advocate of that same policy, that same ethic, insofar as the Federal Government is con-

cerned.

I hope he will not be in a position, as I fear he could well be, when he or his children or his grandchildren look back upon this particular time in the history of this Republic and say that it is too bad that we did not then perceive in 1977 how very right HARRY BYRD was.

Oftentimes we grow too old too quickly and smart enough altogether not quickly

enough.

I say that because I am convinced that the sort of rule that has been advocated by the Senator from Virginia (Mr. Harry F. Byrd, Jr.) for the Republic makes

awfully good sense.

I refer again to the fact that the State of Wyoming, which I had the privilege of serving as Governor for 4 years, operates on a balanced budget. Some of our friends who are not oftentimes alluded to as conservatives in this Chamber on both sides of the aisle seem to be struck with horror, just shocked, that anyone should even talk about a balanced budget in these days.

Whether it is a Republican or a Democratic administration, most Presidents proclaim with great emotion, and some of the public rejoices, that the budget will be balanced. A few Presidents have been courageous enough or shortsighted enough to say that we are going to balance it by next year. It is usually a few years down the road when they really will get the budget balanced, and this is said by Republicans as well as Democrats.

We are always talking about what we are going to do and how we are going to change things around so that before too long we will have the budget balanced.

I happen to have gone into the office of the Governor of Wyoming knowing full well we had to have a balanced budget that year. Not 4 years later, not 2 years later, not 6 years later, but that year. We had to have the money on hand to pay the bills, to meet the appropriations that we expected to make, and when we got all through with the legislative session, the budget balanced.

Surprising though it may be to some of our friends, it has not been all that bad

living in Wyoming.

I note that in recent years, the last two or three, maybe longer than that, Wyoming has had, if not the lowest rate of unemployment among all of the States, at least one of the lowest.

I note that the influx of workers into Wyoming has been rather significant. As a matter of fact, if it were not for the fact that people are moving into Wyoming, there would not have been enough workers there to have filled all of the jobs that today exist in the Equality State. We speak of Wyoming as the Equality State because we were first of all

the States to grant to women the right of suffrage.

At that time, we had the first elected woman Governor in this country. We take pride in the fact that we are referred to as the Equality State. But I believe that that appellation could be cast in an even broader meaning. We have been fair to people. We have been fair to people because basically we have been honest with people.

I spoke about the number of jobs we have and the low rate of unemployment. It is also true that the increase in real earning power has been greater proportionately in Wyoming than in almost any

other State.

We are a right-to-work State. I do have a few friends in the labor movement despite the fact that I signed the right-to-work bill when I was Governor, and I received all sorts of anonymous letters, some signed, and I got all sorts of phone calls at the Governor's mansion saying that my days were numbered. I had heard that before, so I was not too alarmed about that. But all sorts of dire predictions were made about what was going to happen to Wyoming.

We were going to become the Appalachia of the West. People were going to leave. No one would want to work in that State because obviously we would not be paying very good wages. Well, the fact is that wages are very good in Wyoming. There are lots of jobs. The economy is good. Yet, we have to balance our budget.

I hope Congress could heed the admonitions of my good friend the senior Senator from Virginia and talk about some specifics this year, not in 1981 or in 1979 or in 1983, about how they are going to have the budget balanced, but move

toward balancing it now.

We have an opportunity to do that because, with the White House having determined—rather summarily, I would say—that they are not going to push further for this \$50 rebate, we do not have to spend all that money. We do not have to spend it all. We could just let some of the people—precisely, 217 million Americans—keep some of it and let them decide how they would like to spend part of the money they have earned.

We are told that the total tax take, including municipal taxes, county taxes, State taxes, and Federal taxes, now takes from the typical American approximately 40 percent of what he earns. Some economists have said that we are just about high enough. Others say we are too high already. But I find very few who say that we can take even more of the real earnings of the people away from them without seriously jeopardizing the economy and the jobs in this country.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. HANSEN. I am happy to yield.

Mr. GOLDWATER. Mr. President, I have been listening with great interest to the comments of the Senator from Wyoming, directed toward my old and good friend the Senator from Virginia. I just could not resist adding a little to the discussion they have been having by referring to my own State, Arizona, which I do quite often.

We are prevented by our Constitution from borrowing money. The State has never been in debt and never will be in debt so long as that constitutional provision prevails. Likewise, we are a right-to-work State—the second one in the United States. That is a bill on which I worked hard to get passed.

I recall that at the time of the passage of that bill, the labor leaders of Arizona said that we were going downhill, added to the fact that we were not allowed to go to the banks to borrow money or to

float bonds to borrow money.

I remind the Senator from Wyoming—and I do not do this in any way to detract from the greatness of Wyoming, which provides Arizona with quite a bit of water once in a while—

Mr. HANSEN. We are going to shut you

down a little this year, BARRY.

[Laughter.]

Mr. GOLDWATER. I think God did that! I do not think Jimmy Carter or Wyoming had much to do with it.

Arizona is now the fastest growing industrial State in the Nation. It is the second fastest growing State populationwise. It has an average per capita income above our national average. Our unemployment rate is below the national average.

So, instead of having chaos because a government could not borrow money, or having chaos because we have a right-to-work law, I think they are both very strong factors in the fact that people like to live in a State in which, although our taxes are not low, they pay their freight. They pay their own way, and we know what we are doing from day to day.

So I join the Senators on the other side and some on this side in saying that deficit spending in this country has to stop. It is that simple. I do not care what kind of formula the President talks about. I do not care what kind of formula some of our economists dream about. If this Government does not stop spending money it does not have, this country will be insolvent in a few years.

We now have double-digit inflation. The suggestions made by President Carter the other night are laughable on their face because they do not face up to the real problem that confronts us; namely, we are spending money we do not have. We have been doing this ever since 1934, when Lord Keynes convinced the Roosevelt administration that this was the panacea that would end all financial troubles.

We have not been bright enough to understand that the world depression in 1928, which took World War II to end, was started by the same kind of irresponsible spending in Austria, when the Austrian mark was a formidable piece of currency in the world and our dollar was not.

So I wanted not only to comment on the comparison between our two States and the comparison that could be drawn between these two States and the other States in the Nation, but also to thank the Senator from Wyoming for courageously standing up and calling to the attention of this body the foolishness that we are in. It is not funny foolishness; it is deadly.

Mr. HANSEN. Mr. President, I thank my distinguished friend, our esteemed colleague from Arizona, for his observations.

I was a Member of the Senate when BARRY GOLDWATER returned to the Senate. I recall some of the comments that were made by Members of this body and by members of the press. It was not at all uncommon to have people on both sides of the aisle say, "You know, if we had had the benefit of looking ahead a few years to see what took place in this country, what happened, how politicians delivered on promises they made, BARRY GOLDWATER very well might have been elected President-if we had the benefit of knowing what was going to happen."

I say that without any derogation at all of the late President Lyndon Johnson but, rather, because among the great characteristics of BARRY GOLDWATER are his honesty, his forthrightness, and his

candor.

I recall what was said in that campaign in 1964, and I recall some of the TV clips, about petals being picked off flowers, and what was going to happen if BARRY GOLDWATER should be elected President of the United States; and then I watched, first as Governor and later as a Member of this body, what took place.

All I can say is that BARRY GOLDWATER is quite a guy. He is quite a guy because he has called it like he saw it. He never once, so far as I know, deviated from the basic honesty that so characterizes and typifies him, to try to make a point or to try to encourage support from persons who may have supported him if he had not told it like it was. That is rather important. It is important today. It is very easy for us to do those things that we, as politicians, think will please our constituents.

I could cite a number of examples-I will cite one or two: We increased social security benefits. We have done that from time to time for a very good reason, and Senator CURTIS has called attention to it, Senator Harry F. Byrd, Jr., has called attention to it, Senator Gold-WATER has called attention to it, and many Members on both sides of the aisle have called attention to it, and we have done it for one reason basically, and that is we have not balanced the budget. We have not brought spending into balance with taxes and, as a consequence, people find that the benefits that these various programs are supposed to give to them are not as meaningful as they had been led earlier to believe they would be and, as a consequence, we have raised the benefits.

We have not actually taken money out of the till that they had paid in earlier when they were contributing to the social security trust fund. The social security program would not last very long if we were to have most or even a significant number of people in this country thrown out of work. It would not last very long because it is practically a hand-to-mouth operation right today.

If we were not taking money from the people who are working, the productive people of this country, the people with jobs, the people with families, the people who are finding it more difficult every

day to keep their own budgets balanced, if we were not taking money from them we would not have any money to pay the social security recipients except by exacerbating the very problem we seek to address by increasing payments. Everyone knows that. That is nothing new, that is nothing new at all.

The biggest burden we face in this country today is the burden of inflation.

You know, when I was criticizing and voting against, as I did, the pay raise when the junior Senator from Alabama proposed that we have an up-or-down vote on it, his proposal sounded very good to the senior Senator from Wyoming, and I asked him if I might not cosponsor it. I did it for a very good reason: I think the people of Wyoming expected us in Congress to have the courage and honesty to vote up or down on that issue, so I asked him if I could join with him.

Well we did not vote up or down on it. Yet when I talk to people in my State of Wyoming, I think the things that are uppermost in their minds are these: Inflation, the state of the economy, jobs, and national security. On our national security they are willing to make whatever kinds of contribution may be necessary in order to insure that we do not have to use the armaments we are talking about. They are not thinking about trying to cut back, as some people recommend would be wise national policy, thereby encouraging and tempting some country to challenge us militarily. We take the position that the best of all worlds is a world in which the United States of America will have a sufficiently powerful military machine so that we will never have to use it.

One time in Cheyenne, Wyo., at Warren Air Force Base, there were more missiles under the command of one man directly responsible to the President than any other place in the United States. Whether that is true now I do not know, but it was true at one time. It was true when I was Governor.

I do not think there is a single person to whom I have ever talked in Wyoming who wanted to have us use those missiles. I never talked to anybody who said,

Is it not a pity that we cannot use these missiles?

We were all happy and secure and satisfied that the deterrent power of their presence would insure a peaceful world.

I mention that as one of the concerns of Wyoming but also, and of more urgent present importance, is the state of the economy, trying to get a handle on inflation so that the money we have will buy what we might expect it to buy. It is not buying what we expected to be able to buy and, as wages are raised, trying to compensate for the erosive force of inflation, we never really quite keep even. We do not keep even because as wages are raised, as salaries are increased, an individual becomes the temporary custodian of more dollars, but inevitably he gets into a higher bracket and has to pay out more, so that in the long run he cannot really keep even. This is the concern of Wyoming people.

I happen to be one of nine, I think, who voted against the ethics bill and, I suppose. I will have to answer for that in Wyoming. Fortunately, my colleague from Wyoming, Senator Wallop, voted as I did, so I guess I can share the blame, if need be, with him, as to why we did not think the Senate should pass an ethics bill

I could go into all sorts of provisions that were disturbing to me about that bill, but there is no need for me to do that. There was not any great outcry in Wyoming to pass an ethics bill, but I can tell you there was a very well articulated outcry about doing something with respect to inflation, about seeing that we did not further erode the purchasing power of people, that we did not destroy the chance that their youngsters

might have to get a job.

They know in Wyoming, as they know in most parts of the country, that if you really want good job security you had better not plan on taking a temporary job with the Federal Government, believing that that will provide you with job security, because we learned a long, long time ago that that does not work very well. We have learned that there is one good way to have the assurance of a job and, indeed, to have a job and indeed to keep that job, and that is to stabilize this economy and stop inflation. to permit people, where they want to, to return from Government bureaucrats to the people the right to say where people want to spend their money, how they want to invest their money, and what they want to do with their money.

It just could be that there are still some old fogies around who might decide they would like to try to help their kids out a little bit. I know my distinguished colleague from Wyoming and I were concerned about what might happen if the Senate were to pass, as, indeed it did, an ethics bill with some provision in it that would discourage the probability of having people from all walks of life serving in the Congress of the United States. We were concerned with the rising incidence of crime and, specifically, of certain types of crime, which seemed to focus on individuals who, for one reason or another, others may believe have a little bit more than

average wealth.

Yet I happen to think that it is in the best interest, it is in the best tradition, of the United States that we see that people from the business community are represented here, that we have people ready, willing, and able to defend the system of private enterprise which has encouraged people to do whatever they wanted to do so long as it was legal, and to exercise for themselves the freedom that is guaranteed by our Constitution to decide what they are going to do with their lives. I think it is important that we have those kinds of people in the Congress of the United States.

Under the provisions of the ethics bill, we have said certain things cannot be done, that you cannot earn over \$8,625 if you are a Member of Congress; that if you happen to be in a Senate staff job, you may not pursue outside opportunities. My assistant here is a lawyer, but

on a weekend she cannot prepare a will for her sister or some member of the family because that would be unethical. I think that is a bunch of hogwash. I never heard of such a silly thing. That is one of the reasons I had for voting against that bill and, I suspect, my colleague from Wyoming may have shared as, indeed, I think he does, some of my feelings in that regard.

But if we proceed on this idea that we are going to insulate everybody in this Senate from real life, from life as it is, from the way things are in the outside world, and if we are going to become more and more "kept" citizens, if we are going to represent the States, then I think we can anticipate that further blocks, impediments, will be placed in our way to try to insulate us almost completely from the real world.

Then I suspect, if we want to try to look into the crystal ball to see what is ahead for us, it will not be too hard to do because there are other countries around the world that have gone down that same road, that have turned their backs upon the contribution that individual initiative may make, that have turned their backs upon the obvious facts that one of the mainsprings of human progress has been the incentive for people to try to do a little better and live a little better, and each of us to try to be his own man, to determine what we want to do based upon what interests us and to be constrained only by what is unlawful or illegal. Obvious, we are never going to have a perfect society, and I do not contend that this is one. I do not contend that there are not plenty of things wrong in the United States today. I do say this. Compared to any other system, I challenge anyone in any part of the world to show me a government that has done as well as has the Government of the United States,

I know a good friend of many of us, the former Governor of Massachusetts, the former Secretary of Transportation, the former Ambassador to Italy, the Honorable John Volpe who said his father was a bricklayer, an Italian immigrant, who worked mighty hard to raise a big family. When his son, John, later to become Governor, later to hold many important posts in this country, first started helping him, John was assigned the job of carrying some mud up onto the roof of a building in a hod, and he said he will never forget how his father grasped the legs of that ladder with both hands when his little John started up with the first load of mud on his shoulders. Then he said:

Father steadied that ladder so it would not move or wiggle or anything and he helped me get my foot on the first rung. From there

on I was on my own.

And he said he could not help recalling that dramatic moment in his life many times, later in thinking about his father. Having come to this country, he did not have anything and was not given anything; he was on his own. He was on his own, and his initiative, willingness, desire, and intense drive spurred him to do something and to make a better life for his family. As we all know, one of the members of that family became a very distinguished great American.

I think this kind of life is not dead, is not all over in the United States; I think it still has a place. I think that there are many people who want to come to the United States because, despite the things that are wrong with America, there is not any other country that starts to hold a candle to this country in offering opportunity to people who are willing to work. I want to see them have a chance to work. I want to see that we are honest with them. I want to see that we do our best not to take away from them that portion of what they earn that we have no right to take away from them through inflation. And that is why I think that it is important that we discuss this bill and know what we are doing before we do

You know, we can go on for a long time debating this bill, and I am certain that, if we were to read what is in it and what other people say about it, it would be very enlightening.

I happen to have before me, Mr. President, a part of the Washington Post datelined Sunday, January 23, 1977. The story that I have before me is headlined "Treasury Chief Favors Uniform Lower

Income Tax Rate."

And pictured on page A-3 of the Post is the Honorable W. Michael Blumenthal. Here is another person who was not born in America and who has distinguished himself and who now occupies a very important post in the present administration. And let us see what he was reported to have said back in the January 23 issue of the Washington Post.

The first statement reads:

Treasury Secretary W. Michael Blumenthal said he favors changing the tax system so that all income, including capital gains, would be taxed at a uniform lower rate. "At this point I am just philosophizing," he says, but we should allow individuals and businesses to keep more of what they make.'

Mr. President, I could not agree with him more. I agree with him because therein lies the key to jobs, job security, and a stable economy in the United States.

You know, when the late President John F. Kennedy proposed a permanent tax reduction there were all sorts of predictions made by Treasury, and others, that we would increase the national deficit. There were predictions that within a 6-year period of time we would have an \$89 billion greater outflow as a consequence of that tax reduction than there would be income in to replace it. What were the facts? The facts were that, instead of having an \$89 billion deficit, the end of that 6-year period of time, we actually finished the 6-year period with a \$54 billion surplus. How could that be? We lowered taxes. We lowered what the Government was going to take in and yet, instead of having less money, at the end of 6 years we had more money. How could it be explained? I am not sure that I know all the answers. I am not even sure I have heard all the questions. But I could say this: Apparently, we found that, when individuals had the decisionmaking ability to decide what they wanted to do with their money, they acted in typical American fashion and they put it to pretty good use. They made investments, expanded businesses, created new businesses, built homes, repaired their homes, improved their farms, bought new tractors, and they did all sorts of things. As a consequence of these individual decisions that all Americans were making at that time, more people were put to work, new jobs opened up, new opportunities to do something became available to more Americans, and instead of people being taxed consumers, instead of people being on welfare, instead of people eating the taxes that had been paid by others, so to speak, they became taxpayers, and we wound up that period of time, that 6-year period, not \$89 billion worse off than we otherwise would have been, but \$54 billion better off than we had been over what the predictions were had we done nothing in the way of change.

So I think this has to be considered. To me it is pretty compelling evidence that there is merit in reducing taxes, in moving to balanced budgets, in letting people make the kinds of decisions that they are perfectly competent to make.

One of the things, Mr. President, that disturbs me about all the Government planning that we hear of these days is that somehow we seem to presume that the greatest share of the intelligence in the United States is present here on the Potomac. Thank God that is not true. If the country as a whole did not have better sense than many of us around here have, the country would be in even worse shape, to my mind, than it is now. I do not refer specifically to a certain group of people. To the other Members of this body I certainly do not refer, nor to the many people who work very diligently and competently for the Federal Government. But the fact is-and this is the important distinction in my mind-that if Government has the full decisionmaking responsibility, and can make but one choice, and if it happens to be a bad call. a bad judgment, we are in deep trouble. But if we leave it up to all Americans to make the sort of individual choices which they are perfectly capable of making, there may be some who make worse mistakes than any of us would make, but there will be some who will make better calls than we would make, and as a consequence the Republic goes along and we do not have the Nation thrown into a situation where we have decided on a specific course of action that time proves not to have been a good one.

I think that Americans must have the opportunity to make these kinds of judgments. I think that if we are to assure young people a chance to have jobs, this is the way to give them that guarantee of

I think there could be some other changes made. I recall that when I was Governor of Wyoming, I recommended raising the minimum wage. It was 75 cents an hour, and I thought it should go to \$1, and I recommended that it be raised. And it was raised. I know that today the President of the United States has recommended a further increase in the minimum wage from \$2.30 an hour, where it presently is, to \$2.50 an hour, and I am also aware of the fact that a great number of members of labor organizations are greatly disturbed with President Carter, because they think he may have reneged on a campaign promise earlier made that he would recommend a far greater increase in the minimum wage: and second, that he was not reading the signs right when he thought that \$2.50 would be an adequate amount.

I do not know what we should do when we get to talking about minimum wages, but I do know one thing: many economists agree that if we look at structural unemployment in this country today, the young people between the ages of 16 and 24 constitute about one-fourth of the labor force, yet more than half of the people unemployed in the United States today are found in the same age group.

My point is that we need to look at this situation and ask ourselves, why is this true? These are normal young people, with more than the usual amount of vitality and strength we would expect in the labor force. Why is it that they find it tougher to find jobs than does the

average typical wage earner?

I think the answer is easily come by. They are having trouble because they have few merchantable skills. Many of them have not had jobs before. They do not know how to do very much. And whatever else we may think about the typical employer. I think this is generally true: He is not going to hire someone to put on his payroll if he is persuaded that that person cannot make some money for him. If it is going to cost more to hire this young person between the ages of 16 and 24 than that person will be able to produce for him, the chances are that the average employer is not going to have a job for that young man or young woman between the ages of 16 and 24.

I am concerned about young people finding jobs. I know our distinguished colleague the junior Senator from California has spoken about how boys become men. He is quite a student of human nature, and he has told me, as he has told many of us around here, that there are different ways that young men manifest their adulthood. One way, down through history, that has been typical of them is to fight, just like any other young male animal. Another way is to go to work, to become contributors. Historically on the farms of America, in the early days, it was a proud time for a young man, when he could take the lines of a team and hold it and guide it, and work all day with it. That was a moment when he was able first to demonstrate to many of his peers that he was a man.

Mr. ZORINSKY. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. HANSEN. I yield.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that Lou Ashley, a member of my staff, be accorded the privilege of the floor during the consideration of the tax which is before us.

RIEGLE). Without objection, it is so afternoon and was here when the unaniordered.

Mr. ZORINSKY. I thank the Senator. Mr. HANSEN. I am pleased to accommodate my colleague.

Let me say that with the raising of the minimum wage laws, and with the passage of other laws that at one time had real relevance to conditions and situations in this country, we have now made it doubly difficult for young people to find work. There are many types of employment that they could perform very well, that they are by law precluded from doing. My good friend and distinguished colleague from California, I know, has said that there was a time when entrepreneurs, capital and management, could exploit labor.

But I think, as he has pointed outand I do not try to quote him preciselythat those times are no longer with us, because with unemployment benefits, with welfare, and with all of the other programs we have, a person cannot be exploited because there is literally no way you can bring about conditions that will result in his being hungry or actually suffering deprivation of the necessities of life in sufficient degree to make him accept the kind of job that you

might offer him.

What I am trying to say, Mr. President, is that it seems too bad to me that we cannot take a second look at some of our laws, and recognize that there are lots of young people in America today who would like to do something, who would like to demonstrate their adulthood by taking a job, by contributing, first to their own upkeep and second, to their families, by working; but instead of giving them that opportunity, we almost inevitably, or all too often, force them to demonstrate their adulthood by seeing if they can drag race through the streets of lots of towns in America at 2 o'clock in the morning, getting drunk, using dope, and getting into all kinds of trouble. I do not know that we would do away with all of that if we were to change many of these laws, but I do say that the incentive, the desire, the drive to try to demonstrate their adulthood could be channeled in other more productive and rational ways. So I would hope we would look at that, too.

If we were to do that, Mr. President, it seems to me we would be giving young people a chance to take their role in society, to get jobs, to reduce the unemployment, to become taxpayers instead of tax consumers, and to expand the output of the factories and firms of America. all to the great benefit of this Nation.

Mr. President, I would hope that Senators will consider some of the points that have been mentioned here earlier this afternoon.

It seems to me that we need to know what we are talking about. There are many changes that ought to be considered, changes which ought to be examined. We should take time to know what we are doing before we try to do it.

I yield the floor.

Mr. KENNEDY. Mr. President, I was The PRESIDING OFFICER (Mr. in the Chamber during the course of the

mous-consent request was made with regard to striking certain provisions on the tax rebate in the bill which is before

I have also had the opportunity to review again in detail the statement of the President last week on April 14, when he made his comments on the general economic situation in the country.

I refer to the second paragraph in President Carter's remarks, where he

said:

The recent improvements in all the economic indicators, the recent reduction in unemployment, the recent decrease in the inflationary indicators, and the prospective impact of the new energy proposals, all have convinced me, the leaders of Congress, our economic advisers, that we do not need to proceed in the Congress with the \$50 tax rebate, nor with the optional business tax

Those were the President's words. He further indicated, later in his remarks,

The announcement that I have made this afternoon has been supported by the Democratic leadership in the Senate, and we have also got the same expressions of approval from the House.

Mr. BUMPERS. Will the Senator vield?

Mr. KENNEDY. I yield without losing my right to the floor.

MOTION TO RECOMMIT H.R. 3477

Mr. BUMPERS. Mr. President, I send to the desk a motion and ask for its immediate consideration.

The PRESIDING OFFICER. Does the Senator from Massachusetts yield for that purpose?

Mr. KENNEDY, I yield.

The PRESIDING OFFICER. The clerk will state the motion.

The assistant legislative clerk read as follows:

The Senator from Arkansas (Mr. Bumpers) for himself and Mr. KENNEDY, moves that H.R. 3477 be recommitted to the Committee on Finance with instructions to report forthwith, with the House proposal for section 302 and the Senate committee substitute for section 302 stricken.

Mr. BUMPERS and Mr. HANSEN addressed the Chair.

Mr. BUMPERS. Mr. President, this is a motion to recommit this bill to the committee with instructions to delete that part of the bill which deals with the investment tax credit and the socalled new jobs tax credit.

The distinguished floor manager this afternoon asked unanimous consent on this floor that title I of the bill, the tax rebate provision, be deleted. I raised the question at that time with the floor manager as to why we were opting to grant the President's request to delete the \$50 rebate and not granting the balance of his request to save the Treasury an additional \$2.4 billion in the investment tax credit by deleting the investment tax credit and the new jobs tax credit from the bill.

I take it that there is just a simple feeling that the President was right on one part and wrong on the other.

Most people in this body know that I

opposed President Ford's tax rebate in 1975. I made certain statements that I believed it was not a viable, economic stimulus. Unfortunately, 52 people did not agree with me. Only 40 did. That tax rebate was enacted. If I may indulge myself in a self-serving statement, in my opinion the rebate did just about what I thought it would do; namely, nothing.

This time I decided, with considerable reservations, to oppose a President of my own party on the same principle, on the same argument, that if you want to provide a rebate to the people of this country who are disabled, people on social security, SSI payments, and so on, to assist them in paying utility bills that they incurred in this most recent harshest of all winters, I would go for it, and I would vote for it happily. But an \$11.4 billion or, under the Senate version, \$10.4 billion, rebate indiscriminately given to 200 million people with no real consideration as to who needed it and who did not I thought was misdirected.

I talked with the President and explained my position to him because I wanted him to know that I am anxious to support him in every way I can, and, certainly, in most areas will defer to his judgment and his efforts to get the economy moving.

In that conversation with the President I urged him to delay a final decision on the rebate until new indicators came out and that if on May 1, for example, he felt that the economy was still not moving strongly enough, then, of course, by all means, to stick with whatever he thought was best.

The President acted courageously, and I believe he was patently correct in his decision to delete the \$50 rebate. He did it because his economic advisors said the economy is indeed moving and this money is not now needed as it was back in December when the plan was formulated.

But the President did not stop with that. In his statement, he accorded equal treatment to both the rebate, the investment tax credit increase, and the new jobs credit, which originated in the House Ways and Means Committee.

My personal feeling about it is this: Not only did I oppose the rebate with considerable reservation, but if that had gone to an up or down vote in this body and this body had chosen to delete the rebate, which I believe it would have done, I would have followed that with an amendment precisely on all fours with the motion I am now offering.

I think it is a breach of faith with the American people to say to them in these very troublesome economic times, "We are not going to give you \$50, but we are going to give"—and I use the word advisedly—"big business another 2 percent increase in the investment tax credit or, alternatively, if they choose, this jobs incentive thing, which is based on some kind of an incrementalization formula that almost defies analysis."

Certainly, if our old friend Larry Woodworth, who is now in Treasury, is to be believed, he has told the Senate Finance Committee that he could not find any rational basis for believing that that so-called jobs incentive provision would in fact provide a single job.

I have an immense respect for him, and I know the distinguished floor manager has, too.

Right now, the best estimates are that plant capacity in this country is moving at about 83 percent. We all know that plants expand for one reason, and that is demand. It is only when demand exceeds production that industry expands.

If industry in this country is indeedoperating at only 80 to 83 percent of
capacity—and there are notable exceptions or isolated instances where some
particular industry is on fire and needs
to expand—there is no indication in the
economy that the business interests in
this country are about to expand at this
point.

Mr. LONG. Will the Senator yield at this point?

Mr. BUMPERS. I will yield only for a question.

Mr. LONG. The point I have in mind—and I would like to ask the Senator if he is aware of this—is that we had witnesses from the small business community who testified that they would employ more people in their businesses if Congress enacts the jobs credit.

I ask the Senator if he is aware of the fact that those people actually took a poll of their members. With regard to those businessmen they polled in Louisiana, people who are members of their Small Business Association, I received literally hundreds of postcards stating the number of people those small businesses would employ. They averaged about two for each of those small businesses.

I proceeded to have a member of my staff take a sample number of those cards and actually call them by long distance to discuss with the managers of those small businesses how firm their estimates were. It looks very much to us as though that estimate is correct, that they had every reason to think there will be a tremendous number of jobs provided if that tax credit—as proposed by the House, at least—to assist small businesses goes into effect.

Has the Senator made any effort to determine from small businesses the extent to which they might take advantage of that provision in his State?

Mr. BUMPERS. If the Senator will allow me, I shall come back to try to answer the question, not based on a sampling I have taken of small businesses in my State, but, for example, let us take the investment tax credit.

In 1975, 71 percent of America's smallest businesses got about 1.7 percent of their after-tax profits from the investment tax credit, while the top one-tenth of 1 percent of the businesses in this country-that is, those over \$250 million-got about 5 percent of their afterprofits from the investment tax credit. Simultaneously, on the actual amount in tax dollars saved in 1975 by business, the top one-tenth of 1 percent got 65 percent of all the tax dollars that inured to the benefit of business from this provision in this country, while that same small-business sector of 71 percent got 2.9 percent of those dollars.

Nobody in this body wants to take issue with any positions that small business people want to take. I am not one that is prone to do that. I got one of the awards as being 1 of the top 10 Senators in the U.S. Senate last year for voting the way the National Federation of Independent Businessmen wanted me to vote. I do not like those polls, except for some that I am high on when they give me an award, but I am saying nobody can be friendly to small business to a greater extent than I have been.

I do not want to take issue with small business people. I simply want to point out that not only do they not get very much of the investment tax credit—and I am for the investment tax credit and am not trying to make an argument against it—but I am saying that the way this jobs credit provision is written, a business, as I understand it—the distinguished floor manager may correct me on this—must exceed 105 percent of its historic employment base before it becomes eligible.

That means, for example, that if General Motors in, we shall say, May of this year, has a big upsurge in its sales and must employ a large number of people because May of last year happened to be a rather depressed month, General Motors is going to get a substantial credit under this. American Motors, which is sliding in the other direction and which could certainly use this kind of help, will never get any of it.

Mr. LONG. Is the Senator aware of the fact that the way the committee amendment is written, a company would make the decision whether it wants to claim the advantage of the 2-percent investment tax credit or whether it wants to claim the advantage of the jobs credit? I should think, and I believe he will find this to be the case, that both the corporations he mentioned would be claiming the investment tax credit. It is our impression that it is largely the small businesses who are interested in the jobs credit and that there is where almost all the benefit of that proposal would go.

Has the Senator any information to indicate that any major corporation is planning to use the jobs credit rather than the investment tax credit?

Mr. BUMPERS. I recognize that industry has an alternative. It can select the investment tax credit. For the purposes of this hypothetical argument, I think we ought to assume that they are not investing in a manner that they are going to take advantage of the increased investment tax credit, but they are looking seriously at the jobs credit. Obviously, they are not going to use this unless it exceeds the investment tax credit.

Am I correct in that?

Mr. LONG. My understanding is that most of the major businesses—and their positions. I think, were reflected pretty well by the Secretary of the Treasury—have no interest, really, in this jobs credit, because they are far more interested in the investment tax credit. If offered the option, almost all the major corporations are going to take the investment tax credit option. But the small businesses, which are not capital-inten-

sive, are very much interested in the jobs credit. It is my impression-and I have no reason to think any differently from the evidence that has been presented so far—that the jobs credit would be liked very much by the small business people. We have had tremendous indications of support from the small business community.

Mr. BUMPERS. If the Senator will permit me, I would like to read from a statement by the Honorable Lawrence Woodworth, Assistant Secretary of the Treasury for Tax Policy, which he made before the Senate Select Committee on Small Business, and I know the Senator shares my great respect for Mr. Woodworth. He said:

The employment credit proposed by the President has been criticized because it applies to the entire payroll of a business not just to the increase in either employment or payroll. The theoretical superiority of "incremental" over comprehensive employment subsidies is generally recognized by laymen

and economists.

Why, then, has the Administration not proposed an "incremental" employment subsidy in place of its comprehensive 4 percent of payroll tax credit? The answer is simple. We have been unable to devise an objective and readily administrable procedure for identi-fying employment decisions which would not have been made in the absence of the credit. Any feasible method for "incrementalizing" the employment subsidy must use a historic base, and this invariably excludes large and worthy segments of the labor market while at the same time conferring a substantial proportion of the subsidy on "increased" employment that would have taken place in any

That is a summation of my own personal idea. What we are doing is giving somebody a tax advantage for doing that which he was already about to do.

Mr. LONG. Yet every example that Mr. Woodworth or Mr. Blumenthal or anybody else could give to buttress that argument related to a company that would take the investment tax credit if offered the option. The jobs credit would be the option that would be taken by the small companies, many of them dealing just in services, which get little benefit from the investment tax credit. All those companies have a tremendous interest in employing more people.

I wish the Senator would undertake to take the same kind of poll in his State that was taken in mine and check them out. All our indications are that these people do fully expect to put more people

to work.

I honestly do not think that Mr. Woodworth, when he presented his statement, or Secretary Blumenthal, when he testified before our committee, had the benefit of the same information that I have. I have not the slightest doubt, from talking to small business people myself, that they were going to hire more people if this provision became law.

I really have a strong feeling that this provision is worth trying. I also believe that it will result in a lot of additional

employment in small business.

Mr. BUMPERS. I wish to yield to the Senator from Massachusetts for an observation on the colloquy which just took

Mr. KENNEDY. I thank the Senator. Mr. President, I welcome the opportunity to join the Senator from Arkansas in this proposal for recommitting the bill, with instructions to report it back without the business tax cuts.

I am always interested in listening to my good friend from Louisiana talk about these various provisions. Usually, when we begin talking about tax expenditures, we are always using the example of the small family farmer or the small business person who will get the benefits of the measure in question.

It is interesting, as was said so eloquently by the Senator from Arkansas, to see where the benefits of the investment credit go, which is not exactly to

the small taxpayer.

There is a legitimate question on the merits, if we decide an investment incentive is needed, as to how we should do it. I favored the refundable investment credit, to reach the new businesses, to help rapidly growing businesses, and to help businesses adversely affected by the recent recession in different parts of the country. I think the refundable credit is much fairer and more equitable. But we are not debating that issue at this time.

To make a brief comment on the question raised by the Senator from Louisiana, the interesting fact is that a formula is built into the jobs credit. To qualify. a firm must increase its hiring by 3 percent over the prior year, before it is eli-

gible for the jobs credit.

If we look at figures on average employment growth over the past decade and over the past year, we find that many parts of the Nation do not meet the 3percent cutoff. Our region of the country has experienced the most serious economic recession of any part of the country. In Massachusetts, annual employment growth averaged 1.2 percent over the period 1965 to 1976. There may be a few businesses in Massachusetts that would be able to take advantage of the jobs credit but they are probably very

As a matter of fact, if we talk about the number of States that are above the 3-percent cutoff over the past decade, it is just about half of them, 26 States. There is also the question of complexity. The jobs credit is an extremely complicated tax provision. If small businesses are going to employ more workers, they will probably have to start by hiring lawyers and accountants to try to figure out the complex formula for the credit.

Mr. President, I ask unanimous consent that a table showing average annual employment growth for 1965 to 1976 may be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

*Based on preliminary 1976 data.

Prepared by the staff of the Senate Budget Committee, using the data of the U.S. I partment of Labor, Bureau of Labor Statistics

Employment figures are those for nonagricultural wage and salary workers.

Mr. KENNEDY. Mr. President, there are serious regional implications suggested by the 3-percent cutoff. areas which have had the greatest economic growth would receive the greatest tax advantage. And the areas facing the most serious unemployment problems would receive the least benefits.

Mr. President, in addition, I want to make a brief comment, as a cosponsor of this motion, on two basic and fundamental questions.

First of all, I would emphasis the economic issues which the Senator from Arkansas has cited. The President in his judgment has indicated that neither the rebate nor the business cuts are justified from an economic point of view.

I wonder how we as a body can say to millions of Americans that we took the \$50 rebate out of their pocket here on a Tuesday afternoon, or the \$250 or \$300 if they have a large family, but that we felt business deserves to keep its tax credit.

Our action so far is not right, from an equity point of view. It is not right from an economic point of view. As President Carter has made clear, the right step is to strike both of these proposals—the business cuts as well as the rebate. The business cuts also deserve to be postponed, since they should more properly be part of the President's tax reform message in September on the issue of taxation and new capital formation.

The President has indicated that capital formation is going to be an extremely important issue. It ought to be examined in great detail by the appropriate Senate committees, and we ought to have an opportunity to debate and discuss those particular questions.

A 1976 study by the Library of Congress, for example, has indicated that both the investment credit and accelerated depreciation are very inefficient tax incentives, generating only 35 or 40 cents of new investment for each dollar of revenue loss. I think we can do better than that.

But that is a complex issue. What we are talking about today are two basic questions, whether the continuation of the business tax cuts is justifiable from an economic point of view, and from an equity point of view. For the reasons outlined in the President's message, I do not believe that they are.

I do not see how we can in good conscience say to the 87 million American taxpayers, "Well, we have made a decision that there is no justification for the tax rebate from an economic point of view, so we are taking away your rebate. But we will continue the investment credit."

We have heard no real justification. We have a variety of other measures to stimulate the economy—the public works bill, the countercyclical spending proposal, the public service employment legislation, and other measures that are directed toward bringing unemployment down and increasing the opportunity for jobs.

But it does seem to me that the rebate and the business tax cuts are tied together. They were clearly linked by the President, and they ought to be linked by the Senate. And so I support the motion to send this bill to the committee and return it as prescribed, without the business tax cuts.

May I ask a question of the Senator from Arkansas, is the administration supporting this motion to recommit the bill?

Mr. BUMPERS. The administration

is indeed supporting this motion. I think that is a point that ought to be emphasized.

Mr. LONG. Will the Senator yield for a question?

Mr. KENNEDY. If I can hear the response.

Mr. BUMPERS. I appreciate the Senator's bringing that up because, as I say, they are not only supporting this, I think the President may want to get actively involved in it, as the Treasury Department is now.

But, second, I think this additional point needs to be made on that, and that is that this is not just a populist argument. We are talking economics here.

I would like to point out what the Chase Econometric Survey said. They said that any time the plant utilization in this country is running between 80 and 87 percent, and they estimate it is currently 83 percent, the investment tax credit is far inferior to every other sort of economic stimulus.

I am not here to argue the investment tax credit. I have always felt it is the best tax expenditure we could make as far as the economy is concerned.

But according to Michael Evans, the change in the credit will have absolutely no effect on growth and employment within the next 14 months and will produce but a \$1 billion increase in GNP and no additional employment after 26 months have elapsed.

Albert Ando of the University of Pennsylvania, responsible for much of the work done with the Federal Reserve Bank-University of Pennsylvania econometric model and who generally favors greater tax aid to business, says the Carter investment tax proposal is "insignificant."

I will yield for a question at this point to the distinguished Senator.

Mr. LONG. I ask the Senator, who in the administration has told him the administration is supporting his motion?

Mr. BUMPERS. The Secretary of the Treasury.

Mr. LONG. Mr. Blumenthal? Mr. BUMPERS. That is correct.

Mr. LONG. All right. With regard to the statement the Senator made, the testimony from which he was reading, I take it he is talking about something that was presented before some committee prior to the time the Finance Committee acted, is that correct?

Mr. BUMPERS. Is the Senator referring to Larry Woodworth's testimony?

Mr. LONG. Yes, sir. The statement the Senator was just reading. I take it that is a statement made by Mr. Woodworth before one of the committees.

Mr. BUMPERS. It was made before the Select Committee on Small Business on February 22.

Mr. LONG. Permit me to say this to the Senator: I do not care what the Chase computer said. You push something in here and something comes out down there in these machines, and half the time it is wrong.

So far as my State is concerned, I have the letters and cards from the people who say that they will put these people to work—one person, two people, three people. You can say that you have to hire at least 3 percent more than you did before, but this fellow in the filling station is going to hire two people, and that is a 100-percent increase in his payroll.

In my office, we have called these people. We have telephoned them long distance. I know some of them personally. They say they are going to hire the bodies. I will take that ahead of something that somebody pushes into this machine and, when he brings it out the other end, says it will have no effect.

I have had the opportunity to talk to the employers. Whose word is the Senator going to take?

These computers do not think, even though a lot of people have the misguided impression that they do. A computer simply takes the stuff you push in and cranks out something at the other end. If you push in an assumption that nobody is going to be hired, that is going to come out the other end.

I recall when a Secretary of Defense made the statement to me that, for example, if the Red Chinese came into the Vietnam war, we would need a certain number of people—say, roughly, 325,115 people—to meet the Chinese Army. The previous Secretary of Defense once discussed that with me, and he said that was a basic mistake in the thinking of his successor. He said that, in his judgment, people make a mistake to think that computers can think. All computers can do is to give you something that has been programed to give you.

I would take the word of hundreds of businessmen, who say that they will employ somebody if they get this tax credit, rather than some economic machine at Chase Manhattan Bank, any day in the week.

Mr. BUMPERS. Will the Senator tell me how the question was phrased that he sent to the employers in Louisiana?

Mr. LONG. I will be glad to get that information for the Senator, and I will be glad to bring in the cards and show them to the Senator.

Mr. BUMPERS. Sometimes people misunderstand the question. It is like the story about the preacher asking, "Everybody who wants to go to Heaven, stand up."

Everybody stood up except this little man in the front row.

The preacher said, "You, sir, are you telling us that you don't want to go to heaven when you die?"

"Oh," he said. "When I die, yes. I thought you were getting up a load for right now." [Laughter.]

The point is that he misunderstood. A lot of times when you phrase a question to people, if you ask them, "Would you take advantage of this if you hired more people?" the answer is, "Yes." But if you ask them, "Are you going to hire more people because we'll give you 25 percent of the excess salaries you pay for everybody you hire over 105 percent?" the answer is, "Yes." But it does not indicate that they are going to do anything.

A man is not going to make an economic decision based on that unless there are all kinds of other economic indicators for him to base it on. That is a personal opinion. That is obviously the opinion of the Secretary of the Treasury right now. It was the opinion of the President when he made his announcement the other day. Anything to the contrary, in my opinion, as the distinguished Senator from Massachusetts already said, is a breach of faith with the American people.

Mr. LONG. The Secretary of the Treasury is a good and sincere man—Mr. BUMPERS. We cannot put down everybody who disagrees with us.

Mr. LONG. I believe we have to look at someone's testimony measured against who the person is and what his background is. The former chairman of the board of the Bendix Corp. thinks as a person in that capacity would tend to think. He has been associated with major corporations for some time.

He looked at this tax credit proposal, where you have to hire a certain number of people, and he is not impressed by it. Furthermore, he is very poorly impressed by it because it was being offered as a substitute for his 2 percent investment tax credit, which he thought would put a lot of people to work. So he testified against it and proceeded to make the case as best he could that this would not get anybody any jobs. He is not testifying as the operator of a filling station, to whom this thing would have a great deal of appeal.

A small business organization mails out these cards that say, "How many people do you think you might employ, if any, if this thing became law?" The postcards came back, and I will bring them here tomorrow.

Realizing that that was somewhat indefinite—"How many people do you think you might employ?"—I asked one of my assistants to get on the telephone and start calling these people individually and find out how many people they would employ. I know some of these people by name. The answers that came back impressed me very much, and I will be glad to show them to the Senator tomorrow.

The count we received in my office, when we talked to the bodies individually, talked to these small businessmen, to see what they would say, is extremely encouraging.

The testimony before the Finance Committee—which I notice the Senator from Arkansas did not read from—by this small business organization that testified before us, predicted exactly that kind of response, and we got it from my State. I am impressed because I know the people.

Mr. BENTSEN. Mr. President, unless this is a private debate, may I make a comment?

Mr. BUMPERS. Mr. President, I have the floor. I yield to the Senator from Massachusetts for a comment, and then I will yield to the Senator from Texas for a question.

Mr. KENNEDY. Mr. President, I am interested in the steps taken by the Senator from Louisiana in contacting those small businessmen. Will the Senator inform me whether the survey was on the House bill or on the Bentsen amendment? Those are quite different matters,

as the Senator understands. There were much more favorable provisions for small business in the House bill than in the Senate version. I am interested in whether we are talking about apples or oranges on this.

When was the inquiry made of small businessmen? The House proposal, providing a 40-percent credit with a cap of \$40,000, gives a credit of \$1,680 on the first \$4,200 of wages. That is a good deal more favorable to the small businessperson than the proposal of the Finance Committee, which produces a much smaller credit of only about \$600 per employee. Can the Senator tell us which proposal was involved in his survey of small businesses?

Mr. LONG. I suggest that the Senator look at page 203 of the committee hearing, the greenbacked document, which I assume the Senator has. There is a statement by Milton D. Stewart, president of the National Small Business Association, accompanied by John Lewis, executive vice president and executive director of the Small Business Council.

These men discussed this matter, and they strongly supported the jobs for credit.

It is true that the House proposal would provide a larger advantage to small business in some respects, but the committee amendment which was sponsored by Mr. Bentsen is actually more attractive to business in some respects than is the House bill.

What the Senator wants to do is not to give small business any incentive to employ more workers. If the Senate should retain what has been acted on by the Finance Committee, then when the matter goes to conference, the decision would be between the Senate jobs credit and the House jobs credit. Of course, if the Senator is successful in what he would seek to do, it is entirely possible that the result might be no jobs credit whatever to encourage small business to put more people to work.

Mr. KENNEDY. The point I was raising was as to the inquiries that were made about the House proposal, which is much more targeted toward small business and is much more favorable to small business than the provision of the Senate bill. The House proposal had a cap on the credit of \$40,000, so that only small firms could have used. But that formula was changed in the Senate bill. The cap was removed, so that larger firms could qualify too. But to keep the revenue loss the same, the benefits were cut back substantially for small business.

I listened to the Senator from Louisiana talk about how small businesses are supporting this proposal, and I wonder what question was asked. Was it on the House proposal or on the Bentsen proposal?

Mr. BENTSEN. I would be pleased to answer that question.

Mr. KENNEDY. I thank the Senator. I want to get back to what I think is the most essential aspects of the issue on the motion to recommit—the equity aspect.

I feel that the equity issue is really the heart of this proposal. The arguments in the merits of the job credit and the investment credit are really smokescreens with regard to the central issue we are talking about—is it fair to take the rebate away from the consumer, but to leave the tax relief for business in-

Taking away the \$50 rebate from individuals, \$50 from the American taxpayer, seems to have been an easy step. It was accomplished easily and conveniently this afternoon by unanimous consent. Now we are debating the proposal that will benefit the business community by about \$2.4 billion a year I think is a question of equity, and I strongly support and look forward to further debate on this issue.

Mr. LONG. I will-

Mr. BUMPERS. The Senator from Texas has asked permission to respond to the question of the Senator from Massachusetts, and I yield only for that purpose.

Mr. BENTSEN. This is to respond only. The question was asked whether the National Federation of Independent Business had endorsed, and when they had endorsed this proposal. As late as this morning they called asking me to fight to keep my amendment in the bill, to keep the Bentsen amendment in for small business, and we have done that.

I know the point has been made that you need to hire more than 105 percent of the previous year's base. I think the Senator has misspoken on that or misunderstood. It is 103 percent, and 103 percent is arrived at by the fact that you have a normal increase in employment across the country of 3 percent a year, and that is how the figure was chosen.

In all candor I would like to have it less than that. I would like to have it 96 percent, which would be similar to the original legislation that I introduced, but the matter of revenue loss gets involved there, and we cannot do it.

If you get into New England or you get into Massachusetts, and you look at the service sector, you are seeing a growth in Massachusetts in the service sector in excess of 3 percent, and those are the people who are principally going to be hiring under the employment tax credit.

I notice that the Small Business Association of New England also supports the employment tax credit concept.

A comment was made about Larry Woodworth opposing this. He was talking at that time about the version that came out of the House. The Finance Committee has modified the House jobs credit in several ways to meet the objections of the Treasury Department.

The problem I am concerned with is not just unemployment, but also the problem of inflation.

I just came back from Mexico where we met on some trade problems with the President of Mexico and the Secretary of Commerce, and all, and they were telling me they had to pay \$15,000 for an LTD, for a Ford. One of the reasons is that they are not competitive in world markets. They have built up trade barriers to try to protect local manufacturers. We have the same temptations in this country to build up barriers to protect local manufacturers.

One of the problems you have in this

country is that we have been putting a very small percentage of money back into manufacturing capacity compared to other industrial nations in the world, and the country next to us is England, and you can see what kind of trouble they are in today.

Now, you talk about having 82 percent of our manufacturing capacity utilized today. That really does not give you a true representation because that other 18 percent is the least efficient, the most unproductive; that is the part they put aside first. Business has been dragging its feet on modernizing its manufacturing capacity in this country.

Back in 1973 and 1974 we noticed bottlenecks developing in our economy, in our manufacturing capacity, and there was an immediate increase in inflation.

That is my concern today. When we get above 82 percent capacity, unless we get manufacturers in this country to modernize and increase their manufacturing capacity we are going to see those bottlenecks develop again. Who is going to pay for it? The consumer is going to pay for it by increased inflation, and that is the sort of thing we ought to be fighting to prevent today, and why I strongly support what I think is a really balanced tax package.

This bill increases the standard deduction for a \$6 billion annual revenue loss and also provides about \$2.4 billion on the business side in fiscal 1978.

We talk about what we are going to do this fall about tax reform. These things are not set in concrete once we do them. We know when the Administration comes up with a tax reform bill, whatever it may be, that these things are subject to amendment or to change.

So we are going to be seeing that this fall. But in the meantime I want to see modernization of industry in this country and the hiring of people, particularly in the service sector.

Mr. BUMPERS. Mr. President, if the

Mr. BUMPERS. Mr. President, if the Senator will yield on some of the points he made there, I would like to make this observation on behalf of the President.

He is faced with a dilemma of trying to keep the economy moving as it has been moving in the past 60 days and, at the same time, present this country with an energy bill that will not exacerbate the double-digit inflation we have reached on an annual basis during the last 60 days and, at the same time, not provide under this bill an additional inflationary stimulus.

Now, this morning he obviously dropped the rebate, the investment tax credit, and the new jobs credit, he obviously dropped all of those because he thought the economy was moving rapidly enough. He did not do this just off the top of his head, because he was ideologically opposed to the rebate or any of those things; he did it because he thought the economy was going to move sufficiently without it.

Now he has economic advisers, and he has got a lot of the economic indicators he looked at, and I am sure one of these economic indicators that he saw, before I saw it in the paper this morning, was that housing starts in the month of March—when you consider condomin-

iums and apartments—were started at an annual rate of 2.1 million, the highest percentage increase since 1973, and for single-family dwellings of 1.5 million starts on an annual basis, the highest in the history of the country.

Now, it is notorious that there is not anything that stimulates this economy like the housing industry. I think it is one of the most significant economic signs I have seen, and that article indicated that the housing boom is going to continue.

There is not anything as cruel as inflation to people on fixed incomes, to people on social security and SSI, and other people of low and medium incomes; there is not anything that is as big a robber of their disposable income as is inflation.

So the President has this problem. It is a very serious economic problem for him, and I think we ought to give him a hand with it.

The second point I would like to make is the Senator alluded to the fact that business needs to know from one day to the next what is going to happen. I do not know of any complaint I hear more consistently and more persistently from business than that they never know from one year to the next what is going to happen to them, and it just torpedoes their planning process.

Here we are talking again about a proposal that has a 2-year lifetime. I voted for the 3-percent increase in the investment tax credit for two reasons: One, I think it is the best tax expenditure the Congress can vote to stimulate the economy. I always thought it was, and I still think it is.

I voted for it for the second reason because it had a degree of permanency, and this was what the business people in my State came to me saying, "For God's sake, if you are going to pass it, put it on a permanent basis so it will be something we can depend on."

So I voted for it, and I am glad I voted for it. But now here we are coming back and raising it to 12 percent, and I raise the same question about the investment tax credit that I often raise with the Pentagon, and that is, "How much is enough?"

So I think that the lack of permanency, the obvious inflationary impact it is going to have, plus the fact that I want to cooperate with the President, all of those things tell me that this is a very poor time to do this.

Mr. BENTSEN. Mr. President, will the Senator yield?

Mr. BUMPERS. I yield for a question. Mr. BENTSEN. The point about consumer demand rising in housing is absolutely right, excellent. Homebuilding has moved up, and it is encouraging to all of us, and I am as delighted as the Senator is. But that is not the real problem we are talking about. We are talking about those kinds of pressures leading to more inflation, which is the point I made earlier, that when you go to the supermarket and you see somebody going down one of those aisles and stamping prices on cans where do you, go? Do you get behind that person or get in front of that person? You get in front of him because you know the price he is putting on is going to be a higher price than they had on that can before. That is my concern.

But what you are seeing in an increase in the investment tax credit and adoption of an employment tax credit is not something that contributes to inflation. It is something to try to bring about more productivity; to try to bring about more efficiency; that is to try to make us more competitive in world trade: that is to try to make the dollar sounder. That is a better solution, really, than a public service job. I would rather see a fellow paid for working than for not working, but too often public service jobs are deadend jobs and not productive jobs. But these jobs that we get people into in the service industry are productive jobs and most of those will be by small business. And that is why small business has fought so hard for this concept.

Mr. BUMPERS. A lot of mail came into my office on the pay raise, and there was a substantial amount of it, as soon as the word got out that I was leading the opposition to the \$50 rebate. I received a lot of mail from people who were genuinely concerned because they expected the \$50 rebate. They had inordinate bills. They wanted the money very much because they needed it very badly. It was not an easy position for me to champion. But most of the mail that I received which was hostile about my position invariably said:

How can you people raise your own salaries \$12,000 or \$13,000 and then say to the American people, "We are not even going to give you a paltry \$50?"

It is not an easy question to answer, I might add.

But let me ask the Senator this: How would he answer the same kind of question from 87 million taxpayers and 200 million Americans who were going to get \$50 each when they write to him and say:

You were so happy to cut my rebate of \$50 and yet I see you are more than happy to give big business \$2.4 billion in the same breath even over the objection of the President?

Mr. BENTSEN. I would say to individual taxpayers that we raised the standard deduction for most single persons to a fixed \$2,200. I would say to the married couple that we raised their standard deduction to \$3,200. Those are things we have done. We also extended the \$35 general tax credit. And then talk about inflation. As the Senator so eloquently said, the cruelest tax of all is inflation. What we are trying to do is help small business, and we are trying to help make our manufacturing capacity more competitive in the world so that prices can be lower and we can hold down inflation. That is how I would answer that one.

Mr. BUMPERS. With all due respect to the Senator, to use the show biz term, "I don't believe that would play in Peoria." And I do not think the people to whom that is written would accept it very charitably.

Mr. BENTSEN. I would say, then, I just have to do what I thought was right on that.

Mr. BUMPERS. Let me follow that up,

if I may, and ask the Senator this question: What was the purpose of the increase in the standard deduction and the extension of the earned-income credit? What rationale did the Finance Committee use in providing for those tax cuts. which I support wholeheartedly, I might add?

Mr. BENTSEN. One of the things is it results in substantial simplification. It means that we have 47 million taxpayers who will get tax cuts, and I think it results in less than 2 million who actually have a tax increase. But it resulted in a substantial simplification and a tax cut for a vast majority of the people on a continuing basis.

Mr. BUMPERS. I submit that the primary reason the Finance Committee did that is the same reason I support it. That was it would give more disposable income to the taxpayers of this country.

Mr. BENTSEN. Over a continuous

period of time.

Mr. BUMPERS. Exactly, and create a greater demand which, in turn, would enable industry to reach closer to capac-

ity and hire more people.

Mr. BENTSEN. Over a continuous period of time, and I want to make that point very clear, because what we are seeing right now is we are seeing a great increase in consumer demand and the \$50 rebate would have been for a very short span of time, and that does not appear to be necessary now. I should not have to argue that one to the Senator because he had the same position.

Mr. KENNEDY. Mr. President, will the Senator yield for an observation?

Mr. BUMPERS. I yield to the Senator from Massachusetts.

Mr. KENNEDY. Although I understand the position of the Senator from Texas, I wonder why we always fight the battles of inflation on the backs of the consumer, on the backs of the 87 million taxpayers, and never in terms of the

business community?

Let me ask the Senator from Arkansas a question on the jobs credit. As I understand it, the average cost of a new employee is \$10,000. Under the House formula, a business would receive \$1,680. Under the Senate formula, it would receive only \$600. I can imagine that any business, if it is going to invest \$10,000 for a new worker, would rather have \$600 than nothing. I am wondering, as an experienced businessman himself, whether the Senator feels that the \$600 is really going to mean very much in a firm's decision to hire a new worker? They know that they will be spending \$10,000 a year for the worker. How significant is the fact that the worker comes \$600 cheaper. when they know the worker will still cost them \$9,400? Is not the jobs credit just a windfall for firms that would be hiring workers in any event? Would even the \$1,680 in the House bill make much difference?

Mr. BUMPERS. I fall back on the testimony which I quoted from Assistant Secretary Woodworth a moment ago and with which I agree 100 percent. First, there is absolutely no way to determine that an employee has been hired because of that credit, but in his opinion nobody-and I think he was very dramatic in that he said nobody-is going to hire anybody because of that jobs incentive. I agree with that.

As I pointed out to the Senator from Louisiana a moment ago, I think that these decisions are going to have to be made on the basis of substantially greater and more dramatic economic factors for business than that credit, and some people are going to benefit from it unnecessarily because, as I pointed out a moment ago, General Motors in any given month or 2 or 3 months of the year stands to reap a pretty good harvest if it hires people because of a surge in business that it was going to hire anyway without this credit. They simply take advantage of it. So, that is one of my points, but it is just one of many.

I think the Senator has correctly said that the real heart of this argument is

the equities of the thing.

Mr. BENTSEN. Mr. President, will the Senator yield for about 30 seconds?

Mr. BUMPERS. I yield. Mr. BENTSEN. The Senator keeps referring to 1 or 3 months when General Motors has a surge in employment. I am sure the Senator does not mean to misstate it, but it is a 12-month period of

Mr. BUMPERS. I understand that. But let us assume that General Motors, for example, produces 1 million additional automobiles. I am not sure what these figures are, but I think they are on their way to a banner year already. I might phrase this as a question to the Senator from Texas. Under this bill, if General Motors produces a million more automobiles this year than they did last year, assuming that they raise their employment proportionately and in accordance with their normal production, will they not get a credit under this provision?

Mr. BENTSEN. It is a substantial capital intensive corporation, and any estimates I have seen would lead one to believe that they would take advantage of the investment tax credit rather than the

employment tax credit.

Mr. BUMPERS. On that same point, the Senator from Louisiana alluded earlier to a filling station operator. If he is an independent operator, running a shop all by himself, and he hires one hand he has increased his employment by 100 percent and is entitled to this credit.

But, first, I doubt that any of the inquiries coming out of the Senator's office went to service station operators; and, second, I will be happy to stand in this Chamber next year and admit the error of my ways if he can produce me a service station operator who hired someone because he was going to get this little incentive under this bill.

There are two other points-

Mr. LONG. Mr. President, will the Senator yield at that point? I can produce him a service station operator who would hire two. One I am not sure: two I know

Mr. BUMPERS. As long as it is not a lawyer or an accountant, which all of us have to hire. But I would like to make two other observations here which I think are worthy of note.

There has been a lot of talk in this Chamber today about the importance of helping the President balance the budget. My credentials are in order on this point, because I have submitted a resolution, and I have several cosponsors, that would require the U.S. Government to live within its means except on a vote of both Houses declaring either war or an economic emergency.

We lived within our means when I was Governor of my State, and at times it was painful, but we had no choice, because the State constitution demanded it.

I believe strongly in that concept, and believe there is no concept that the President mentioned during his campaign, in his inaugural speech, or since that he is more dedicated to than balanc-

ing the budget in 1981.

There are two ways to balance the budget: by cutting down on spending and by cutting down on tax giveaways. Here we are, striking the rebate and saving the country either \$10.4 billion or \$11.4 billion, depending on whether you want to use the House or the Senate version. We are moving the President toward his goal by saving the country that amount of money. The reason we are doing that is because he himself has said it will not have the desired effect; it will not have the effect he originally thought it would

I am coming along here now and offering a motion to recommit this measure and save another \$2.4 billion for the same reason the President wanted to do it, first because it would not have any economic stimulating effect, and second because it would help along toward balanc-

ing the budget in 1981.

Finally, I would like to say that the President wants to present a comprehensive tax bill to this body in September. I do not believe we ought to usurp his rights. I know there are those on the other side of the aisle who originally-I do not know whether the plans are still the same-planned to offer a substitute to the tax rebate in the form of a permanent tax cut. I might, under normal circumstances, favor that proposal. I am not really familiar with it; I do not know what form it will take. But I am not going to favor it at this time, and I am not going to vote for it, and I do not think either the floor manager or our distinguished colleague from Texas will support that proposal if it is offered here.

One of the arguments that will be made on this floor in opposition to it, if it is submitted, is that the President ought to have as his prerogative coming up with what he promised the American people during the campaign he was going to come up with; namely, a comprehensive tax reform package. If we are willing to make that argument then, why are we not willing to make that argument now? Why say to the President now, "We are going to permit you to come along with a comprehensive tax package this fall as long as we get all the goodies we want on the front end, now

It does not make much sense.

We are going to have to face up to all the issues that exacerbate inflation. Most of the Members of this body applauded the Presidents' stand on the rebate. I certainly did. I admired his courage in taking it. Certainly he got plenty of hostile mail. But it is a curious thing how we support him when he is taking a benefit away from the bulk of the American people, some of whom really need it.

But, as the Senator from Massachusetts says, we hesitate to support him when he withdraws his request for a tax benefit for big business. These beneficiaries of the jobs credit will be the very same people who are the beneficiaries of the investment tax credit right

So, Mr. President, I hope my colleagues in this body will have an opportunity to study this motion to recommit, the debate that has been had this afternoon, and my reasons for offering it, and that we will be able to get to an up-or-down vote on it not too far in the future.

Mr. President, I suggest the absence of a quorum.

Mr. LONG. Mr. President, will the Senator withhold that? I would like to suggest a substitute for his motion, if I

Mr. BUMPERS. For what purpose is the floor manager asking me to withhold it?

Mr. LONG. I would like to speak to the Senator's motion, if I may, and he can suggest the absence of a quorum after I have made my statement.

The PRESIDING OFFICER (Mr METZENBAUM). The motion has already

Mr. LONG. If the Senator insists on getting a quorum in here, that may take some time. I would just like to make my speech. I am not particularly proud; if he suggests the absence of a quorum, he might get me a few more people to listen, but I am not all that optimistic.

The PRESIDING OFFICER. The motion has been made and is debatable.

Mr. BUMPERS. Mr. President, I have not yielded the floor. I would like, if I may, to engage in a short colloquy while I have the floor with the distinguished Senator from Louisiana. I am certainly not going to try to deprive the Senator of an opportunity to comment on my motion, but I do not want the Senator to move to table my motion.

Mr. LONG. I am not going to move to table the Senator's motion today; not at this time. I would just like to speak to it.

Mr. BUMPERS. In that event, Mr. President, I withdraw my suggestion of the absence of a quorum.

Mr. LONG. Mr. President, I listened with interest to the Senator's plea for party loyalty to the President. The way I construe the Senator's argument, he is a great advocate of party loyalty if the President is doing what the Senator from Arkansas thinks he ought to do. His advocacy and support of the President does not seem to move to the point of supporting the President when he might have some doubt as to what the President might want to do.

It was the Senator from Arkansas who was planning to make the motion to strike the \$50 tax refund when the President was placing his reputation on the line in an all-out effort to save that provision in the bill. I had entertained some doubts about the \$50 tax credit, but I made a statement on nationwide television that I was resolving my doubts in favor of supporting the President on that

Mr. President, the information that I have received from the White House and from the Treasury about this matter went somewhat along this line: First. the President has decided that he wants not to push for the \$50 tax credit, and we went along with the President on that. The President and his administration would also like to pass the simplification part of the bill and certain other provisions that are in this bill, including the extension of the temporary tax cuts that we voted last year.

Mr. President, if we pass those proposals, and I will certainly vote for them as a practical matter, what that means is that to a large extent the President will be privileged to veto almost any revenue bill that comes to his desk for the remainder of the year, with the possible exception of one to extend the debt limit. So if we pass the bill we have before us. we solve practically all the political prob-

lems of a fiscal nature the President would have for this entire fiscal year, if we pass the bill in a form that the President would feel he could sign it.

It would be all right with me to strike those two provisions out of the bill, if that is what the Senate wants to do. But I insist that the Senate has a right to legislate just as much as the House of Representatives has a right to legislate, and Senators have the potential of generating a good idea just as does the Secretary of the Treasury, the Under Secretary of the Treasury, the Assistant Secretary of the Treasury, or even the President of the United States himself.

Mr. President, the argument that was made on this floor by the Senator from Arkansas, quoting Mr. Larry Woodworth, who is a very fine man, whom I hold in the highest esteem, a man I recommended for the job he now holds-was made in the House of Representatives.

It was made not in those precise words, but the argument that the jobs credit, which was initiated by the chairman of the House Ways and Means Committee. and those who serve with him on that committee, would not be effective, that it would not create jobs, was made in the House of Representatives. It was made before the committee over there. It was made to the House Members at a time when you could expect as much party loyalty in the House as there has been at any time since Mr. Carter took office. That argument was made against the House committee amendment which provided this tax credit to help employ people.

The House committee amendment was offered to strike from the bill the 2-percent investment tax credit and the 4percent credit against the social security tax that was recommended by the administration.

How did the House vote when the Secretary of the Treasury got through using all the great power and influence of that magnificent and talented man, and everything else the Treasury could throw into the breach, plus everything else the administration had to work to sustain

its position on that item? Well, by the time they got through making all their arguments that this jobs credit would not create any jobs, they got beat by a vote of 341 to 74. That is a defeat by a 4 to 1 margin in the House of Representatives right at the beginning of the administration of a new President, with the administration doing everything it could to muster the votes. How many could it muster? Seventy-four.

I submit, Mr. President, that the able men in the other body simply did not buy the argument. They heard it. They heard it on the best of authority. They heard from Mr. Blumenthal himself that this jobs credit would not create jobs. They would not buy it. You could not sell it to one Member in five. Mr. Blumenthal had as much influence as you could expect him to ever have, and Mr. Larry Woodworth had as much influence, which is very considerable.

The House thinks this is an idea worth trying. The Senate committee thinks it

is an idea worth trying

It may be that we cught to include a jobs credit as strong as the House bill's credit, and we have that right if we want to. If the Senate wants to keep this Senate provision in the bill, it can amend it to make it a 40 percent credit for jobs, just like the House bill, or even a higher rate, if it is the judgment of the Senate that something along this line should be done. But it will not be the end of the jobs credit, whether the Senate agrees to the committee amendment or even the jobs credit, because the House has voted for it by a 4 to 1 margin. The House will probably insist on some part of this, either all or a substantial part, regardless of what the Senate might do about it.

As I say, Mr. President, I interrogated witnesses. Look at page 316 in the RECORD. Senators will find that chairman of the committee, the Senator from Louisiana, asked the witness for the National Federation of Independent Businesses, the largest small business organization in America, if he would undertake to find from his members in the States represented on the Finance Committee how many of those people thought they would put somebody else to work in

response to the jobs credit.

I ask unanimous consent that there be printed in the RECORD at this point excerpts from pages 316 and 317 discussing that provision with the representative of the National Federation of Independent Businesses.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

The CHAIRMAN. Let me ask you this. I think it would be most impressive to the members of this committee if your organization, or any organization that can communicate with their members and get representative cross section, could actually their opinions and provide us with the opinion of the average businessman as to how many more people they might hire. Let me say in my State, if you could get

those businessmen to sign a statement in good faith-it need not be notarizeding if this is done we will do this. Obviously, a man still has a right and say it looked like the thing to do at the time, but changed circumstances have made it look different. But it would be very helpful to me if you could just give me a cross section of your business people, for example, in the State of Louisiana where I could go talk to those people, some of whom I would undoubtedly know personally, and say for example, here is a person who has a cafeteria and the person had to discontinue the services of someone taking the trays and carrying food to the table for our customers. We had to switch to a procedure where you just ring a bell, only for those who are disabled, rather than providing the service to all customers.

If you gave us this advantage, we would restore that service and give better service to the public. We would expand our activity.

For example, in a grocery store you provide help to sack the groceries or to carry the groceries to the car for ladies, as was once the case. If one could say, yes, here is what we would do if we had this tax advantage.

If we could actually check that with you and you could give us more or less a convincing field study I know that the members on this committee would be far more impressed with this proposal.

Mr. Motley. Senator, I would like to say that we anticipated your request. A week and a half ago, we contacted our members on this and you should be receiving some mail from our members in the State of Louisiana. They will also be sending to us signed cards as to how many jobs they will provide over the next year if a jobs tax credit of this nature is passed.

We should have this information for each of the members of the Finance Committee within 1 or 2 weeks.

The CHARMAN. In other words, if you can show me that a cross section of your people would do what you indicated, and make a good faith commitment of "here is what we will do if you will give us this tax incentive to do it," and we could actually verify that.

Mr. Motley. We would be glad to provide you with the names and addresses of people who respond. We have asked them to write you as well as us: You should be receiving copies.

The CHAIRMAN. Somebody should be a clearinghouse for the information. I hope that your association could check.

How many members do you have in Louisiana, can you tell me that?

Mr. Motley. Right now it is roughly around 5,400 firms.

The CHARMAN. It would seem to me that you might be in a position to do a crosscheck of, say, 5 percent. If you checked with 350 firms, that is a more thorough sample than Gallup usually has when he makes his poll. From that cross section you coud find out by saying, "here is what we are talking about. If that is the case, do you think you would hire more people? If so, what do you think you would put them to work doing?"

Maybe you might want to have a smaller

sample of a hundred.

Mr. Motley. We have a much larger sample. We are using in the State probably

roughly half, 2,500 firms.

The CHAIRMAN. If you can bring us evidence as convincing as you stated here, with actual signed commitments from people that said yes, if you give us this tax credit to hire people here is what we will do, I think that you can be assured that we will go along with it. We are like everybody else; we like to be convinced.

Mr. MOTLEY, Certainly.

The CHAIRMAN. Thank you very much.

Mr. LONG. The Senator from Louisiana, the chairman of that committee, was so impressed by what these people said that this would mean jobs for people in these small businesses across the width and breadth of the land that one could read into the statement of the

chairman a commitment to support that concept if it proved out.

Those people proceeded to mail to their members a questionnaire and they enclosed a card for the convenience of the recipient which he could mail back to his Senator.

I will be glad to present in the Chamber tomorrow the cards I received. I proceeded to check those cards, a sample check, but enough to be meaningful to the Senator from Louisiana, to see if these people really thought they were going to hire individuals in their businesses or if they were just thinking they might, on a very tentative and not reliable basis.

Our sampling indicates that we could expect a lot of people to be hired. It looked as though, when you interrogated them in depth, each one of them seemed to have a firm intention of hiring more people in their businesses when they said so. Some said they would not hire any additional people, but the overwhelming majority of responses which came to my office indicated they would hire these people. Mr. President, we have before us provision that deserves to be tried.

We are going to be asked to reform the welfare system. One thing we will have suggested to us, I suspect, is some sort of a proposal along the line of the family assistance plan proposed by Mr. Nixon. It might not be, but there are a lot of people in the Department of Health, Education, and Welfare who support the guaranteed income. I would not be at all surprised to see that type of thing proposed again.

Some of us contend that rather than pay \$2,400 to a family to do absolutely nothing, it would be better to give somebody a tax advantage to hire that same person to go to work. For my part, I would rather pay somebody the \$2,400 to put somebody to work at \$5,000 than I would just to pay them the \$2,400 for not working, just pay them that money to encourage them not to go to work.

We will be wanting to find out, if we make it sufficiently attractive for these small businesses to employ people in marginal jobs, whether they would employ the people and whether the people can be persuaded to take the jobs. That is going to be a considerable problem that we would like to know something about.

It is not just a matter of providing a job, but the question is, can you get someone, who is making at least half as much on welfare or unemployment compensation as he would make by working, to take the job if the job is not a high-paying job but only a job paying \$4,000 a year? It would be well to know if it would work. What better time to find out than while we are trying to provide a tax reduction across the width and breadth of this land. It would only cost about \$1.2 billion to try the jobs credit in the Bentsen amendment in that regard. If you went all the way with the House proposal, that would cost about \$2.4 billion,

If we look at the cost of these proposals to try to encourage people to do things that we would like to bring about, and if we compare that to the cost of the major welfare proposal, the jobs credit involves a far lesser amount of money than it would cost to have a major overhaul of the welfare system.

I would submit, Mr. President, that the committee has discussed the matter. I would commend to everyone the testimony of the small business witnesses, as well as the testimony of those who speak for larger businesses, who were more concerned about the need for investment tax credit.

Let me say just a word about the investment tax credit. It is true that the number of employers who would place the emphasis on the investment tax credit is small in number, but those happen to be the large employers who employ thousands and hundreds of thousands of workers. So when we look at the work force and at the jobs which might be created, it can be argued that there is a potential to create more good jobs with the investment tax credit than would be created with the jobs credit.

It was the judgment of the Senate committee that we would do well to try both and see if they would work. The combination would be that we would have something that would provide incentive for the large companies which have large payrolls and hundreds of thousands of workers; we would have something that would encourage the small businesses that have small payrolls, but that represent millions of small companies and small employers; and we would have something that would provide tax relief for ordinary citizens, mostly middle- and low-income people, in the simplification and permanent reform section.

This, in my judgment, Mr. President, is a good bill. It deserves to be passed. I am sorry that the President does not support some of the same things he recommended previously. There is nothing new about that. Presidents have been known to change their minds. In my judgment, this is a well-balanced bill. even if we leave out the \$50 tax refund.

The bill includes a provision that costs \$6 billion, that provides tax relief for people who do not itemize their deductions. They are 75 percent of all the taxpayers. That provision accounts for 70 percent of the tax net. Then we have another provision that accounts for about 15 percent of it-the jobs credit. That part applies to the small businesses of this country, where we hope to put more people to work.

Then we have another provision which is related to the most effective economic stimulus that we have tried in trying to move the economy along, the investment tax credit. We make that temporarily a better deal for business than it has been in the past.

This latter item is something that the administration recommended. The President favored that. I submit that, if that is the only part that tends to favor the larger business concerns, it only amounts to about \$1 in seven of the tax reductions in this bill. In order to get the benefit of that, people have to spend eight times as much money in providing jobs and buying new equipment as they receive in a tax advantage. It is not something that they receive in an unconditional fashion,

as is the \$6 billion of tax cuts for individuals, which applies largely to people in low and middle tax brackets.

Anyone who has more than \$3,200 of deductions would find it to his advantage to itemize rather than use the standard deduction. So that 75 percent of taxpayers who are not those best fixed, those who are in the middle-income or lower-income brackets, would be the ones who are benefitted by 70 percent of the benefits in the bill.

This is not an unbalanced bill. It is not one that is calculated to be any bonanza to those who are well-to-do.

I hope, Mr. President, that the motion to recommit will not be agreed to.

UNANIMOUS-CONSENT REQUEST

Mr. BUMPERS. I wonder if at the conclusion of morning business, when we return to the motion to recommit, if we could agree to a 2-hour time limitation with 1 hour on each side to be handled by the distinguished floor manager and myself, at the conclusion of which we would have an up or down vote on the motion?

Mr. LONG. Mr. President, I am not interested in a limitation at this time. Later on, I might be seeking unanimousconsent agreement to vote. But at the moment, I think we should go over until tomorrow. Some Senators have speeches to make.

I do not know precisely when we will vote on the Senator's motion. But there are Senators who will want to talk about the bill and Senators who will want to talk about various suggestions that they are going to make.

At this particular time, I see no point in entering into a unanimous-consent

agreement.

Mr. CURTIS. Will the chairman yield?

Mr. LONG. Yes.

Mr. CURTIS. We have a number of requests to speak on this amendment. I would not want to enter into any agreement to limit the time and cut these gentlemen off.

Mr. LONG. I think, Mr. President, there is no point in entering an agreement now. I will be seeking unanimous-consent agreements to vote later on as the matter goes, but for the moment, I am not interested in a unanimous-consent agreement.

Mr. BUMPERS. Mr. President, I must say that there was not that same concern this morning when I was acceding to the Senator's request for a unanimous-consent request to strike the tax rebate.

Nevertheless, I ask unanimous consent that a letter which is on its way over from the Secretary of the Treasury be printed in the Record immediately following the argument if it comes after we recess today.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF THE TREASURY,
Washington, D.C., April 19, 1977.

Hon. Dale Bumpers, U.S. Senate.

Washington, D.C.

DEAR SENATOR BUMPERS: I have been informed that you have requested a letter indicating the position of the Administration on the business tax reductions in the tax stimulus bill now before the Senate.

As you know, the Administration concluded that the \$50 rebate and the business tax reductions should not be enacted in view of the improvement in the current economic situation. It is our view that since the Senate has deleted the rebate you should also delete the business tax reductions in this bill. Neither is now needed in view of the improvements in the economy. In addition, we believe it is important that the business tax relief be removed in order to make it possible to develop a better balanced tax program this fall.

Sincerely,

W. MICHAEL BLUMENTHAL.

Mr. LONG. Mr. President, if there are no other Senators desiring to make speeches at this time on the tax bill, I am prepared to yield the floor and the majority leader might have some routine motions he wishes to make. But I believe for the time being that everybody who wants to make a statement has made one.

Mr. ROBERT C. BYRD. I thank the distinguished Senator from Louisiana (Mr. Long).

CAMILLA A. HESTER

Mr. ROBERT C. BYRD. Mr. President, on April 7, Mr. Allen introduced a bill, S. 1269, for the relief of Camilla A. Hester, and it was ordered placed on the calendar by unanimous consent. That bill has been cleared for unanimous-consent action.

Yesterday, I asked that the clerk place it on the Unanimous-Consent Calendar. At the request of Mr. Allen, I am now going to call it up if it is agreeable with the minority leader.

I ask unanimous consent that the Senate proceed to the consideration of S. 1269, which is on the Unanimous Consent Calendar.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1269) for the relief of Camilla Hester.

Mr. BAKER. Mr. President, the item is on the unanimous-consent calendar and there is no objection on this side to its consideration and passage.

The PRESIDING OFFICER. Without objection, the bill will be considered.

The bill was considered, ordered to be engrossed for a third reading, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of subchapter III of chapter 83 of title 5, United States Code (relating to civil service retirement), Camilla A. Hester, of Foley, Alabama, shall be deemed a widow within the meaning of subsection (a) (1) of section 8341 of such title, and if otherwise entitled to a survivor annuity under such section, shall be paid that annuity from September 28, 1972.

Sec. 2. Any amounts payable by reason of the first section of this Act with respect to any period prior to the date of the enactment of this Act shall be paid in a lump sum within sixty days after such date.

SEC. 3. No part of the amount authorized by this Act in excess of 15 per centum of the sums described in section 2 of this Act shall be paid or delivered to or received by an agent or attorney on account of services rendered in connection with this claim, and the

As you know, the Administration con-same is unlawful, any contract to the concluded that the \$50 rebate and the business trary notwithstanding. A violation of this tax reductions should not be enacted in view section is a misdemeanor punishable by a of the improvement in the current economic fine in an amount not to exceed \$1,000.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which that bill was passed.

Mr. ALLEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER FOR RECESS UNTIL 12:30 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, when the Senate completes its business today, it stand in recess until the hour of 12:30 p.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR ROUTINE MORNING BUSINESS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, after the two leaders or their deputies are recognized on tomorrow under the standing order, there be a period for the transaction of routine morning business of not to extend beyond the hour of 1 o'clock p.m., with statements limited therein to 5 minutes each.

The PRESIDING OFFICER. Without

objection, it is so ordered.

ORDER FOR RECESS FROM TOMOR-ROW UNTIL 12:30 P.M. ON THURS-DAY, APRIL 21, 1977

Mr. ROBERT C. BYRD. Mr. President, I take it that, automatically upon the close of morning business, the Senate will resume consideration of the pending matter.

The PRESIDING OFFICER. The Sen-

ator is correct.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at the conclusion of the President's address to the joint session tomorrow evening, which will be in the Hall of the House of Representatives, the Senate stand in recess until the hour of 12:30 p.m. on Thursday.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, in order that all committees may be apprised ahead of time, that all committees may be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, for the information of the Senate, the Senators will gather in the Chamber here at around 8:30 p.m. tomorrow night and, at the hour of 8:42 p.m., they

will assemble to proceed in a body to the Hall of the House of Representatives, where the President of the United States will address the joint session. As the order has already been entered, following that address, the Senate will automatically stand in recess until the hour of 12:30 p.m. on Thursday.

The Senate will convene at 12:30 p.m. tomorrow. After the two leaders or their designees have been recognized under the standing order, there will be a period for the transaction of routine morning business not to extend beyond the hour of 1 p.m., with statements therein limited to 5 minutes each. Upon the conclusion of routine morning business, the Senate will resume consideration of H.R. 3477, an act to provide for refund of 1976 individual income taxes and other payments, and so on. Rollcall votes may occur on amendments to the measure or on motions in relation thereto tomorrow.

It is conceivable that other things could be brought up that have been cleared for action. Conference reports are privileged matters which can be brought up and on which votes may occur.

I believe that is about as far as I can go in stating the program for tomorrow.

RECESS UNTIL 12:30 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in recess until the hour of 12:30 p.m. tomorrow.

The motion was agreed to; and at 6:44 p.m. the Senate recessed until tomorrow, Wednesday, April 20, 1977, at 12:30 p.m.

EXTENSIONS OF REMARKS

REGULATED MOTOR CARRIERS SUPPORT NATIONAL SPEED LIMIT OF 55 MILES PER HOUR

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Tuesday, April 19, 1977

Mr. RANDOLPH. Mr. President, as a long-time advocate and as the Senate sponsor of the national 55 mile per hour speed limit of 1974, I would share with Senators several newspaper articles and editorials.

The American Trucking Associations, representing the regulated motor carrier industry, is commended for its endorsement of the 55 mile per hour limit and for urging other highway users to obey the law.

Among the steps taken by the industry is a letter to the chief editorial writer of every daily newspaper in the United States asking additional support of the 55 mile per hour limit. The American Trucking Associations is undertaking an educational campaign among drivers in regulated motor carriers on the merits of the 55 mile per hour limit and on the dangers of tailgating.

Mr. President, it is readily apparent that the reduction in highway speed has saved lives. Highway fatalities dropped from 55,639 in 1973 to 45,954 in 1975, even though the number of total vehicle miles rose from 1.308 billion to 1.315 hillion.

The editorial support received is gratifying. The news media serves the Nation well by promoting the cause of the 55 mile per hour speed limit.

Mr. President, I ask unanimous consent that a sample of the editorials be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

RESPONSIBLE TRUCKERS

Several weeks ago, the Telegraph published an editorial highly critical of the attitude of a group of truckers. This group—the Independent Truckers Association (ITA)—had put out one of the most irresponsible press releases we've seen in a long, long time.

The ITA release called for the removal of

the 55 miles per hour speed limit currently in

force on our nation's highways. Pleading their case of being able to get from one place to another in the shortest possible time, the ITA said, "While no one likes highway deaths, the speed limit of 55 miles per hour costs far more in personal aggravation."

"If Gary Gilmore can be allowed to kill himself, or to be sentenced to death," said the ITA, "then the nation's speeding motorists should have the same right."

We were delighted to learn the other day, that the ITA does not speak for the trucking

industry as a whole.

A recent release by the American Trucking Associations (ATA) endorses the 55 miles per hour limit and points to federal statistics which prove incontrovertibly that the limit has shown a saving in lives. We were also pleased to note that the ATA—the organization which represents the regulated motor carriers-has instituted a program on the dangers of speeding and tailgating.

Our hat is off to the American Trucking Associations in its efforts to combat a totally irresponsible attitude on the part of a few independent truckers.

SPEED AND ENERGY

The Independent Truckers Association is engaged in traffic slowdowns and other tac-tics as a protest against the 55 mile-perhour speed limit. The truckers claim they're losing time, and as a result profits.

Supporting the speed limit is the American Trucking Associations, representing the regulated industry. Its chairman, Robert H. Shertz, said "it's clear that slower speeds

Figures published by the National Highway Traffic Safety Administration prove that the 55 mile-per-hour limit is not only a life saver but also an energy saver. The data collected in 1975 shows the average speed for vehicles was 55.8 mph. Passenger cars had an average of 56.2 mph, buses 55.4 mph and trucks 54.8 mph.

From 1973 to 1975 the number of highway fatalities dropped from 55,639 to 45,954 although total vehicle-miles operated in-creased from 1,308 billion to 1,315 billion. Fatality rates for accidents involving trucks were cut in half.

There is no logical reason why the authorities should consider any application for an increase to 60 mph or more. Right now the present speed limit is saving lives as well as precious energy.

In fact an alternative to President Carter's proposal for a 25-cent-a-gallon tax on gasoline could be a reduction of the speed limit to 50 or 45, coupled with stricter law enforcement.

A tax won't make a dent in energy use. Reduction of the speed limit will save millions of gallons of gasoline.

55 M.P.H.

One particularly surly radio announcement features a voice purported to be that of a highway patrolman who emphasizes "55 miles per hour—it's the law."

No matter how irritating the radio spot may be, it is hard to argue with the logic and the lifesaving reality of the message it imparts.

The 55 m.p.h. speed limit received an important-and somewhat unexpected, to some people—supporter last week. The American Trucking Association, regulator of non-independent truckers in the nation, said it supports the federally-imposed limit which was mandated at the height of the gasoline crisis.

In a release issued to newspapers throughout the nation, the ATA said it has been "reluctant to seek help for its support since it is difficult for most motorists to tell the difference between independent and company trucks on the highways. ATA feels the statistics favorable to the motor carriers industry gives the regulated motor carriers a peg for seeking support for the 55 m.p.h. limit."

The release goes on to cite statistics released by the National Highway Traffic Safety Administration showing that trucks actually have a record of traveling about one mile an hour slower on the highway than either private cars or passenger buses

It urges the trucking industry to do even better in setting a good example for all mo-

The ATA said it found the slower speeds not only save companies fuel, but cut accidents on the highways as well.

Colorado State Patrol Lt. William Wolfe pointed out recently that statistics nationwide show that slower speeds not only cut the number of accidents by giving drivers a split second more reaction time, but they also cut the severity of those accidents.

The bottom line reads fewer injuries and fewer deaths, and overall, a safer system of highways for motorists—and the families they love—to travel.

Over the past three years or so, motorists have become more and more accustomed to the 55 m.p.h. limit. Oh, for some, the lower limit has only meant they've cut their speed from 90 m.p.h. to 75 m.p.h. And others feel relatively safe traveling at 62 or so, feeling most law enforcement officials don't waste their time with a mere five or seven miles per hour over the limit (they often do).

But a majority of drivers have found they

actually like traveling a little bit slower, taking a bit of the edge off the tension of maintaining control over their car, and taking the time to enjoy just a bit more of the beautiful scenery around them.

Even on long trips, the lower limit makes sense. Though you may reach your destina-tion 20 minutes, 45 minutes, or even an hour or two later, when you get there, you'll find yourself just a little less high-strung and ready to take care of whatever business—or

enjoyment-you had planned.

Besides, you may not even be saving as much time as you may think. A trial run some years back between Grand Junction and Denver had one driver observe the 55 m.p.h. limit and a second, in a powerful sports car made the trip as fast as he could travel.

The difference? About 20 minutes or so for

the five-hour jaunt.

Increasingly, the 70- and 80-m.p.h. driver will meet up with impatience and downright irritation from drivers trying to conserve fuel and save lives by driving the legal limit. The life the highway speeder is endangering through his foolish—and "fuelish"—action is not only his own. He is endangering the lives of anyone who happens to cross his path.

That is enough, or at least it should be, to enrage even the most docile of safe drivers. Clean it up. The 55 m.p.h. limit, It makes

sense. And its the law.

KEEP THE DOUBLE NICKEL

The nationwide 55 mph speed limit is getting some strong support these days from an unlikely source—the regulated trucking industry.

But, you might ask, haven't truckers often complained about the so-called Double Nickel? Haven't they urged its repeal?

The answer is yes, many of them have contested the speed law and still do. But others are now supporting this fuel saving measure because experience has shown that it works. It is not only saving energy, but lives as well. And, believe it or not trucks are making a better record of complying with the law than automobiles.

Robert H. Shertz, chairman of the American Trucking Association, cites Government statistics in urging continued backing of the 55 mph limit. Some of the statistics

are surprising.

While it is true that many motorists seem to ignore the law, it has, on the average, slowed traffic to 55.8 mph on level, straight sections of main rural roads, including the interstate system. The figures come from "55 MPH Fact Book," published by the National Highway Traffic Safety Administration.

The agency's studies show that passenger cars have been averaging 56.2 mph, buses

55.4 mph and trucks 54.8 mph.

About 55 per cent of all vehicles observed in the NHTSA studies exceeded the 55 mph limit. For trucks the figure was 50 per cent; for passenger cars 58 per cent. Only 21 per cent of all vehicles exceeded 60 mph—23 per cent of passenger cars and 16 per cent of trucks. So it is clear that despite imperfect enforcement and frequent violation, the average motorist has slowed down considerably since the days of the 70 mph limit.

The NHTSA figures also show that between 1973 and 1975, highway deaths dropped from 55.639 to 45.954 although the total vehicle miles traveled increased during the same

period.

Many independent truckers are still opposed to the 55 mph limit, but at least part of the industry has seen more advantages in lower speed than disadvantages.

ARE WE "GOING BACK" TO 55 MPH?

The 55-mile per hour speed limit is law. Compliance with it, however, is another matter. Far too many motorists disregard it. Oftentimes an automobile driver will say, "Look at those truck drivers. They wheel past us and I know they're exceeding the speed limit." Association is easy to compromise, and the car driver exerts a bit more pressure

on the gas pedal and soon he's keeping pace with the trucker just ahead of him.

But the trucker might be the means to accomplish what the federal government wants: slower speed, less fuel consumption, safer driving.

The regulated motor carrier industry, through its organization—the American Trucking Assn.—has come out in support of the 55-mile per hour speed limit. It reported it is against traffic slowdowns and other tactics of the Independent Truckers Assn., which is protesting the national speed limit.

And the regulated motor carrier industry seeks an increase in efforts in behalf of the law. A report by the National Highway Traffic Safety Administration indicates that the 55 MPH limit is "a life saver and an energy saver." The data collected revealed that both passenger cars and buses travel faster than trucks. The emphasis will be that "slower speeds save lives."

The Wisconsin Truckers Safety Council went a step further. At a meeting this month, it adopted a resolution which "strongly encourages truck drivers to comply with the 55-mile per hour speed limit and set an example for all drivers."

Now if other truckers not affiliated with ATA will follow suit the hazards motorists complain about, such as trucks speeding and tailgating, should decline dramatically. Then if the heavy-foot bus and automobile pilots will ease up a bit, we can get back to the limit we should be observing. We'll save on gas, which is getting mighty expensive, and lives, too, probably our own.

TRUCKS CAN SLOW DOWN, Too

As a good many drivers have suspected, the trucking industry can manage the 55-MPH speed limit the rest of us are supposed to

observe-and still make a living.

Robert H. Shertz, chairman of the American Trucking Associations, recently praised his industry for having a better record on compliance with the national law than either automobiles or buses. His congratulations were based on statistics compiled by the National Highway Traffic Safety Administration which indicate that trucks average 54.8 miles an hour on the open road, believe it or not, while passenger cars average 56.2 and buses 55.4 MPH.

His organization, ATA, represents the "regulated" motor carriers—that is, company owned truck fleets, as distinguished from the independent truckers who may be the source of some of the dissatisfaction and uneasiness among other drivers and who apparently have been planning slowdowns and other demonstrations against the national speed limit.

Whatever the merits of those averagespeed statistics, it is a fact that highway fatalities dropped between 1973 and 1975 from more than 55,000 a year to somewhere around 45,000 and Shertz says data also indicated a decrease of 24 per cent in accidents in which trucks were involved and a 26 per cent decrease in fatalities and injuries in truck-involved accidents.

Clearly the savings in dollars as well as lives to the trucking firms must have been immense, providing an additional argument that "Stay Alive—Drive 55" should apply to everybody.

If there are still truck deadlines to be met which can only be maintained if the behemoths of the highway break the laws, then plain sense dictates rescheduling by the dis-

And if the law means what it says, it also means that enforcement officials up and down the line should make no exceptions for truckers

Further, in a day when it is at least hoped that people will turn to smaller, lighter, more

fuel-saving vehicles, the prospect of huge semi-trailers, some in caravan style, thundering past everything on the road becomes ever less permissible.

We are glad to note that a part of the trucking industry is very much aware of the safety as well as the energy-saving situation and is moving to make what is necessary even more acceptable.

There's a new day coming—if it isn't already here—and we ALL have to be part of it.

CLOSE TO LIMIT

It may come as a surprise to other drivers, but the American Trucking Associations of Washington, D.C., has just published federal data showing that trucks are doing better than cars or buses in complying with the 55 miles per hour speed limit.

'The truckers say the National Highway Traffic Safety Administration's new "55 MPH Fact Book" shows that during 1976, the average speed for all vehicles was 55.8 mph. Passenger cars showed an average of 56.2 mph, buses 55.4 mph, and trucks 54.8 mph on level, straight sections of main rural roads, including interstates.

Some 55 per cent of vehicles exceeded 55 mph limits: 58 per cent of passenger cars, 50 per cent of buses, and 49 per cent of trucks. Some 21 per cent exceeded 60 mph: 23 per cent of the passenger cars, 24 per cent of the buses, and 16 per cent of the trucks.

On interstates, the average speed was 57.6 mph: for cars the speed was 58 mph, for buses 57.4 mph, and trucks, 56.6 mph. Some 68 per cent exceeded the 55 mph limit, including 71 per cent of the passenger cars, 65 per cent of the buses, and 61 per cent of the trucks.

Annual fatalities dropped by 10,000 a year in 1975 and 1976 from 1973, and motor carrier accidents in 1975 and 1976 decreased 24 per cent from 1973.

Which brings the trucking groups around to an admission that they weren't willing to make when the 55 mph speed limit was imposed. They fought it hard, saying it would be ruinous to their schedules and fuel costs. Now they hall it as a life saver and an energy saver.

Now we motorists will have to come around to a new point of view soon, too, unless we can poke holes in those statistics. When a big semi swooshes past, hammer down, we'll have to admit that this is (however spectacular) an exception, since only a minority go so fast; that trucks are moving closer to legal limits than any other kind of vehicle. Maybe it's just because they're so BIG they seem like more.

Matter of fact, since truckers know more about Smokey and the road ahead, and have the figures with them, we'd better go them one better and try to stick on the 55 mark in our cars. If it's that much safer and more economical for them, think what it could do for us.

BRINGING ACCOUNTABILITY TO THE POST OFFICE

HON. DAVE STOCKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. STOCKMAN. Mr. Speaker, the Postal Service was created to isolate the operations of the post office from political pressure. But it was also intended to be run in a more businesslike manner than its predecessor, perhaps even be self-sustaining. What we have in practice, however, is a curious hybrid.

The Post Office spends hundreds of millions of dollars of the taxpayers' money each year, yet its senior management is not appointed in the same way as that of other departments of Government.

I am introducing a bill today that would make the Office of Postmaster General a Cabinet-level post appointed by the President with the advice and consent of the Senate. At present, the Postmaster General is appointed by the Board of Governors of the Postal Service. While this board is itself composed of Presidential appointees, I believe that it would be more desirable to have the chief executive of the Postal Service appointed directly by the President.

The reason why we should return to a Cabinet-level Postmaster is straightforward. Despite the change in name, the Postal Service is still functionally an integral part of the public sector. We should not permit any part of the Federal Government to operate without sufficient mechanisms for review and accountability of its activities. If the Postmaster General is appointed by the President, and not by the Board of Governors, the President can be held responsible for failure to implement suitable policies at the Postal Service.

The present structure does not permit sufficient accountability of the decisionmaking leadership of the Postal Service. Because the members of the Board of Governors serve for 9 years, they are essentially beyond the control of the President. This leaves him with no avenue for directing the policies of the Postal Service, despite the hundreds of millions of dollars appropriated to subsidize its operations each year.

I believe that whatever the intended benefits of isolating the Postmaster General from the political appointment were, they are far outweighed by the present lack of accountability of the top management of the Postal Service. If the appointment was the subject of abuse in the past, the Congress need only exercise its authority under the advise-and-consent section of this bill to disapprove politically motivated appointments. Isolating the Postal Service from all Presidential and congressional pressure is an overreaction to the problem.

What we need, Mr. Speaker, is more accountability on the part of the senior management of the Post Service. What we also need, Mr. Speaker, to put it bluntly, is more leverage over the Postal Service. Having a Presidentially appointed Postmaster General would give us some of the leverage we need to insure that the holder of this key position performs in a manner most consistent with the public interest.

FARMING'S FUTURE

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. GRASSLEY. Mr. Speaker, a young man from my district, the Third District of Iowa, Keith Meitner, recently won the 1977 Iowa Farm Bureau essay contest. Keith, a 16-year-old high school junior from Osage, articulated well the problems today's farmer, and the farmer of the future face. As a farmer myself, I am pleased to see young men such as Keith still interested in entering this important occupation. Unfortunately, all too often the farmer is blamed for everything that is wrong with the food industry without receiving the credit he deserves. We need young people such as Keith, who are practical and yet idealistic, to continue the fine tradition of Iowa agriculturalists. I would like to share his prize-winning essay with my colleagues.

FARMING FUTURE IS NOW (By Keith Meitner)

To prove that the Iowa farmer is productive and professional, you must first understand what this means. To be a productive farmer means that you must produce to the best of your ability, and to be professional means that you are engaged in your own specific occupation. The general public does not realize how productive or how profes-

sional the average Iowa farmer is.

A recent survey indicates that the average Iowa farmer produces enough food to feed 55 people. The survey also shows that Iowa is number one in the United States for corn production and hog production. Iowa also has 25 percent of the Grade A land in the nation. In 1973, Iowa farmers produced \$4.6-billion worth of grain products, which makes Iowa the number one state for total farm production value. An Iowa farmer produces enough beef for 295 U.S. consumers, enough pork for 524 consumers, enough dairy products for 90 consumers, enough lamb for 11 consumers, enough turkey for 113, and enough eggs for 65 consumers.

enough eggs for 65 consumers.
Facts make everything sound so easy, but

how easy is it for the farmer?

The first part of becoming a productive farmer is to become professional. You must decide what you are going to specialize in and how big of a producer you are going to be. Then comes the time for training to learn your trade in the best possible way. By training, I mean such thing as being able to handle dangerous chemicals and understand the labels on the containers. Training also helps you in that you can mix feed rations properly and also be able to manage money wisely.

There are many possible ways of learning

There are many possible ways of learning your trade, and the best way is learning by doing. You can go to school and attend classes, but you must get involved early. Once you've become a productive farmer you can join a group like the Farm Bureau or attend night school to keep up to date on the progress of the marketing world.

Now that you have your schooling, you can start producing. When you come to Iowa to farm there is a good chance that you will farm choice land. There is also a chance that you will be a primary producer

of corn and pork

Farming is not always profitable, but living in Iowa makes your chances of showing a profit all the better. Statistics show the Iowa farmers realized average net income for 1973 was \$9,193. This includes the small farmers as well as the large corporations. This does take into account, however, that Iowa's farm population is number one in the nation with 544,000 residents in 1970. The best way to be a profitable farmer is to learn your profession and learn it well.

I think that my being a member of the Future Farmers of America is one way in which I can become a productive and professional farmer. Like the first line of our creed (the FFA creed) says, "I believe in the future of farming." I believe the best way to see the future is to use the present wisely.

EARTH WEEK AND ENVIRONMEN-TAL EDUCATION

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. BRADEMAS. Mr. Speaker, the President has by proclamation designated the week of April 17-23 as Earth Week. This provides us the opportunity to reflect on the need to preserve and enhance the fragile environment which nurtures and sustains us. It is particularly appropriate that we remain sensitive to environmental concerns during a week dominated by discussions of the energy crisis and the appropriate responses of public policy to it. Clearly to achieve a good life for all of our citizens we must both effectively conserve and develop our energy resources and safeguard the ecological balance in which we live.

The Environmental Education Act has proved to be one of the most useful programs for creating an informed awareness of environmental issues and a capacity to deal with them. An article in the New York Times on March 27, 1977, describes the growth of environmental education and the important impetus that the Environmental Education Act has given to it. The text of this article and the President's proclamation follow: [From the New York Times, Mar. 27, 1977]

ENVIRONMENTAL STUDY IS GROWING UP

(By Gordon F. Sander)

Johnny Appleseed would have been pleased: Environmental education is on the boom. Across the United States, in thousands of projects and courses that feature everything from hayrides and songfests to emotional discussions of air pollution and oil spills, American schoolchildren and their teachers are being educated in the eternal verities of nature, as well as the equally eternal profligacy of man.

The growth of environmental education (also called "ecology," "conservation," and "outdoors" education) is an offshoot of the ecology movement of the last decade, inaugurated during the nationwide "Earth Week"

of May, 1970.

Since then, the movement for better environmental education has received additional impetus from such natural or manmade catastrophes as the recent Argo Merchant oil spill and the drought that is currently parching the Western states.

"Crises tend to educate people," said Rudolf Shaefer, environmental education counselor in California's Department of Education. "Nevertheless," he said, "you can't get a sustained commitment based on scares. Just look at what happened during the energy crisis. A few years ago you couldn't give away a Cadillac. Now they're chic again. Tell me: what have people learned?"

To build a sustained and knowledgeable commitment to the environment, educators in localities large and small are now striving to involve their students in an active and constructive relationship with the outdoors. The most popular approach is to have students learn by doing. For example:

In Santa-Clara, Calif., high school students have created a community recycling plant, and are now earning credit for supervising it. One graduate of the project was considered expert enough to deliver a paper on ways to ensure global environmental quality to a recent United Nations Environmental Studies Conference in Stockholm.

In Catoctin Mountain Park, near Camp

David, Md., sixth graders from the public schools in Washington, D.C. are being exposed to such subjects as stream and woodland ecology in the "Round Meadow Environmental Laboratory."

On the Hudson River, aboard the sailboat Clearwater, crews of secondary students from nearby Hudson Valley communities are learning not only how to sail and use wood stoves but how to operate sophisticated antipollution equipment and sewage disposal units as well.

In an outdoor Eco-Center in Thomson, Ill., students participate in an intensive "canoe-camping-study" course which requires them to prepare their own "environmental impact statements."

In Elgin, Ontario, students from 15 high schools in a course called "Our Sun: Our Provider" spend 10 weeks each summer setting up demonstrations showing how to save energy in the home. Recent student inventions include a wind-powered pumping system and a sun-powered oven.

Many of these projects are partially funded by the Department of Health, Education and Welfare's Office of Environmental Education, created by Congress in 1970 to help raise the nation's "environmental literacy." Operating on a budget that has varied between \$1.5 and \$3.5 million a year, the environmental education office annually receives at least a thousand grant requests from environmental educators across the United States. Of these, between 5 and 10 percent receive necessarily modest grants ranging from \$10,000 to \$50,000.

Walter Bogan, director of the Office of Environmental Education since 1972, thinks that the boom in environmental education is finally beginning to tail off. "The number of requests we receive has been declining recently," he said. "Nevertheless, their quality—by which I mean their creativity and thoughtfulness—has definitely improved."

Now that environmental education is past its faddish phase, Mr. Bogan believes that such education is rapidly becoming more sophisticated. He points out that as a result of the effort of a number of communities, more and more secondary school students are becoming competent in environmental issues. He also says that cooperation between secondary and higher education environmental authorities has increased, with the result that the materials used in the secondary classroom show "much more expertise." The Office of Environmental Education itself recently gave money to the National Science Foundation to develop a package of energy-related teaching materials that Mr. Bogan hopes will soon be used nationwide.

Mr. Bogan says that more and more school systems are using a "multidisciplinary" approach to environmental education. "Environmental education seems to have finally passed the show-and-tell approach," he says. "More teachers are exposing their students to the cultural, economic, and legal aspects of environmental problems and issues."

Michelle Perreault, chairman of the Sierra Club's environmental education committee, agrees. "Environmental education used to be something that was isolated inside a school's science department. More and more educators are beginning to see that it isn't simply a subject you can pigeonhole."

An example of the multidisciplinary approach to environmental education is the "Energy and Us" course taught at Kelly Walsh High School in Casper, Wyo. The course grew out of a temperature inversion that occurred in 1972, intensifying the smog emitted by a local power plant.

As a result of questions students raised about the incident, the school developed a course about energy and energy-related

problems taught by members of the school's biology, chemistry, physics, and sociology departments. Students, who help plan the content of the course, now regularly visit the offending power plant and other local industrial sites and report their findings to community groups.

Usually the spark that translates environmental awareness into environmental action is provided by the teacher himself. One such teacher is Arthur Cooley, a biology teacher at Bellport High School in Brookhaven, L.I. In 1969, Cooley's students began a group study of the Carmans River, which runs through the school district. As industrial development in the county grew, Cooley and his students saw the river becoming increasingly polluted.

With Mr. Cooley's sponsorship, 25 students banded together into an environmental action group, "Students for Environmental Quality," and began a campaign to save the Carmans.

Partly as a result of intensive student lobbying, the New York State Legislature decided to place the river under the protection of New York's Wild, Scenic and Recreational Rivers Act. The student group is still active, and is now working to pass legislation against throwaway bottles.

EARTH WEEK, 1977: A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

Since the beginning of this decade, we have begun to recognize that our planet's capacity for satisfying the needs of mankind has limits. We have begun to see that we are its stewards, not its masters. Human activities, even well-intentioned ones, can indict deep and lasting damage to the earth, the air, and the living plants and animals on which we depend. Protection of the environment is a debt we owe to curselves and to those who will follow us.

During this same decade we have seen the effects of our activities grow increasingly severe. In the poorer nations, population growth on limited land has placed pressure on the environment. In the industrialized world, patterns of production and consumption have increased pollution, begun to deplete resources, and generated hazardous substances which the earth does not naturally assimilate.

Some have questioned whether we can afford to pay the costs of reducing pollution, protecting our health, and preserving our national heritage. The truth is that environmental controls are consistent with a sound economy, and if we ignore the care of our environment our economy will eventually suffer.

It is appropriate, as spring brings warmth and the flowering of life, that we celebrate Earth Week. The concerns which it symbolizes must become a part of our private and public philosophies.

NOW, THEREFORE, I, JIMMY CARTER, President of the United States of America, do hereby designate and proclaim the week beginning April 17, as Earth Week, 1977. I call upon officials and employees of all levels of government, business leaders, the communications media, and all Americans to join me in making environmental protection a fundamental concern that underscores all our actions.

In particular, I ask all educators to consider introducing an ecological perspective into every scholastic or academic discipline to encourage future application by graduates to protect the health of our planet.

In witness whereof, I have hereunto set my hand this twelfth day of April, in the year of our Lord nineteen hundred seventyseven, and of the Independence of the United States of America and two hundred and first. CHINA AND POWER POLITICS

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the following column by my constituent, Gen. Henry Huglin. General Huglin is a retired Air Force brigadier general and syndicated columnist. He comments on the considerations the United States must keep in mind as our relations with the Peoples Republic of China are reappraised.

CHINA AND POWER POLITICS (By Henry Huglin)

Five years ago our government established official contact with Communist China. This superb act of power politics has had many good ramifications for us.

Our relationship with China is highly important to our other relationships, particularly with Soviet Russia, but also with Japan, Korea, and other nations.

But our China tie has to be viewed realistically and dealt with skillfully. The Carter Administration has apparently yet to take any action regarding it—other than a meeting President Carter had with Peking's top liaison official in Washington. Likely, the Administration is waiting for its relations with the Soviets to jell, as well as the new regime in China to settle down.

However, we can expect that steps must soon be taken to develop this relationship further. A major factor in how it will evolve will be the success or failure of the Carter Administration in dealing with the Soviets on arms control and further efforts at detents.

In any event, our "Chinese Connection" is a major card we have potentially to play in our vital game of power politics with Soviet Russia.

The principal interest of the Chinese in our country is in our strength and readiness to counter the Soviets' ideological and geopolitical expansionism, backed by their massive and growing military strength

sive and growing military strength.

A major concern of the Chinese has been about our will and staying power to fulfill the responsibilities that fate and the strengths of our nation have given us as a superpower at this time in history—when the only other superpower is Soviet Russia with her persistent expansionist objectives.

The Chinese have a bitter feud going with the Soviets. It is based on deep mistrust, mutual fear, conflicting geopolitical claims, and ideological competition for world communist leadership.

The Soviets, because of their overwhelming military strength, have no need to make deals with us to help them in their feud with the Chinese.

But the Chinese have a great need for us as a counterweight to the Soviets. And they have urged that we keep our forces in Korea our bases in the Philippines, and a strong presence in the Pacific—to counter the Soviets in this area of most concern to them. They have even urged strengthening of NATO, with the obvious hope that, thereby, more of Russia's military forces will be deployed in eastern Europe.

The Chinese communists are evidently shrewd calculators of power. Their policies and actions in the international arena—as those of the Soviets—are likely going to continue to be based on realistic power politics. Differences with us on ideology or on human rights will be entirely secondary to

what they consider as a grave Soviet threat to them and their interests in the world.

The Carter Administration will, of necessity, face up to the grim power politics game are involved in with the Soviets—with survival of our way of life, not just human rights, at stake. Hopefully, President Carter will play all our cards well, with a recognition that China potentially could be an ace in the hole for us.

If the arms control negotiations with the Soviets bog down—as they may well over human rights, or other factors—a quasialliance and military and technological aid to China could be parts of a major ploy our government could play

government could play.

And, in this crucial game, stark realism is sometimes needed instead of, or at least in addition to, lofty moralizing and do-good sloganeering.

Further, how well we deal with China now may also have major influence on how she evolves as she becomes stronger, with industrialization and more skilled employment of a population that may exceed one billion by the year 2000.

Establishing full diplomatic ties with Peking—which would entail our denouncing our security treaty with the government on Taiwan, causing many undesirable ramifications—will likely not really be important to further development of our relationship. Our mutual interests are the motivating factors, and the absence of formal recognition or other diplomatic protocols should not be a significant handicap to our realistically evolving ties.

But as we improve these ties, we should have no illusions over our differences. The Maoist Chinese are our adversaries in many aspects of international affairs. Their main reason in dealing with us will remain their fear of the Soviets.

Further, our relations with the Chinese, no matter how good, will not likely curb their occasional rhetoric against us, which they use mainly in pursuit of leadership of the "third world;" although annoying, this is not a crucial matter.

is not a crucial matter.

So, let us not view the Chinese through any rose-tinted glasses, but still recognize that our continued and improved relations with them are, potentially, a vital piece in our grim game of global power politics.

MICHEL-TOWER FOOD STAMP RE-FORM

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. MICHEL. Mr. Speaker, today, I am joining Senator Tower in introducing legislation to reform the food stamp program. It is our intention to shape the food stamp system in a way that will provide needy Americans with a nutritional diet, without the billion-dollar waste and fraud the existing program has generated.

We are proposing limits on the gross income of a family seeking to qualify for stamps. We are proposing a purchase requirement that is fair and equitable. We are proposing restrictions on the purchase of junk foods. We are proposing work requirements and the machinery to eliminate fraud and other abuses.

We are also providing additional ben-

efits aimed at the elderly and a framework in which those who truly need help in improving their diet can get it.

We are not proposing a welfare program which supplements family income. What we are attempting to do is feed hungry Americans better and more economically. That was the intention of the food stamp program when first conceived more than a decade ago and I believe that should be the intent today.

During the last session of Congress, we had more than 100 cosponsors behind our food stamp reform efforts. In this session, I am confident we will have more. I am also hopeful that we will be able to work with the administration in drawing out the best of the major reforms we have proposed.

However, I don't want to see the food stamp program become a victim of political opportunism. We have to face the reality that the food stamp program is costing the American taxpayers \$6 billion a year and could cost \$2 billion more if we don't do what we have to do. No matter how good our intentions, we cannot tolerate millions of dollars in waste, ineffective administration, and a gross abuse of eligibility requirements for the sake of a food stamp program that only works on paper. The American people expect us to meet their basic human needs, but they also expect us to do it efficiently and honestly.

MANDATORY RETIREMENT

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. GRASSLEY. Mr. Speaker, last month, hearings were held before the Select Committee on Aging regarding the issue of mandatory retirement. In those hearings, I charged that mandatory retirement policies are among the cruelest forms of discrimination in this society. Though several witnesses claimed that today's pension plans make retirement less of a personal trauma than might otherwise be the case, I just received a letter which demonstrates that forced retirement is still a major shock to many. For those of my colleagues who view forced retirement as a means of achieving certain social objectives deemed more important than the emotional well-being of millions of older Americans, I invite you to read the following:

LETTER

DEAR SIR: I am interested in the hearings on mandatory retirement policies. I have a classical example of how unjust and cruel a forced retirement can destroy a person.

My husband was an employee for 23 years. He was supervisor of office services and absolutely loved his job. The employees who were in his department were horrified and cried, when they learned my husband was forced to retire. Many, many people from all departments came to my husband's office when they learned of the cruel treatment.

A young man who had just been brought into the Evansville division from the home office, was put in charge over my husband's department. He made a remark when he arrived at the plant and looked over things. He said, "All I see is old people! I want some new blood in here."

Shortly after his arrival he called my husband to his office. My husband was 58 at the time and had planned on working the next 2 years to get his affairs in order before retiring. The young man told my husband to sit down and handed him a folder and said, "You can take your choice as to how you want your pension to operate." My husband was practically in a state of shock and told him he wasn't thinking of retiring until 2 years. This man told my husband he had no choice as—"You are too old and your retirement starts in 2 weeks."

When my husband got home that day he was terribly pale, shaking and deeply depressed. I was alarmed at his state but, it was nothing to what it was a month later! He could not sleep, he had no appetite and he lost 30 pounds in a month.

The inhuman way in which he was treated and the statement "you are too old" destroyed any feeling of worth and a sense of

dignity.

To make matters worse, the first week he no longer had his job, the company called him at home and asked him to come in to teach someone the work of his department. He was asked for 3 straight following weeks "to help out." Much against my judgment, he did so. He told me that he wanted to do that as he "remembered all the good years" he had worked for the company.

I made an appointment for him with our family doctor as his mental and physical condition continued to deteriorate. I told our doctor about his treatment and then the request for his help at work. Our doctor was quite angry and he told me, "I would have told them to go to hell!" That isn't what I wanted to tell them but I'm certain the feeling was the same.

It is a heartbreak to sit and live beside someone you love and every day see them die little by little. If there would be anything or way I could prevent this happening to anyone else, I would do anything to accomplish that end.

I sincerely hope that you will give this matter your deepest attention. I feel people should be treated with kindness and compassion. Surely 23 years of commitment and loyality with a zest to do a good job for a salary should deserve better than a forced retirement.

Sincerely,

Name omitted by request.

RENTAL SECURITY BILL

HON. EDWARD P. BEARD

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. BEARD of Rhode Island. Mr. Speaker, I am introducing a bill today that I believe provides an absolutely necessary protection for our elderly citizens and retirees. First of all, it eliminates the social security benefit requirement for the rental or occupancy of low-rent public housing or other housing which is supported by Federal subsidy.

supported by Federal subsidy.

Every time a recipient gets an increase in social security benefits, rental charges

usually go up. Most of these housing units are rented with no lease and the renter has no protection whatever from arbitrary increases based solely on the small increase that may have been voted by Congress.

This bill also calls for elimination of the social security increases as a basis for eligibility in the rental of federally subsidized housing.

ALCOHOL ADVERTISING AND THE T.AW

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. BROWN of California. Mr Speaker, today 24 of my colleagues and I have introduced legislation that would disallow alcoholic beverage advertising as a business tax deduction. The reason for this bill is a very logical one: The Federal Government should not be providing an incentive through the tax structure for advertising a product that is responsible for a cost to society of between \$15 and \$25 billion annually. The taxpayer pays twice for alcohol abuse, once directly in treatment and prevention programs that totaled \$313 million in 1976, and again in the form of tax deductions for alcoholic beverage advertising expenses that totaled \$310 million.

The purpose of this advertising is to increase the consumption of alcoholic beverages and whether the alcohol is "reasonably" consumed or abused is no responsibility of the manufacturer, according to the liquor industry. But is this veiw consistant with current law in the area of advertising, food and drugs, and

product liability?

Alcoholic beverages are defined as food products even though alcohol for internal consumption can be defined as a drug under the Food, Drug, and Cosmetic Act of 1938. It is only the years of common use of alcohol that has caused this arbitrary classification since alcohol is pharmacologically defined as a psychoactive drug, an open-chain narcotic. Yet even as a food product, alcoholic beverages should clearly detail their contents and possible side effects as the 1938 law and subsequent amendments intended. I know what is in the junk food being marketed, but I have no idea what has been put into beer, wine, and liquor intended for my consumption. This seems odd since alcoholic beverages are not simply the benign, empty carbohydrate convenience foods but constitute an active threat to health and a potential for addiction that can destroy entire fam-

In the advertising of such a product there should be some mention made of possible deleterious effects that can result from the product's use. Indeed such provisions are mandated by sections 54 and 55 of title 15 of the United States Code. These sections prescribe penalties for advertising a product that may be injurious to health when used under conditions that are customary or usual and for advertising that fails to reveal the consequences that may result from the use of the product. If adverse reactions to alcohol were isolated incidents, a reluctance to enforce these provisions for alcoholic beverages would be understandable. But with a present addict population of 9 million people, this country is being very lax in dealing with one of its most serious health problems. We react swiftly whenever the possibility of cancer is mentioned in connection with the consumption of a food item. And yet with this chronic problem that does not have the necessary scare appeal, we do little.

The marketing of a product such as alcohol without adequate warnings is a practice that seems foolhardy in the light of present interpretations of product liability law. Lawsuits against manufacturers result from damages much less serious than a product induced loss of job or accident, situations that frequently result from alcohol abuse. Reaction to alcohol consumption is an individual response and is unpredictable beforehand. Thus, a person purchases and consumes alcohol assuming that there will be no serious consequences and may find out too late that he or she is in some way unable to control the rate of consumption of alcoholic beverages. Alcohol advertising presents the "pleasant" uses of alcohol and gives no inkling of the possible tragic consequences that await some people who through some still unknown combination of circumstances have a predisposition toward alcohol abuse. Without a disclaimer or warning, alcoholic beverage manufacturers are leaving themselves open to 9 million lawsuits that have some chance of success in this day of increased recognition of product liability.

The Federal Government is allowing, even providing an incentive for, advertising that is in direct conflict with the law that governs food products and advertising. And since the alcoholic beverage industry seems unwilling to accept their social and legal responsibility in this area, there are now 49 of us who feel that the Federal Government should no longer encourage advertising of a product that increases the social and financial burden on our society. And there will be more when this legislation is intro-

duced again in the near future.

CHILD PORNOGRAPHY

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. MURTHA. Mr. Speaker, several Members have been working on proposals to end the use of children in pornographic films and movies.

I would like to share with the Members one step I have taken in this direction by inserting in the RECORD a letter I have written to the National Association of Attorneys General:

MARCH 29, 1977.

THE NATIONAL ASSOCIATION OF ATTORNEYS GENERAL.

Washington, D.C.

DEAR GENTLEMEN: Recently the issue of the use of children under sixteen years of age in pornography has been raised in Congress. I have introduced legislation prohibiting the use of children in such materials in the U.S. House of Representatives. Along with other members in Congress, I support legislation to provide penalties for the interstate sale of materials using children in such a manner, and penalties for child abuse laws in production

Articles dealing with this matter have been published in magazines across the nation. Newsweek carried such a story recently. The indications I have received from reading these articles is that some of the problems could be eliminated by enforcement of state laws involving statutory rape, incest, and child abuse. Certainly, if this is the case, I would urge rigorous prosecution of these violations to help end this form of child

I recognize the fact that there are difficulties in enforcing these laws. In order for me to better understand this problem so that I may help solve it through further legislation, I would appreciate information on:

(1) whether these laws can help combat

the problem;

(2) the record of state laws dealing with the problem;

(3) manpower availability for enforcing such laws.

Your cooperation in this matter is greatly appreciated.

With every good wish, I am Sincerely,

JOHN P. MURTHA, Member of Congress.

SMUT IN ITS PLACE

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. KILDEE. Mr. Speaker, in his column which appeared in the Washington Post on Friday, April 15, the distinguished columnist William Raspberry, has succinctly stated the case for the enactment of legislation to protect children from use in pornography. For those Members of the House who may have missed Mr. Raspberry's article, I include it at this point in the RECORD:

[From the Washington Post, Apr. 15, 1977]

SMUT IN ITS PLACE

(By William Raspberry)

Is there a chance that, after years of playing around with definitions, socially redeeming values and jailings, we can finally bring ourselves to do something sensible about pornography.

If I am mildly optimistic this week that we can, it is because of two eminently sen-

sible efforts.

One is a bill introduced by Rep. Dale E. Kildee (D-Mich.) to prohibit the sexual exploitation of children. The other was the anti-smut rally (April 11-13) in New York

What the two efforts have in common is that they, at long last, shelve (to the extent possible) the nonproductive question

of what pornography is and move to the more relevant one of the specific harm it inflicts.

Kildee's Child Abuse Prevention Act would make it unlawful to photograph or film a child under age 16 in any of a list of prohibited sexual acts or their simulation if there is reason to believe the pictures may be moved in interstate or foreign commerce. Punishment could range up to \$50,000 or 20 years in prison.

The target of the proposal is that most deplorable variety of pornography: "kidporn"—the sexual exploitation of children Questions of taste, First Amendment protections, the rights of consenting adults and aesthetic subjectivism don't enter into it. Child abuse, unlike the distasteful things consenting adults sometimes do to each other, warrants no social protection of any

The link with foreign or interstate commerce, of course, is simply for the purpose of bringing what would be a state matter into

the federal jurisdiction.

"We have chosen to concentrate on the sexual abuse of children rather than trying to define obscenity, because the issue is really an issue of the protection of children," Kildee said in resubmitting his bill late last month. "The courts have had a particularly difficult time arriving at a definition of obscenity. I do not think, however, that any sane person could contend that the Constitution protects an individual who abuses a child."

In addition to punishing those who photograph children, or permit them to be photographed, for sexual exploitation, the bill's sanctions would apply to those who ship through the mails, or across state lines, the prohibited materials and also to those who sell them.

That, too, seems reasonable, since the whole process from procurement to final sale can be construed as links in a single

The New York rally, involving the casts of some 25 Broadway shows, businessmen, trade unionists, neighborhood residents and clergy, moves similarly to the heart of things.

Again the questions of what consenting adults choose to do among themselves was not at issue. Indeed, the cast of "Oh! Calcutta"—considered by many to be obscene—was among the scheduled participants. Their concern is not definitions of pornography or even the banning of obscene materials. It is the harm that pornography is doing to the neighborhood.

"Censorship is not the issue here," Gerald Schoenfeld, chairman of the organizing committee told The New York Times. "The issue is the effects that these establishments (smut dealers) have on an urban center, and on residential neighborhoods in this city."

In addition to focusing on real issues, the New York rally also focused on a muchneglected aspect of the fight against obscenity: citizen outrage.

Much of the difficulty confronting the lawenforcement establishment, including the
Supreme Court, has revolved around definitions and constitutional privilege. The sponsors of the rally recognize, to their credit,
that even constitutionally protected materials can be offensive, and that those offended
by it have a right to make that offense
known.

Civil libertarians who would object to efforts to censor the reading habits of adults might find themselves supporting the objectives of SOS (for Stamp out Smut) just as they might support neighborhood efforts to get rid of garish, offensive, but constitutionally permissible, advertisements.

The Kildee legislation (which already has more than 100 co-sponsors) does not question the right of grownups to see or read what pleases them, but is based on the protection of children from exploitation.

The Times Square protesters would not question my right to produce, or your right to read, any material no matter how gross. But they insist on the right of others not to have their neighborhoods degraded by it. I find both approaches refreshingly sensible.

PROSECUTION

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. RUDD. Mr. Speaker, the indictment of former FBI Special Agent John J. Kearney has created an extremely disturbing dilemma.

The indictment alleges that while Kearney was serving as supervisor of a special task force to combat terrorist activities he and his agents broke the law.

Specifically, they intercepted and opened mail correspondence between private citizens. It is also charged that they tapped telephone wires and monitored conversations.

Special Agent Kearney was acting on orders from his superiors. We can believe the Department of Justice and the Attorney General of the United States.

The Weather Underground terrorist group was known to be responsible for the destruction by bombing of a house in Greenwich Village. These terrorists were not ordinary criminals. They were intelligent, well educated, well connected, and had access to sponsors who would provide them with financial support and conspire to keep their whereabouts a secret.

Terrorist activities, which began about 1965, reached an alltime high in 1970. Law-abiding citizens were horrified. The national convention of a great political party was demoralized. The shadow of the terror spread across the land.

Special Agent Kearney and his squad were ordered to locate and apprehend the leaders of a terrorist movement, including Bernadine Dohrn, believed to be responsible for the Greenwich Village bombing and under indictment for serious crimes.

Mr. Speaker, an editorial in the Arizona Republic, published on Saturday, April 16, adequately reviews the facts. I would like to include the editorial at this point in the RECORD:

[From the Arizona Republic] SELECTIVE JUSTICE

Bernardine Dohrn was a leader of the Weather Underground, a terrorist group which believed that by acts of violence such as planting bombs in the State Department and the U.S. Capitol, it could ignite a revolution

John J. Kearney was the supervisor of the FBI's squad 47, a special New York intelligence unit with orders to find her.

Miss Dohrn, is still at large, Kearney, now retired, is under indictment on five counts involving mail thefts and wiretapping. The Justice Department charges that he

The Justice Department charges that he committed these illegal acts in his pursuit of Miss Dohrn.

The indictment has thoroughly demoralized the special agents of the FBI, and understandably so. For this is a case of selective justice if ever there was one.

First of all, to get at Kearney the department granted immunity to all the agents under him who actually stole the mail and opened it and did the wiretapping.

Secondly, Kearney is not the department's real target. The department hopes to use him to get at higher-ups who, it believes, ordered the illegal acts, among them W. Mark Felt, once the bureau's No. 2 man, and Edward S. Miller, former head of the intelligence division.

To the Justice Department, Kearney is merely a pawn.

To the men in the bureau, his indictment raises the question: Are they or are they not supposed to obey the orders they receive from superiors?

It may be argued that violations of the law by law enforcement officers cannot be condoned. The fact is, the Justice Department has condoned violations of the law by all the agents to whom it granted immunity.

And it has condoned violations of the law by the CIA. It recently announced that it would take no action against CIA personnel for alleged illegal mall openings.

The Justice Department moreover is overlooking the political atmosphere in which Kearney and Squad 47 committed the alleged crimes for which Kearney is being prosecuted.

It was a time of terror, when Miss Dohrn and her associates were exploding bombs all over the country. One of them, which exploded by accident, leveled a home in Greenwich Village, leaving not a brick standing and killing three persons.

Weatherpeople, as they called themselves, were staging riots on university campuses and rampaging through Chicago, smashing shop windows.

The FBI had the duty to bring the culprits

Certainly this should be considered a mitigating factor in whatever crimes Kearney may have committed.

In pardoning the Vietnam War draftdodgers, President Carter took into consideration the political atmosphere in which they had violated the law.

The same should be done in the case of John J. Kearney.

Mr. Speaker, I am not condoning the breaking of the law. I am pleading that this entire case be considered in its true and proper context.

No innocent citizen was injured or embarrassed by the activities of Special Agent Kearney and his squad.

Had these terrorists been ordinary street criminals, the FBI could have turned to their always accessible informers. But the Weather Underground represented a new breed of criminal—people who used terrorism for a political purpose.

It should be noted that former Attorney General Edward H. Levi decided in January not to prosecute CIA officials for opening citizens' mail from Communist countries.

I do not underrate the Communist threat, but if in this case the CIA was justified in operating a mail interception cover, what torturous logic can support the conclusion that Special Agent Kearney must be prosecuted for carrying out the orders of his superiors in pursuit of a group of fanatics who had demonstrated their willingness to commit murder and other violent crimes in pursuit of their efforts to demoralize and disrupt the civil peace of the people of the United States?

Every policeman, every deputy sheriff, every agent of the FBI, risks death on a

daily basis to protect the peace of the

Actions such as this present indictment will destroy the citizens' only weapon against crime—the ingenuity and the dedication and the courage of our law enforcement agents.

To my mind, the double standard displayed in this instance suggests a schizoid mentality. Make no mistake about this-when we the people, when we the citizens, refuse to employ the same degree of force against those criminal elements out to destroy us, which they are prepared to use against us, we will have lost the war to keep the peace and anarchy will prevail.

Mr. Speaker, I have today asked the Attorney General of the United States to personally review this indictment of Special Agent Kearney, and to stop arbitrary judicial action that threatens to demoralize and undermine our entire law enforcement effort.

I include my letter to the Attorney General at this point in the RECORD:

HOUSE OF REPRESENTATIVES Washington, D.C., April 19, 1977.

Hon, GRIFFIN B. BELL. Attorney General of the United States, U.S. Department of Justice,

Washington, D.C.

DEAR MR. BELL: I am most disturbed and concerned by the Justice Department's indictment of John J. Kearney, a former special agent for the Federal Bureau of Investigation. I must ask that you seriously review this action in light of the injustice through the application of a double standard in this

Special Agent Kearney was acting under the specific orders and directions of his superiors to locate and apprehend dangerous terrorists of the Weather Underground, who were responsible for a series of bombings and other violence during the late 1960s and early 1970s.

I ask you personally review this matter. I am sure that your examination of internal memoranda and documents in this case will show that the mail cover operation and wiretaps operated by Special Agent Kearney had the personal approval of several direct superiors, perhaps including the U.S. At-torney himself whose office has now sought the indictment against Kearney.

Under these circumstances, a loyal and dedicated FBI investigator acting under direct orders should not now be prosecuted, especially in light of recent Justice Department policy in connection with other intelligence-gathering activities.

As you know, Attorney General Edward Levi decided in January not to prosecute Central Intelligence Agency officials who had opened citizens' mail from Communist countries to gather needed intelligence information

This policy decision should certainly be of equal applicability in the case of Special Agent Kearney, whose orders were to conduct specific investigative actions to locate and apprehend fanatical terrorists, who had demonstrated their willingness to commit murder and other violent crimes.

I certainly do not condone the breaking of any laws by government officials. However, if new standards now apply and policies have been changed under the new administration with respect to law enforcement, such standards and policies should not be made retro-active to prosecute dedicated law officers whose actions several years ago were con-sidered legitimate and necessary for the circumstances that threatened innocent citizens throughout our population.

I urge you to take whatever administrative action is necessary to implement new policies under the law. But I strongly urge you not to allow continuation of arbitrary judicial action against former dedicated federal investigators, which runs the risk of demoralizing and weakening our entire law enforcement effort.

Most sincerely.

ELDON RUDD, Member of Congress.

A STRONG VOICE FOR CHILDREN

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. BRADEMAS. Mr. Speaker, the well-being of America's children concerns us all. Indeed, I believe there is wide agreement on the critical importance to later development of the early years of human life. Because we care about children, we cannot ignore the maltreatment and neglect of children caused by abusive adults. Nor can we turn our backs on the hundreds of thousands of foster care children who are locked away into situations meant to be temporary rather than permanent. America's children and their families deserve the opportunities for the kind of cognitive, psychological, nutritional, and emotional growth that we know to be essential to the lives of children.

Dr. Edward Zigler, the speaker, professor of psychology at Yale University, is one who has worked long to make possible for American children a better chance

in their early years.

He speaks with authority and compassion on behalf of children and families in this country. As the first director of the Office of Child Development in the Department of Health, Education, and Welfare, Dr. Zigler is keenly aware of the importance of a vigorous voice for children in the Federal Government.

Last month, Dr. Zigler spoke in New Orleans to the Society for Research in Child Development on the need to strengthen the Office of Child Development as the advocate for children throughout the Nation.

Mr. Speaker, I insert in the RECORD a text of Dr. Zigler's remarks on that occasion:

WHO WILL SPEAK FOR CHILDREN AND FAM-ILIES? A CASE FOR STRENGTHENING OCD*

(By Edward Zigler)

How are children and families faring in America? The list of social indicators adds up to a national outrage. Does it really make any sense that the richest nation on the face of this earth should rank 13th among industrialized countries in its infant mortality rate? What about the rapidly rising incidence of teenage pregnancies, a situation that bodes ill for both parents and children? As for the incidence of child abuse, our best estimate is one million cases of child abuse annually. One million cases. Then, as we wonder and bemoan the rising juvenile de-linquency rate, we leave one million eight hundred thousand latch-key childrendren eight, nine, ten years old-alone during the day. If we do not care enough for our children to provide them with even minimal adult care, then we deserve exactly what we are getting.

What can we do to reverse this depressing spiral? There are two conditions that must be met if we are to improve the lot of children and families in America. First, we must develop a strong and vocal lobby in behalf of children and their families. This we do not have, and the myth that we are a child-oriented society has actually stood in the way of establishing such a lobby.

Second, we need a strong and effective federal agency that can be the focal point for developing and implementing social policy for America's children and their families. As the first director of the Office of Child Development, I can say that, in my estimation, OCD is not working, and it is not effective. But that does not mean we should abandon OCD in favor of a Cabinet-level department of children. A new agency would fragment programs still further, and the problems of coordinating with other departments would continue. We have OCD; we should build on it, instead of chasing after cabinet rainbows.

MAKING OCD EFFECTIVE

What must we do to make OCD into an effective agency for families and children? We should start by legislating OCD making it permanent. OCD was established by an executive order almost a decade ago, and to this day it has not been legitimized by an act of Congress. As a result, OCD could go out of existence tomorrow, if the powers that be so chose. They could send Head Start in one direction, put the Children's Bureau back in the basement, and hope that nobody would be watching, which usually turns out to be the case.

In addition to legislating OCD, Congress should broaden the agency's focus beyond the preschool childhood years. OCD was established in part because President Nixon once made a speech that we must be concerned about the first five years of life. When he was later asked, "Hey, what happened to the first five years of life?" he answered, "We established the Office of Child Development." That focus is far too narrow. This agency should be the focal point not only for preschool children but for all this nation's children up to the age of eighteen who together constitute over one-third of the U.S. popula-

Furthermore, OCD should have an ever, broader charge. To make sound policies for children, we must make sound social policies for families. The Congress should therefore rename this agency the Office for Child and Family Development. The director should be appointed by the President and confirmed by the U.S. Senate. This would at least correct the current paradoxical situation whereby the Chief of the Children's Bureau, a presidential appointee, works for the director of OCD, who is not a presidential appointee. Although this situation is currently handled by having the OCD director also serve as the Chief of the Children's Bureau, the jobs are too big for one person to wear both hats.

A STRONG DIRECTOR FOR OCD

The proposed Office of Child and Family Development can be no stronger than the person who is recruited to head it. It is no secret that a new OCD director is presently being recruited, and I am not impressed with the recruiting that is going on. Two things have rendered this recruiting job unnecessarily difficult. First, the director of OCD answers to an Assistant-Secretary, rather than to the Secretary of HEW. From personal experience, I feel that the few small victories I won during my stay in Washington were in large part due to the fact that I dealt directly with the Secretary of HEW. It's not

^{*} This is a condensation of a speech delivered to the Society for Research in Child Development, New Orleans, March 16, 1977.

just a matter of whom you have coffee with; it's a signal to everybody else of the im-

portance of what you're doing.

Now, the minute they moved OCD down one step they made that office less attractive to leading figures who might be interested in the job today. That's exactly what happened to the Children's Bureau. They moved it back a step at a time until you couldn't even find it any more, and two more steps down I don't think you're going to find the Office of Child Development anymore either.

The second thing which has rendered the recruiting process more difficult is the politicizing of the Office of Child Development. The cavalier, "Be-out-by-noon" dismissal of the second director, John Meier, was shoddy to say the least. The director of the Office of Child Development is a spokesman and advocate, a knowledgeable person who should not be treated like a political hack. Rubbing further salt in OCD's wounds, the administration, while treating the OCD director in this way, was taking bows for not firing the director of the National Institutes of Health, saying, "See, we've taken health out of politics." And I say to the present admiinstration, 'Great, now do it for children, too."

Furthermore, I think in its efforts to re-cruit a new OCD director, HEW is paying too much attention to window-dressing and too little to substantive qualities, such as finding a person who has considerable knowledge of child development as well as administrative skills and the temperament to be effective in

Washington.

Now, it may be too late to have the OCD director formally answer to the Secretary of HEW as opposed to the Assistant Secretary for Human Development, as is currently the case. But an informal mechanism could be set up whereby the OCD director, or the Chief of the Children's Bureau, could also serve as the special consultant to the Secretary of in regard to all of the Department's work in child and family life. There's a precedent. Dr. Bertram Brown of the National Institute for Mental Health served as a special consultant to the Secretary on all matters related to drug abuse. In any case, we need to find some mechanisms whereby the advocacy needs of America's children gain the ear of the Secretary of HEW.

THE JURISDICTION OF OCD

Now I would like to give you my own vision of an Office of Child and Family Development. It would have three types of activity. First, it would have a critical mass of programs. I am familiar with Gilbert Steiner's criticism that OCD is an agency without a program. Although I think his criticism is misdirected, I do agree that no agency survives very long unless it has enough programs and supporting funds to affect significant numbers of people. We must have more programs in OCD. The agency should be charged with coordinating all child and family matters, including the over 200 children's programs now divided across dozens of agencies. Second, OCD should serve as the nation's advocate for children and families

In regard to administering programs, OCD should be responsible for at least three large programs—Head Start, Title XX day care and the Maternal and Child Health programs. Head Start continues to be a vulnerable program. As I travel about the country I find Head Start people turning their energies away from children to speculate, "Gee, I wonder what the application forms from the Office of Management are going to look like, when they move it over there?" I would like to see the Secretary of HEW put an end to such speculation immediately. That is, he should announce clearly and forcefully that Head Start will remain in the Office of Child Development. Head Start has fared well in OCD, well enough to serve as a national laboratory for many child care programs. The Office of Education has no comparable ex-

perience in early childhood programs to suggest its merits for administering Head Start. HEAD START

Now, I want to say a few more words about Head Start, because I am afraid the program

terribly misunderstood. In fact, misunderstood that both the Associated Press and the New York Times have announced in print that the Head Start program is dead.

Now, since I did not wish that to become a self-fulfilling prophecy, I decided to write the following letter to the New York Times:

"The New York Times erred in its assertion that Head Start is dead. (Editorial, December 27, 1976). Head Start, the most innovative program ever mounted in behalf of America's children, is alive and well. Your mistaken assertion is illustrative of the misunderstandings, controversy and confusion that have surrounded the Head Start program since its inception over a decade ago. At a cost of over 400 million dollars per year the Head Start effort continues to provide a preschool educational program, enriched by a broad spectrum of social services, to over 200,000 of America's economically disadvantaged children. Furthermore, over the years the Head Start program has proven to be a valuable national laboratory for the development and assessment of a whole array of intervention efforts, such as the Home Start program, efforts relevant to the optimal development of all of our nation's children.

"Your editorial was correct in indicating that Head Start is a vulnerable program that has suffered many trials and tribulations. The history of this program has been one of moving from crisis to crisis with Head Start peoat the local level never feeling very confident that they would receive the following year's funding. Particularly detrimental to the Head Start program has been that coterie of psychologists, early childhood educators and social policy analysts who have regularly, albeit erroneously, proclaimed the failure of the Head Start program. However, those Americans closest to and therefore most knowledgeable about Head Start namely those American families whose children utilize it, have never wavered in their praise and support of the program. Head Start has continued to be funded because a bipartisan group in Congress has refused to turn a deaf ear to that relatively powerless segment of society that has always been Head Start's most fervent champion.

What of Head Start's future? It remains problematic. For this reason the Head Start program needs the active support of all those who feel that no national effort should take priority over the healthy development of our

nation's children."

The conventional wisdom about Head Start is currently that there are some early gains that vanish. It is my considered opinion that that point of view will ultimately be proven more conventional than wise. If Head Start is appraised in terms of its success in universally raising the IQ's of poor children, the program may appear an abject failure. On the other hand if one assesses Head Start in terms of the improved health of tens of thousands of poor children, Head Start is clearly a resounding success. Whatever yardstick we are going to use to measure Head Start, there should be a moratorium on assertions concerning either the success or failure of Head Start until the new data presently being analyzed are in.

TITLE XX DAYCARE

In addition to Head Start, OCD should administer Title XX day care, the largest federally funded day care program. In a typical example of bureaucratic nonsense, while OCD is theoretically charged with guaranteeing the quality of Title XX day care, fiscal control is vested in the Community Services Administration of HEW. A territorial struggle for control of Title XX is likely, and I think OCD is the only agency in Washington whose

primary concern is that day care benefit children, rather than that it reduce welfare rolls or serve as a public employment program.

CHILD HEALTH CARE

The third major program that OCD should administer is the Maternal and Child Health program, which was moved to the Health Services Administration at the time of OCD's formation. The Maternal and Child Health program, if it were moved back to OCD, could relate health services to Head Start, day care, and a variety of children's programs. However, because the Maternal and Child Health program is such a large and important effort it should constitute a separate bureau within OCD rather than be placed back in the Children's Bureau.

IMPROVING THE CHILDREN'S BUREAU

Finally, within OCD I would like to see the Children's Bureau revitalized, and I think it can be, with the plan I have laid out. The Children's Bureau has served as our nation's conscience in regard to children and families for over 60 years. Critics of the Children's Bureau are correct that the agency has not been as militant and as effective in its advocacy as many of us would like. However, that must be remembered is that the Children's Bureau became what decision makers made it. As children and families dropped in the priority lists of our nation's decision makers, so the impact of the Children's Bureau dropped with it.

What must be emphasized is that the Children's Bureau remains the best repository of knowledge about children and families we have. Instead of criticizing the Children's Bureau for what it has not done, it is only fair to look at what it has done. The Children's Bureau continues to work diligently to develop social policies toward keeping families intact and guaranteeing the right of every child to a permanent home. The Bu-reau is doing good work to promote adoption of children who would otherwise remain adrift in foster care. It is also promoting the expansion of 24-hour comprehensive emergency services to families in crisis, the kind of local community service that could prevent many children from being removed from their families in the first place

To broaden the impact of the Children's Bureau, the bureau should be given new and important tasks. First, the Children's Bureau should be given the power of the purse strings necessary to enforce the charge already given to it, namely to guarantee the quality of day care subsidized with federal funds. Second, the bureau's efforts in the child abuse area remain minimal and must be enhanced. The Children's Bureau would also be a good place to establish a muchneeded center to study the effects of children and families. Finally, the Children's Bureau is the appropriate setting in which to conduct family impact analysis of other na-tional policies. Both President Carter and Vice President Mondale favor such a procedure in which every federal directive in policy would be analyzed for its impact on family life. The Children's Bureau is the logical agency to do this.

A STRONG CONSTITUENCY FOR CHILDREN

To summarize then, I am calling for a legislated Office of Child and Family Development that would have three major operating programs and a Children's Bureau, with an outstanding leader responsible for coordination and advocacy on behalf of families. Why should we strengthen OCD rather than make a Cabinet-level department for children? Because, it is unwise to give up something we have, that we could build upon, for something that we might like to have. The idea that a super agency could solve all our problems has been around for a long time, and has often served as a substitute for genuine commitment and action on behalf of children and families. Just after I became director of OCD, I went to the White House Conference on Children. I was running around saying, "Hey, would you like to help me establish the Office of Child Development? It's just getting going, I could sure use your help." They were saying, "We want a Cabinet-level agency." And I was saying, "Well, that would be great, but why don't you help me with what we have right now?" And that's where I think we should put our energies today.

Now, in conclusion, I want to say that child advocates must not be lulled into a false sense of security by the nomination of Vice President Mondale and by the election of Carter and Mondale. We said, "Well, if Carter and Mondale are in power, all will be right with America's children and families." Do not mishear me. I do believe these leaders have a positive orientation towards the problems of family life in America. However, the new administration obviously has many con-cerns and priorities. Thus, it is important that we do all we can to build an independent power base in the Congress around such leaders as John Brademas and others. should continue to speak out on those issues that concern us and do everything we can to improve the lot of America's children and families.

THE NATIONAL TAXPAYERS UNION REJECTS H.R. 10, HATCH ACT REFORM

HON. GENE TAYLOR

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. TAYLOR. Mr. Speaker, according to a newsstory appearing in the Federal Times, April 18, the National Taxpayers Union has sent letters to Representative William Clay, chairman of the Subcommittee on Civil Service, and Senator Abraham Ribicoff, chairman of the Senate Governmental Operations Committee, warning that H.R. 10, and a similar bill in the Senate, S. 80, offer no solution and could prove "an administrative or political disaster."

The story reports that the National Taxpayers Union research director, Sid Taylor, said that "opening the floodgates for political activity within the Federal Establishment is clearly not in the interests of the American taxpayer, good government, or career-integrity for Federal employees."

The arguments advanced by the National Taxpayers Union against enactment of the so-called Hatch Act Reform proposals are convincing and valid, they deserve the careful attention of my colleagues.

The article follows:

NTU HITS HATCH ACT REFORM

The National Taxpayers Union objects to amendments or repeal on the Hatch Act, which prohibits participation by federal employees in partisan political activities.

The organization is particularly critical of a proposed bill—HR 10, The Federal Employees' Political Activities Act of 1977—as well as similar Senate legislation, S 80.

well as similar Senate legislation, S 80.

According to NTU, the proposals carried in these bills offer no solution and could prove "an administrative or political disaster."

NTC's position on this matter was spelled out in letters to Rep. William L. Clay, D-Mo., chairman of the House subcommittee on civil service, Sen. Abraham Ribicoff, D-Conn., chairman of the Senate Governmental Affairs Committee.

NTU research director Sid Taylor said that "opening the floodgates for political activity within the federal establishment is clearly not in the interests of the American taxpayer, good government or career-integrity for federal employees."

"Removing Hatch Act limitations on the political activities of career federal officials, executives, managers, supervisors and employees will create entirely new levels of administrative confusion, conflict of interest and corruption," Taylor said.

He added that the removal of such limitations would increase employee-management litigation and employee grievance case workloads throughout government—and would result in lowered employee morale, increased paperwork, diverted manhours and reduced work productivity.

Taylor contended too that the proposals would create "an entirely new federal bureaucracy in the form of a requirement for administrative law judges—possibly 50 or more judges at \$30,000 a year and up—merely to adjudicate alleged violations of the law."

The NTU also charged that there already exists "considerable political influence" within the federal government and accused the Civil Service Commission of not yet having established control over abuses in federal hiring, merit selection, recruitment practices, grade inflation or "buddy system promotion malpractices."

"These are all done at taxpayers' expense," he said. "Apparently, the Department of Health, Education and Welfare, for example, is about to be converted into an Old Soldiers Home for double dippers."

"These kinds of violations, abuses or malpractices would be tripled when political activities are added to the federally so-called merit, competitive selection, equal employment opportunity, process," Taylor said.

A CONDITION THAT NEEDS CORRECTING

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. JACOBS. Mr. Speaker, this story by Wendell Rawls, Jr. in the New York Times illustrates eloquently a condition that needs correcting by the Congress: 150,000 Get U.S. Salary as Well as Military

PENSION
(By Wendell Rawls, Jr.)

Washington, April 4.—About 150,000 re-

tired military personnel are working for the Federal Government, receiving both salaries and pensions in a practice that has come to be known as "double-dipping."

That figure represents an increase of 83 percent in the last three years, and it means that one of every seven retired military people now holds a Federal civilian job.

At a town hall meeting in Clinton, Mass., two weeks ago, President Carter joined the growing opposition to the practice by saying that he thought it was unfair to the taxpayers "to have someone go into the Army or Navy at the age of 21 and serve 20 years and retire at the age of 41, draw a substantial retirement benefit and then get a full-time lob working for the Federal Government."

job working for the Federal Government."
"It is called 'double-dipping' and I think it ought to be eliminated," he added.

The sharp increase in the number of "double dippers" in recent years appears to result from a combination of factors: Removal of restrictions on drawing dual compensation

from the Government, a growing number of retirees, difficulties of the retirees in finding jobs in the civilian economy, and a littlenoticed "buddy system" under which military officers and enlisted men find jobs for their colleagues as they retire.

The House Post Office and Civil Service Committee is investigating the practice and plans to hold hearings in about a month. Its investigators have discovered that the number of double-dippers is greater than the 141,817 reported in a recent study by the United States Civil Service Commission.

That study was based on 1975 statistics that did not include military retirees who are Congressmen, or those employed on White House and Congressional staffs, in the Central Intelligence Agency, the National Security Agency, the Tennessee Valley Authority, the Federal courts or the Board of Governors of the Federal Reserve.

According to the study, almost 80,000 retired military people have civilian jobs in the Defense Department and 35,000 others work in the United States Postal Service. The Veterans Administration employs 7,288 retirees, the Department of Transportation 3,585, the Treasury Department, 2,939, the General Services Administration 2,280 and the Department of Health, Education and Welfare 2,078

According to a House committee source, the average income of the retirees, combining salary and pension, exceeds \$20,000 a year. But for a group of 5,000 former regular officers, the average in 1975 was \$34.372.

Almost 1,600 military personnel "retired" to Federal jobs with salaries of more than \$30,000, and 800 of them have Federal jobs paying more than \$36,000 a year. For about 20 generals and admirals, the combined salary and pension in 1975 was more than \$65,000 a year. By comparison, the annual salary of the Vice President in 1975 was

From 1894 to 1964, there were limitations on how much military retirees could earn in combined salary and pension when they took civilian jobs in the Government. Over that period, the ceiling rose from \$2,500 a year to \$10,000. The military retirement plan provided that the pension benefits accrued at the rate of 2.5 percent of base pay for each year of service, and that a person could retire after 20 years with a pension equal to 50 percent of his highest base pay, or after 30 years with 75 percent of base pay.

Military personnel unlike participants in almost all other pension systems, public or private, do not contribute to their retirement fund. And a person who leaves the military with less than 20 years' service and enters the Federal Government in a civilian job for at least five years can add his military and civilian service time and retire with a pension computed on the total years of Government employment.

By contrast, Federal civil servants cannot retire with full pension until they reach 62 years of age or complete 30 years of service. They contribute 7 percent of their salaries to a pension fund. If they retire, then return to Government service, they forfeit their pensions.

The military's arrangement comes out of the Dual Compensation Act of 1964, which repealed the \$10,000 limit on combined pay and pension for military retirees who took civilian jobs in the Government. The reason given lifting the ceiling was that pay scales and pension benefits had climbed to such a point that many military retirees were losing some of their pension benefits. A \$50,000 ceiling was proposed, but it was rejected in favor of no limit at all.

EXCEPTION FOR OFFICERS

The lone exception was for retired "regular officers" who entered Federal service. They were restricted to receiving a set portion of their pension, now \$4,045.16, plus half of the balance. For example, Herbert Hetu, a 47-year-old retired captain, was a regular officer in the Navy whose pension is computed on 27 years of military service. He was recently named Assistant Director of Central Intelligence for public affairs, overseeing a staff of eight people, at a salary of \$47,500 a year. His gross pension is \$23,463.96 a year. But while he is working for the C.I.A., he may retain only \$13,754.52 of his pension, which, added to his salary, gives him an income of more than \$61,000 a year.

About 5,000 of the 150,000 military retirees in Federal civilian jobs were regular officers and warrant officers. The rest were reserve officers, reserve warrant officers or enlisted

As of June 1975, about 8,000 military retirees in civil service were younger than 40. About 65,000 were between 40 and 50 years old, and 58,673 were 51 to 60 years old.

Almost 80,000 of the retirees returned to civilian jobs in the Defense Department, doing work similar to what they had done in uniform. Generally, the retiree was aided in getting his civilian job by friends and higherups in the military. This is a process that has become known as the "revolving door," using a loophole in the Civil Service regulations called the "unassembled exam."

Here is how the loophole can be exploited:
A person facing military retirement decides in what Civil Service category he wants to be qualified. He prepares a statement of his qualification, sends it to the Civil Service Commission and is placed on the Civil Service register. His friend or superior officer prepares a "job sheet," which is a statement of the duties and requirements of a civilian job, tailoring it to the qualifications of the retiree.

A Civil Service personnel officer submits to the hiring officer a list of the top five candidates who meet the job specifications. The hiring officer can choose among the five, and he often chooses his friend.

Theoretically, the military retiree must wait 180 days before entering a civilian job in the Defense Department. However, the hiring officer can persuade the Civil Service Commission that his needs are urgent or that he needs an expert, specialist or consultant immediately. In fact, it is possible for a man to retire on Friday and return to his job on Monday as a civilian.

"The name of the game is to match up your qualifications with the job requirements," said one retiree in the Defense Department. "Sometimes it is handled so adroitly that a job opening is announced and the job is already filled."

This scenario applies only to civilian jobs from G.S. (Government Service) Level 7 to G.S. 18, the highest Civil Service level. Below G.S. 7, jobs are filled on the basis of examinations. And even there military veterans get grade-point bonuses that give them an

The military retiree has other advantages over other retirees, too.

Every year, he receives two pay raises, one through the built-in cost-of-living increases in his pension and the other through Civil Service salary increases. He also maintains his commissary and Post Exchange (P.X.) privileges, which enable him to buy food and other goods at a discount, and he gets free medical and dental care. When he retires from his civilian job, he can collect a Civil Service pension as well as his military pension, and after age 65 he gets Social Security—a triple dip.

curity—a triple dip.

Meanwhile, the military pension fund has a projected deficit of about \$200 billion, and the 55 other Federal Government pension funds have projected deficits that total \$350 billion. The Social Security fund has a deficit of more than \$4 trillion.

Sidney Taylor, a civilian retiree who has waged what amounts to a one-man war on double-dipping as researcher for the National Taxpayers Union, a small citizen lob-

by, says that he is not opposed to the hiring of retired military personnel by the Federal Government. He is, though, opposed to paying them both a salary and a pension while they are working. He has succeeded in getting some double-dipping Congressmenfor instance, Representative John J. Rhodes, Republican of Arizona—to return their pensions to the Federal treasury, and others—among them Senator Barry Goldwater, Republican of Arizona—to give their pensions to charity.

But there were 38 double-dippers in the last Congress, so military retirees have a strong lobby, and they are on record as opposing any change in what they regard as the Government's contractural obligation to them.

Traditionally the generous pension plan for the military offset the low salaries and was a strong incentive to keep people in military service. Today, the pay scales for the most part compare favorably to those in the civilian sector, the pension is virtually incomparable. Double-dipping after retirement from the military, the study by the Civil Service Commission makes clear, has become a lucrative way of life that attracts thousands of retired military personnel each year.

MANDATORY SENTENCING—CRIME CONTROL, NOT GUN CONTROL

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. ANDERSON of California. Mr. Speaker, my constituents are writing me each day apprising me of the increasing levels of crime in our cities and neighborhoods. They ask me: "What are you doing about this, Congressman?"

I write back and tell them about H.R. 1559, a bill to provide a minimum mandatory prison sentence of 5 years for anyone convicted of committing a Federal crime with the use of a firearm. The scenario then goes like this:

A. The constituent writes back supporting the bill and hopeful for its prompt passage.

B. Weeks pass and turn into months.
C. The constituent writes again, asking to be brought up to date on the progress of the legislation.

Then, Mr. Speaker, I am forced to reply that the committee with jurisdiction in the matter has not yet made any commitments regarding the measure and that I will keep them advised of its progress.

How long can I continue to tell my constituents this same thing, over and over and over. The time is long overdue to report this simply worded, yet decisively effective measure. It is time to create an atmosphere in which a criminal will clearly know that if he commits a crime with the use of a firearm and is convicted, then he is going to jail for 5 years. The judge would have no other option than to send him to jail. H.R. 1559 would be the law.

Mr. Speaker, I urge those Members of this House of Congress who have not as yet cosigned this bill to do so. Our constituents speak daily in support of this legislation. It deserves a serious consideration.

I include the following:

THE DISTRICT ATTORNEY,
County of Fresno, March 10, 1977.
Hon. Glenn M. Anderson,
U.S. Congress,
Washington, D.C.

DEAR CONGRESSMAN ANDERSON: I received your recent letter regarding HR 1559. In the last couple of years there seems to

In the last couple of years there seems to have been some activity in the field of criminal law that I would like to see take on the form of a ground swell. This activity is activity directed toward the strengthening of the criminal laws and the imposition of harsher sentences where certain types of crimes are involved. It is encouraging to see people such as yourself introducing legislation which will accomplish these ends.

It seems clear to me that the weight of public opinion in California as well as elsewhere around the country is heavily in favor of laws which will enable the justice system and penal systems to detain certain types of criminals in custody for a longer period of time thereby protecting society which has been consistently victimized by these criminals. When we talk in terms of the criminal using a firearm for the purpose of committing a crime we are talking about a violent crime being committed by a person who is violent or who certainly has all of the potential for violence.

I have personally read thousands of cases coming down from the appellate courts involving appeals by defendants convicted of crimes. In virtually every one of these cases constitutional rights are discussed. In none of these cases have I ever heard any appellate court justice or supreme court justice speak in terms of the constitutional rights of the victims of the criminals. It is my contention that every citizen in this country has an inalienable right to personal security. This is a right that those of us in government have all too often ignored. Along with that right of personal security is the right to demand that the government and its agencies protect that right as jealously as it protects the rights of the criminals who violate these rights.

I feel that your proposed legislation is needed and thank you for your efforts.

Very truly yours,

WILLIAM A. SMITH, District Attorney.

CITY OF COVINA, Covina, Calif., March 10, 1977.

Hon. Glenn M. Anderson, House of Representatives, Washington, D.C.

Six: Persons who fulfill personal greed or desires by jeopardizing the lives and health of other people belong in prison.

Citizens in many parts of this country are imprisoned in their own homes, imprisoned by fear of the violence on the streets outside.

I am very pleased with the intent of your proposed legislation to provide stiff mandatory sentences on those who use firearms in the commission of federal crimes. I believe it is the proper role of the federal government to provide the example to the rest of the nation that we will not tolerate this horrendous trend any longer.

I thank you for your efforts and pledge my full support on this legislation.

Sincerely,

MICHAEL J. O'DAY, Police Chief.

CITY OF PASADENA, Pasadena, Calif., March 11, 1977.

Re H.R. 1559. Hon. Glenn M. Anderson, House of Representatives, Washington, D.C.

It is encouraging to see your bill making progress in the House of Representatives.

For too long, the pleas of law enforcement have gone unheeded while deadly criminals stalk freely and plunder. The endless argument over gun control legislation has accomplished little but to muddy the waters of the real issue-that being whether or not a criminal should face mandatory punishment for using a gun during the commission of a crime.

Your bill would go a long way towards eliminating great disparities that exist in each state in regard to sentencing convicted felons. It seems that each area of the country treats the armed felon differently, often encouraging the criminal to use a weapon because he is confident that little will come of this deadly force.

H.R. 1559 faces a serious question with an

equally serious answer, removing all doubt and possibility that extenuating circumstances somehow will allow a criminal to walk free after committing a crime with a

The citizens demand such action, having suffered in recent years from a multitude of lenient sentencing practices that seem to ignore victims in favor of the rights of the convicted criminal.

Your bill places the burden of responsibility squarely where it belongs: on the shoulders of the criminal who has the option to use or not use a gun during the commission of a crime.

While many sentencing practices have been tried and proven not too successful in deterring crime, the one thread of hope for law enforcement and the public has been the certainty of punishment.

Length of a sentence, while it may hold some fear for a potential criminal, has been so castrated by the criminal justice system that the only remaining hope for us all is to insure that a convicted criminal will at least be forced to spend some time away from the society he plunders, giving some respite from vicious behavior.

It is time that crime victims' rights are upheld and those of the criminals modified back to reality.

Your bill deserves the fullest support of all law enforcement, and I personally pledge to assist your efforts in any way possible.

Hopefully, your colleagues in the House of Representatives and Senate share your concern for the human rights of our citizens and will take this opportunity to demonstrate their beliefs by joining with you in the passage of this fine legislation.

ROBERT H. McGOWAN, Police Chief.

CITY OF EL SEGUNDO, El Segundo, Calif., March 16, 1977. Hon. GLENN M. ANDERSON,

Long Beach, Calif. DEAR CONGRESSMAN ANDERSON: This department is in receipt of your letter dated February 28, 1977 and it has been reviewed

by my staff and I.

As a concerned law enforcement administrator, I whole heartedly support your bill anticipating that it will serve in the best interest of justice and provide a specific measure to address the issue of violent crimes committed with the aid of firearms. It is through the concerted efforts of legislators such as yourself that we can someday refocus our attention to the victims of these serious crimes and that the perpetrators will receive

swift and just penalties for their actions. Please be assured of my personal support in any future matters in this regard. Sincerely,

J. H. JOHNSON, Chief of Police.

COUNTY OF SAN BERNARDINO, San Bernardino, Calif., March 16, 1977. Re H.R. 2004 Hon. GLENN M. ANDERSON, House of Representatives,

Washington, D.C.

Dear Sir.: Thank you for allowing me to comment on your proposed legislation to take a hard line on people who commit fed-

eral crimes with a firearm. Although my office cannot prosecute federal crimes, we have some information which may be helpful.

In the abstract, most people will agree with the concept of law requiring prison for people who commit felonies with firearms. However, on a case-by-case basis, many situations arise where judges will simply not do it. There are a great many nonviolent federal felonies, i.e., theft of mails, counterfeiting, Dyer Act violations, smuggling of aliens, where a person may be carrying a firearm. Where the offender is relatively young, or quite old, or has an infirmity looked upon with great sympathy, a judge can use other methods to get around the mandatory prison requirement

However, in the long run your Bill will assist federal agents in placing dangerous persons in custody rather than back on society on a probationary status. If the Bill were confined to use of a firearm, omitting carrying a firearm, the Bill would receive better judicial support, thus eliminating some of the ways of "getting around" mandatory sentence legislation.

Sincerely.

JAMES M. CRAMER, District Attorney.

CITY OF GLENDORA, Glendora, Calif., March 17, 1977. Hon. GLENN M. ANDERSON, House of Representatives,

Washington, D.C.

DEAR SIR: I am writing to express my complete support for H.R. 1559 involving the minimum mandatory prison sentence for anyone convicted of committing a federal crime with the use of a firearm.

As you are aware, the crime rate in the United States has climbed continuously over the past 20 years and the incidence of violent crimes involving weapons has increased at a higher rate than crime in general. We have been involved in social experimentation during the last 20 years which has proved to be a failure and which has allowed criminals "be rehabilitated within their own neighborhoods.'

It is time that the criminal justice system put a stop to the use of firearms in the commission of crime by saying to the potential criminal we will not tolerate this. It is my opinion that we can only accomplish this by unequivocable stern action for those who commit crimes. Therefore, please be assured of my complete support for this bill which you have introduced.

Sincerely,

OLIVER B. POSEY, Chief of Police.

COUNTY OF MONO, Bridgeport, Calif., March 18, 1977. Hon. GLENN M. ANDERSON, Rayburn House Office Building, Washington, D.C.

DEAR SIR: In response to your letter of February 18, 1977, this is to inform you that we concur with the articulate statements of Ferris Lucas.

Sincerely,

N. EDWARD DENTON, District Attorney.

CITY OF MANHATTAN BEACH, Manhattan Beach, Calif., March 21, 1977. Hon. Glenn M. Anderson, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN ANDERSON: In my twenty-five years in law enforcement, it has been a source of amazement that crimes involving the use of firearms have burgeoned. It is my personal opinion the reason for this is that either the laws concerning such use, or the courts' application of such laws, are not strict enough to have a significant deterrent effect.

While it is true that in many areas of criminal activity, laws in general may not have a deterrent effect due to the nature of the acts; the laws involving use of firearms in crimes, however, most definitely would have a deterrent effect. I say this because with the exception of crimes of passion there is obviously a period of deliberation involved when a person arms himself and sets out to commit a crime.

At the risk of oversimplification, it would seem obvious that a strict law which the courts would be obligated to adhere in sentencing would most certainly have an impact on the problem of felonious crimes being committed by persons armed with firearms.

I most heartily endorse H.R. 1559 and commend you for your efforts in regard to this legislation.

Sincerely.

HUGH A. O'BRIEN, Chief of Police.

SAN FRANCISCO. March 21, 1977.

Hon. GLENN M. ANDERSON, Rayburn House Office Building, Washington, D.C.

DEAR CONGRESSMAN ANDERSON: I am gen-erally in support of the concept of mandatory imprisonment for persons convicted of crimes committed with firearms. It is with some reluctance that I extend my support to such a concept because it is my firm belief that measures which altogether proscribe the exercise of judicial discretion are generally antithetical to the best interests of a fair judicial system. One need not con-template for too long to envision situations in which the imposition of a mandatory imprisonment sentence would do a manifest injustice both to a specific defendant and to

the larger society as well.

Nevertheless, the failure of the criminal justice system generally (and the judiciary specifically) to curb the extensive misuse of firearms compels strong, forceful action. Over 100,000 Americans were assaulted with firearms last year. That such a phenomena exists is unconscionable in a society which purports to be peaceful.

The experience with mandatory sentencing laws for crimes committed with firearms in both Florida and Massachusetts appears to have produced some success in reducing robberies committed with guns. Inasmuch as the last decade has shown that such successes in reducing high fear crimes are exceedingly rare, the legislation which you have introduced (H.R. 1559) may serve as an important symbolic step toward a strong societal condemnation of the intolerable level of firearm-related violence which permeates our society. Such a measure will go a long way toward increasing individual accountability for crimes committed with guns.

I would be happy to testify in behalf of this measure if my testimony will be of assistance.

Sincerely.

JOSEPH FREITAS, Jr.

CITY OF WHITTIER, CALIF., March 11, 1977.

Hon. GLENN M. ANDERSON,

Long Beach, Calif.

DEAR MR. ANDERSON: I have reviewed H.R. 1559 which you introduced with a number of co-sponsors. I feel this is an excellent bill and long overdue.

I feel one of the strong points of your bill is the fact that the sentence cannot be suspended and cannot be served concurrently with another sentence involving a federal crime.

Law enforcement is deeply grateful for your efforts in this matter, and I am certain that passage of bills such as this would af-ford a much higher degree of safety to our communities.

CXXIII-711-Part 9

Please contact me if I can be of further assistance to you.

Sincerely.

JAMES F. BALE, Police Chief.

MEDICAL FREEDOM OF CHOICE

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. SYMMS. Mr. Speaker, for over a year I have been promoting the idea that the Food and Drug Administration has seriously curtailed drug research, development and innovation and that the FDA's overregulation of drugs has denied the American consumer many new, life-saving drugs.

I have introduced the medical freedom-of-choice bill in this Congress in an attempt to relieve these problems. The medical freedom-of-choice bill repeals the "effectiveness" provisions from the 1962 amendments to the Food, Drug, and Cosmetic Act. The bill has already gained 87 cosponsors covering the entire political spectrum and has received tremendous outside support.

The following article from the April 13, 1977, issue of Medical Tribune and Medical News is simply another example of the urgent need to pass this legislation. Two of the most prominent physicians in America, Drs. Michael E. DeBakey and Raymond P. Ahlquist, describe the problems the FDA has created in the beta blocker drugs.

I urge my colleagues to read the following article and ask themselves why the United States has chosen to follow the disastrous path of regulatory overkill.

The article follows:

DRS. AHLQUIST, DEBAKEY ON BETA BLOCKER HOLDUP: "REWRITE FDA LAWS, CLEAR DRUGS"..."YOU CAN'T LEGISLATE SCIENCE" Dr. Michael E. DeBakey and Dr. Raymond P. Ahlquist, two of the world's leading medical scientists, have charged that newly-developed, lifesaving beta blockers and other new agents are being withheld from Ameri-

can physicians by FDA footdragging.

"Tested beta blockers, available in Europe, are still not available to the American medical profession," declared Dr. Ahlquist, whose fundamental work on beta blockade recently won him the Lasker award (MT, Dec. Nov. 3, 1976). "It's time to rewrite the laws," said the pioneer investigator. "We're getting more and more regulation from people who are totally unqualified to make regulations."

Broadening the issue, Dr. DeBakey, the world-famous cardiovascular surgeon, told Medical Tribune: "The patient in the United States is the only American without a constituency. The patient's ability to influence events affecting his health is probably less than that of any other American."

The blasts came in the wake of studies abroad finding that a new cardio-selective beta blocker, metoprolol, may be able to reduce by 50% the deaths from infarctions and ischemic heart disease suffered by hypertensives, offering the potential salvage of 100,000 lives a year in the U.S. (MT, March 23, April 6). Though metoprolol has been safely and effectively used by nearly a million patients overseas, the FDA is withholding approval. The seemingly irrelevant grounds are that "a" beta blocker is on the market—pro-

pranolol—a non-selective blocker; a question of tumorigenicity in "one or two" of the other known 20 beta blockers (but not metoprolol); and that metoprolol can be obtained on an emergency basis—for example, for patients who suffer respiratory effects and other intolerable side effects from propranolol.

CONGRESSIONAL REVIEW?

Drs. DeBakey and Ahlquist clearly view the metoprolol issue as only the latest example of FDA muddling amid this country's lag behind Europe in producing effective new

"It's time to place the spotlight of public scrutiny on the way FDA regulations virtually rewrite the law," is the way Dr. De-Bakey put it. "We're constantly told that the regulations are simply a means of implementing measures passed by Congress," he added. "But the fact is that the regulations are becoming increasingly more stringent and limiting than the law. I believe that Congress should review the way in which its laws are being translated into regulations." "There is no question," he added, "that a

"There is no question," he added, "that a lag is taking place in the availability of new drugs in the United States, compared to Europe. Propranolol itself was a case in point."

The pioneer cardiovascular surgeon stressed that he had no direct knowledge of metoprolol, but has been informed by cardiologists that it was a useful agent. The delay in approval of such drugs, he emphasized, illustrated the problems growing out of the constantly expanding, obstructive maze of regulations that serve to block, rather than expedite, the passage of useful new modalities from the research laboratory to the practicing clinician.

Turning to his own specialty, Dr. DeBakey observed that "the prosthetic artery, aneurysmal patches and other vascular prostheses would not be here today if we'd had to comply 25 years ago with current FDA regulations."

From Dr. Ahlquist's standpoint, a major cause of FDA delays in releasing new drugs is the agency's refusal "to accept the results of European experience."

"Propranolol had been used in England for the treatment of hypertension since 1965, but it was only in 1976 that the FDA authorized it for high blood pressure in the United States. There is nothing in the law, I believe, that says this is the only procedure that can be followed," the scientist declared.

"The issue at present does not simply center on metoprolol. The Swedes, for example, have been using 1-prepalol for 15 years, but it's still barred in this country."

Dr. Ahlquist, who is Professor and Chairman of Pharmacology, Medical College of Georgia, added: "The trouble is that you can't legislate medical science. The laws should be rewritten so that scientists, not bureaucrats. make the decisions."

REGULATIONS: AN OBSTACLE

Support for the views of Drs. DeBakey and Ahlquist came from other investigators with whom Medical Tribune talked. There was very nearly a consensus that FDA regulators are a major obstacle to release of safe and effective new compounds.

"One of the results of the FDA regulations is that costs of new drugs are skyrocketing, compared to prices elsewhere," said Dr. Eliot Corday, Clinical Professor of Medicine, University of California, Los Angeles. "I was involved in investigation of a new anticholesterol agent. It would have cost only a few pennies initially. By the time all of the FDA requirements had been met, the drug was costing the patient 80 cents a day. The effects of the regulations are felt, across the board, raising the costs of medical care in every area."

"The delays are extraordinary," declared Dr. A. N. Brest, Professor of Medicine, Jefferson Medical School, Philadelphia. "Propranolol was one case in point. Another was clonidine—I was one of the first investigators on clonidine. Do you know how far that goes back? Ten years!"

RESULTS OF THE QUESTIONNAIRE SURVEY OF THE 19TH OHIO CON-GRESSIONAL DISTRICT

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. CARNEY. Mr. Speaker, on February 15, 1977, I sent out approximately 155,000 questionnaires to the residents of my congressional district, which is the 19th Ohio District. In that questionnaire, I asked my constituents their opinions on some of the major issues facing our country, including the economy, the natural gas emergency, the environment, law enforcement, health, abortion, Government reorganization, foreign affairs, presidential actions, and others.

Approximately 19,200 questionnaires were completed and returned to me, many of them answered by both husband and wife. Mr. Speaker, the results of my questionnaire survey have now been compiled, and they are both interesting and significant. I am inserting those results in the Record at this time for the information and consideration of my colleagues in the U.S. Congress, as well as the President of the United States. The results of the questionnaire follow:

QUESTIONNAIRE RESULTS
[Answers in percent]
SECTION I—THE ECONOMY

 Which of the following policies do you favor to stimulate the economy? (check only one)

48

26

26

53

24

(a) tax cuts for individuals and businesses combined with a public service jobs program_____

(b) tax cuts for individuals and businesses with no public service jobs program

(c) an expanded public service and public works jobs program with no tax cuts.

2. Do you favor the passage of legislation guaranteeing jobs, either in the private sector or the public sector, for all adult Americans who are willing and able to work?

Yes ______ 65 No _____ 35

3. Do you favor a reduction in the overall level of Federal spending even if it means an increase in unemployment?

Yes ______ 50
No _____ 4'
SECTION II—THE NATURAL GAS EMERGENCY

4. Which of the following actions do you favor to assure an adequate supply of natural gas? (check only one)

(a) retain the present price controls on natural gas at the wellhead and have Federal regulatory agencies strictly control the natural gas companies

(b) deregulate natural gas prices and permit prices to be determined by supply and demand.

over the natural gas industry 23
5. Do you favor the creation of a utility stamp program, similar to the food stamp

program, to assist elderly and poor people	e in
meeting the high cost of utilities?	61
Yes	39
SECTION III—THE ENVIRONMENT	
Do you favor: 6. the use of Federal funds for resea	reh
and development of new automobile engithat would be energy-efficient, economi meet environmental standards, and red our dependence on imported oil?	nes cal,
Yes	50
No	50
 an increase in Federal spending for search and development of new ene sources such as solar, wind and geothern 	rgy
Yes	76
No 8. an income tax credit for the cost of	24 in-
sulating a family's principal residence?	67
Yes	33
9. low-interest, long-term loans to hor	me-
owners and builders for the purchase solar or wind energy equipment?	of
Yes	69 31
SECTION IV—LAW ENFORCEMENT	01
Do you favor:	
10. Legislation giving courts the power deny bail to persons charged with the co	to m-
mission of certain crimes of violence?	1182
Yes	86
11. Legislation to make the U.S. integence agencies (F.B.I., C.I.A., etc.) more	elli-
countable to the Congress without endanging their legitimate information-gather operations?	ger-
Yes	
No	. 22
SECTION V—HEALTH 12. Which statement comes closest to y	OHE
views about health insurance?	
(a) Congress should enact legislation es- tablishing a national health insurance	
program for every American covering	
nearly all health care services	
health insurance program that would cover only catastrophic illnesses term	1
hospitalization	31
hospitalization(c) Congress should leave the current health care system alone and rely on	
health care system alone and rely on private insurance companies to pro- tect the public against the rising costs	
of medical and hospital caresection iv—abortion	28
13. Which of these statements best scribes your views on abortion? (check cone)	
(a) amend the Constitution to pro-	10
hibit all abortions(b) permit abortions only when the	10
mother's life is in danger (c) permit abortion on demand	43 47
SECTION VII—GOVERNMENT REORGANIZATIO	N
Do you favor: 15. legislation to abolish the Electoral (Col-
lege and to provide for the election of President and Vice President by direct p	the
ular vote?	
Yes	91

16. legislation to require full public dis-

closure of all income, expenditures and activities of lobbylsts?

EXTENSIONS OF REMARKS
Yes 95 No 5
17. Congress granting broad powers to the President to reorganize the executive branch of the Federal Government?
Yes
Do you favor: 18. restricting U.S. military and economic aid to countries which violate basic human rights?
Yes 91 No 9
19. stricter safety standards for domestic and foreign oil tankers which transport oil to American ports in order to prevent pollution caused by oil spills?
Yes
20. giving up some of our sovereignty over the Panama Canal in order to insure friend- ly relations between the United States and Panama?
Yes
21. the U.S. Government speaking out against the repression of political dissidents in the Soviet Union, even if it might mean straining relations between the United States and the Soviet Union?
Yes
SECTION IX-PRESIDENTIAL ACTIONS
Do you favor the following Presidential actions?
22. President Ford's pardon of former President Nixon for any and all offenses Mr. Nixon may have committed against the United States during his years as President?
Yes
23. President Carter's pardon of the Vietnam era draft evaders who were not involved in a violent act?
Yes43 No57
SECTION X-GENERAL
24. Congressman Carney has introduced a bill to abolish the U.S. Postal Service as a private corporation, and restore the former U.S. Post Office as a department of the Federal Government. Are you in favor of such a bill? 77% yes, 23% no. 25. Are you in favor of legislation to allow parents an income tax credit for the pay-
ment of their children's college or vocational education beyond the high school level? 73%

26. In your opinion, what are the three most important national issues facing the U.S. Congress. List in the order of priority.

Percent 1. Energy research, development and conservation . 2. The economy and inflation_____ ment spending______National security_____ 6. Health care and health insurance_ 7. Crime Tax reform ... 8. Pollution and the environment___ 10. Trust and integrity in govern-Aid for the elderly_____ ------12. The congressional pay raise_____ 13. Welfare reform_____ 14. Other

ALL IS NOT LOST

HON. SHIRLEY N. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mrs. PETTIS. Mr. Speaker, while working in my congressional district during the recent Easter work period, I had the pleasure of attending the first annual Good Friday businessmen's breakfast in Palm Springs. This breakfast was sponsored by the Family YMCA of the Desert and the Palm Desert Chamber of Commerce on behalf of the Family "Y."

During this breakfast I had an opportunity to hear a most inspiring speech given by Mr. E. H. Clark, Jr., president and chief executive officer of Baker In-

ternational Corp., Los Angeles.

Mr. Clark is well-known across the country as a speaker, Christian businessman, and an active participant in the YMCA. I believe, Mr. Speaker, that my colleagues will find the following speech, entitled "All Is Not Lost," to be one of the most encouraging statements made on the importance of the family, and will join me in praising Mr. Clark for his efforts to bring this sorely needed message to the attention of the American people:

ALL IS NOT LOST (By E. H. Clark, Jr.)

Some two hundred years ago as this Nation saw its first dawn, the foundation of its strength was The Family. Families separated by miles or even hundreds of miles from the nearest neighbors, found that the need to feed, clothe and house that family bound all members together in a common need for each other. Father and son, mother and daughter, found common objectives tilling the fields, canning fruits and vegetables, building smoke houses, making clothes, making candles, and even making their own soap from lard and ashes. For generation after generation these same objectives continued to bind families together. No one really even contemplated the question of—"what will happen when we can clothe everyone, feed everyone, and have a roof over everyone's

By the early Sixties we had truly reached that point in the United States. We were now driving the second or the third car; unworn suits, dresses, and shoes hung in the closets; there was a main home, the mountain cabin, the beach hideaway: the liquor cabinet was full enough to destroy our liver; and even though we were becoming over-weight, the garbage disposal was probably the best fed thing in the house. With all these things, the common goal that had bound the family unit together had disappeared and for most, there was nothing to take its place. So, what were we to do with ourselves? For the adults the answer was easy—enjoy the fruits of what this Nation had labored for, for over 175 years. The good life became the order of the 60's for many who previously had known only depression, war rationing and post war semi-rationing as the United States rebuilt Europe. Japan and Russia.

But for the young people of the post war baby crop, this loss of family objective was devastating. They didn't need to work before or after school, they had all the clothes they needed, plenty to eat and somehow or other it never seemed to occur to many parents that what their families needed was guid-

ance as to what to do with themselves and what their goals in life were going to be. Too often when the kids came home from school, they found a note propped up by the phone with a \$50 bill enclosed saying, "We are going to a party and will probably be home late—here are the keys to the second car—enjoy yourself"—but doing what!! For 10 straight generations the basic human needs of food, clothing, and shelter had set life goals for father and son, mother and daughter, without anyone having to think about it, but for this, the 11th generation, the productivity of their collective fore-fathers had removed this "automatic" set-ting of family objectives. They were to become the first generation in the history of the world who could choose their own goalsand no one had taught them how. And-in most cases—their parents were not even aware that this was happening or certainly that it was a problem. Reactions within that 11th generation varied, but all were dramatic, and all caught the Nation and my generation totally by surprise. What happened divided the basic fabric of our society and of the family.

For some, the question of "but what shall we do?" was answered by hot cars, shoplifting for kicks, sex, alcohol and drugs and eventually hallucinations, fantasy, oblivion, coma and death. For some, the answer was destroy the system that put us in the posture of not having any goals in life, not feeling any identity nor any purpose. For some, the solu-tion was the return to simplified living via communes, to recreate the needs to till the soil with their own hands for food, to make their own clothes and to build their own houses. By such choice they retreated to a situation where their goals were set for them by the same survival needs from which the ten previous generations of Americans had taken their goals. For a few, all too few, came the revelation that adequate food, adequate clothing, adequate housing was the foundation from which the human spirit could rise to a new level of value-that of learning how to relate to your neighbor; of being able to really begin cleaning up the ecology of our world; of creating music, poetry and artistic beauties for which we had no time for before; and, yes, time to study and worship the God in whom we placed our trust. As my own family lived through these partly tragic, partly beautiful, but certainly historic times, the YMCA played a major role in helping us maintain our unity and love for each other through that period.

The YMCA really did not enter our family scene until after my release from active duty in the Korean War when we moved to Downey. Steve, our oldest son, then just under six years old, was sitting in the backyard looking through the sliding glass doors of one of our neighbors' houses. He was watching a bunch of grown men dressed in ridiculous headdresses and feathers generally sitting on the floor with a bunch of similarly dressed kids but occasionally getting up and whooping around the room like idiots. I asked Steve what in the world was happening. He said he did not know, but all of his play-mates belonged and loved it and before I knew it, I was hooked on Indian Guidesand, am I glad!

Because of the fact that my sons could not belong unless I did, I made room in my business schedule by juggling trlps and meetings as required to make each Tribe meeting. As a result of the program's format of scout reports, games, and handicrafts, my two oldest boys Steve and Ken emerged for the first time to me as personalities with very unique characteristics as opposed to just kids to be thrown up in the air and given tricycles and full stockings at Christmastime. The differences that I began to notice in these two boys, in their needs and

wants, and in their relationship with each other, changed my whole thought patterns and, in some ways, the patterns of the way that we allowed our different family activities to occur. As an example, being only 14 months apart, these two boys always wanted the same toys, the same food, the same friends, and battled continuously and competitively over almost everything. As you might guess, with 14 months making a difference of almost 25% in their age at the six-year old level, the younger had a difficult time in winning his share of the battles and very shortly it became evident to me that we had to force them to mix in different circles of friends to avoid this competitiveness; which we did with a very positive effect on their relationships.

This same opportunity to see each of our five sons as unique individuals was a continuing value from our Y Clubs. In Gray-Y, I saw the beginnings of leadership as each of the boys took their turn at leading the Gray-Y Club. They had to go through the agonies of trying to get 15 boys of varying backgrounds and opinions to decide what they were going to do and how they were going to do it. I can vividly remember that the goal of one of the clubs (in which Dan, No. 4 son was involved) was to try to brighten at least one day in each month for the hopelessly crippled children at Rancho Los Amigos in Downey. We used to hold our meetings with them and we used to play Bingo, an always popular game, using candy or small donations from the club treasury a Bingo prizes. One in our group would call out the numbers and others would place the markers on the cards for those kids who were paralyzed or in iron lungs. On one of our visits, we were in a ward where a young black girl, about 13 years old, had a tragic case of spastic palsy and could neither control her hands nor her saliva functions. None of the kids could quite brave the danger of being drolled on to put the beans on her bingo card. Without prompting, Dan sat down beside her and, with a Kleenex to clean his hands and her chin, they played bingo together for a full hour. As I saw that particular son last year-then a junior in college-with a beard, bushy sideburns. flappy jeans with ripped seams, (for which I have no great love), I saw past those outward signs that irritated me to see the same boy who sat down in Christian love with that little girl when no one else would. Neither disheveled clothes nor beard will dim that vision.

But, of all the experiences-at least for the young men of our family, camp counselling at YMCA camp has left its imprint of values on their personalities as has no other single event. For the first time, they were now really accountable for eight other human beings-for their safety, their cleanlifor answering the questions of what shall they do—and, all of a sudden, they found themselves saying, "Now, wash your teeth before you go to bed—clean up your bunk—change your underwear—say your prayers"—rather than hearing those same things. And, life took on an entirely different perspective and something happened from within to their attitude and their outlook toward me, toward their mother, and par-ticularly toward their younger brothers and sister that I had been unable to achieve from the outside with all of my persuasion.

But, I do not want to leave the impression that the values I have found in the Y have inured only to our kids. Many were very personal for me in my own business growth. As I began to work on YMCA boards and committees and got into a campaign to build a new YMCA in Downey, I found a whole new learning experience in leadership as quite different from by business experience where job security, promotion, bonuses, stock options, and pay increases, were normal motiva-

tional tools. I found that these motivations were not available in YMCA work. You could not wave a bonus or a promotion in front of people as an incentive. You had to work to-ward a common belief among people that what you were about to do was the right thing to do. You had to build together, a vision in people's minds that the effort was worth the time and sacrifice and that the values given to the family or the community truly made it a worthwhile goal. Thus, the whole concept of goal-setting and participation in the choices of setting goals for a higher level of achievement came into a new focus for me. I saw the way in which a common belief and a common purpose in groups of people could cause them to work together and share the joys of achievement together and began to try to use this knowledge in business endeavors to de-emphasize the paycheck and emphasize the values of what you are doing.

I also found that working with YMCA boys and girls was a particularly rewarding experience to me not only in learning how to break down the communication barrier between generations, but in learning to understand the value system of the contemporaries of my own children. As you might guess, I found this much easier to do with groups outside my family than with my own children. Frankly, I felt that such discussions with my own children might be perceived as probing, interrogating, or questioning, rather than exchanging ideas; but, principally, I was afraid that I might not do it properly and, in my ineptness, damage the relationship within our family circle. I sought out the opportunity to exchange ideas with both college students and high school students. I can remember one conference particularly, "Project Sunrise," put on by the Pacific Region of the YMCA for young men and young women at the college level. This was in the midst of the Vietnam War and shortly after the burning and bombing of the branches of the Bank of America. I was asked to participate on the subject of "How to effect change in our society and do so within the system." As I tried to enter the subject, it became obvious that I was going to get nowhere until this group of roughly 50 young men and women knew who I was, what my values really were, and had made a collective judgment as to whether I should be listened to or not. I had the unique experience of being asked how much money I made, how much I was worth, what was doing with my money, how did I feel about having money when people in some parts of the world were starving to death. In really dealing with some of my personal values in this sort of spotlight, I found that most of them remained reasonable and viable, even when twisted and turned and looked at from all angles. On the other hand, some of the benchmarks to which I had applied blind faith and assumed to be true turned out to be hollow shells when I tried to explain them, and I frankly went through a very shaking experience of discarding some of the things that for over 40 years I had held to be self-evident truths. Since that time I have worked at creating a recurring opportunity of testing my values with young minds, un-fettered by beliefs and prejudices of the

Within the last couple of years, I have finally "pluckered" up the courage to try within my own family circle some of the things that I have found to be extremely valuable in YMCA groups and in the business environment in which we try to work at Baker. Two years ago, we got our entire family together including all daughters-inlaw and grandmothers, to try something, the intent of which was to strengthen our family circle. Unfortunately, the death of a close friend of my mother's prevented her from

being there, but other than that, all of the living first-blood relatives of my wife and I were gathered for this particular occasion. With a list of some 60 human needs available as a thought provoker, each member of our family was asked to select from that list the five human needs most important to each at that particular moment in time. I might add that just the process of doing this, even if it is never shared, can be very valuable in sorting out what is important to you and what is not important to you and clarifying your current most important goals in life.

The objective of sharing this output with each other was very simple. In relating with each other, we could go out of our way to lend a helping hand on something that was important to each other if we only knew what it was that was really important to the other person. There are 11 of us involved in this exercise and the sheer openness with which the subjects were dealt had a dramatically strengthening effect on our family circle. I also found my blood virtually turning to ice water when I saw how many of the needs and most important wants of my family members could be tied back to the way things had happened within the family throughout the prior years and the impacts that we had had on each other throughout the prior years, and I could not help but think if I had only had the courage to try this earlier we could have been offering each other more of a helping hand over the years than had actually occurred.

I can tell you that this exercise caused a real change in my views and in my interacting with others. For example, one of my sons has gone into teaching and coaching within the Catholic school system where his financial opportunities are clearly limited. It was very important to him that the rest of the family members would not think less of him because he was turning his back on the financial side of life in favor of a teaching and coaching role which were very dear and important to him. I have subsequently tried to show my own support of the importance this role by conducting management training seminars for the administrators of our local Catholic high school and by teaching classes for that particular son as an outside resource person.

For another son, who is a political science major in college and very interested in our political system, I have involved him in the preparation of legislative testimony which I have given to Congress and even written his ideas (which improved the testimony) into the record. He accompanied me to the proceedings and ran the projector for the presentation.

For Grandma, where financial security is a key need, a lifetime trust endowment to supplement Social Security and income from personal assets was an easy and then obvious way to help her meet that need.

Frankly, what I am trying to say, is that during this trying period, my wife and our six children found the strength to climb over the hurdles of the protests, the generation gap, the hair gap, our oldest son going to Vietnam as a foot soldier, Watergate, and bribes in the same way that our founding fathers found their strength-from within the family circle. Only when we can do this within our families can we do it within our society, recognizing not only our own needs and wants but the needs and wants of our neighbors. We must harness the productive capability of this Nation to serve our needs and wants, not reject it as an uncontrollable evil. We need national leaders who have the vision to cause us to raise our sights from self-pity and condemnation of our society and cause us to begin to look at how we can help each other build a new layer of good upon the foundation that 200 years of effort by our forefathers has given us. We need cooperation particularly from the television media. They, too, have a social responsibility which rises above the Nielson ratings achievable by focusing on the tragedy of those who had in fact succumbed to the temptation of the times. When only this is shown over and over again, we come to wonder if the whole world doesn't stink! The T.V. camera seems to have been attracted to show in unrealistic magnified perspective, the spot on the rug rather than the beauty of the room. Jesus said, "Let he who hath no sin cast the first stone." We need to also look up to the glory of the heavens as well as our opportunities of this world and set new purposes and goals in life in a balanced perspective.

Easter is a time of reassessment, a time of renewal, a time for new vows. Let's vow to return to the strength that founded this Nation—the Family Circle—and rebuild that strength. From that strength and using the same skills, let's then reach out a helping hand instead of a mailed fist to our neighbors and rebuild the faith in each other that once welded this Nation together. Let us elect leaders who can give us a vision and National goals that will lead to fulfillment rather than frustration. Let us pass on a heritage to our grandchildren as good as the one we received from our grandfathers.

In order to do this, I feel we should consider adding something to a slogan which has been in existence for 200 years and is still printed on the coins we carry in our pocket today. That slogan now says IN GOD WE TRUST, and I think we should add to that another phrase which says AND NOW DEAR GOD, HELP US TO LEARN TO TRUST EACH OTHER

GENO BARONI'S WAR ON POVERTY

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. RODINO. Mr. Speaker, I want to extend my personal congratulations to my dear friend, Monsignor Geno Baroni, upon his appointment as Assistant Secretary of Housing and Urban Development for Consumer Affairs and Regulatory Functions.

As a priest, director of the National Center for Urban Ethnic Affairs, and dedicated American, Geno Baroni has championed the cause of urban America; from the central cities to the neighborhoods; from so-called urban blight to the joy of experiencing the Nation's countless ethnic festivals. Geno's innovations and activities deserve our praise, admiration, and appreciation for an outstanding record in social and cultural achievements.

I would like to call the attention of my colleagues to an article in the Washington Post of April 16 which recognizes Geno's many accomplishments and his innovative approach to problem solving.

GENO BARONI'S WAR ON POVERTY

(By Eugene L. Meyer)

Before "Roots" became a best-seller, television series and national pastime, there was Geno Baroni.

Since the fabled melting pot boiled over in the racial and ethnic polarization of the 1960s, Geno Baroni has been talking about "who am I, the identity issue, the issue that won't go away, the issue of background."

won't go away, the issue of background."

For the 46-year old Catholic priest, roots
means neighborhood. Both are in these days,

suggesting that Geno Baroni may just be a man whose time has come Social activistcum gadfly to the liberal establishment, Baroni is moving into a new arena as assistant secretary of Housing and Urban Development for, according to his own job desription, "neighborhoods, non-governmental organizations and consumer protection."

"I don't think a lot of people understand what I'm going to do or where I come from," Baroni said recently. Where he's coming from is easier to understand, however, than how that translates into policies and programs at

HUD.

Like a veteran retelling war stories, Baroni reviewed his life and times over a hamburger at Trio's Restaurant, a neighborhood eatery around the corner from his National Center for Urban Ethnic Affairs at 1521 16th St. NW. Trio's is an informal place where his friend, the late Dr. George Wiley, launched the welfare rights movement of the 1960s. It was sort of a war room then, where social activists would meet to draw up strategies for change.

Like a battle tactician, Baroni drew circles and lines on any available scrap of paper to illustrate his points. It was like a nostalgia trip through a turbulent time that is only vesterday but seems light years away

yesterday but seems light years away.

He came from the coal mining region of Western Pennsylvania where his father, an Italian immigrant, worked for 47 years. "The Episcopalians owned the coal mines, the Methodists and Lutherans were the bosses, and the Italians, Hungarians and Appalachians, we dug the coal." he said.

"We all went to the same company store and the same public school, and the bosses' daughters were our teachers in the grade school. They were great Americanizers, you know. Melting pot. These are the foreigners kids,' you know. I didn't speak English until

I went to grade school."

He lived in the small mining town of Acosta, whose children "were looked down upon because we came out from the sticks on the school bus" to Somerset, the county seat, to become Americanized in "the Protestant school."

Baroni was ordained in 1956 from Mt. St. Mary's, a small Catholic college in Emmitsburg, Md., near the Pennsylvania border. He is now on the school's board of directors, along with Peter F. O'Malley, an Irish kid from Clinton, Mass., who is president of the Washington Capitols hockey team.

After a stint as a parish priest in working class neighborhoods of Altoona and Johnstown, Pa., Baroni came to Washington in 1960 to attend Catholic University, but there was a bureaucratic snafu and he wound up walking the streets of Shaw, in the inner city, and living at the St. Paul and Augustine Rectory at 1425 V St. NW.

Before the federal war on poverty, Baroni was becoming involved in neighborhood programs from the church as well as coordinating Catholic participation in the 1963 March on Washington for jobs and equality.

With the advent of the Great Society, he became part of a clerical mafia that dominated the District's politics of poverty. The group also included Walter E. Fauntroy, now D.C. Delegate to Congress, Channing E. Philips and others. "We were like traveling in a little pack," Baroni recalled.

The ghetto priest was pushing social programs for poor blacks his own family in Pennsylvania could not comprehend. His truck-driving brother-in-law would say, "We're making it. Why can't they?"

"We'd get into an argument," said Baroni, "and my mother would say, 'Shut up and stop fighting. It's Thanksgiving.' "Baroni's youngest brother, meanwhile, had gone to Vietnam. "He didn't relate to Abbie Hoffman, Angela Davis, Dr. King. He went off to war because my old man said, 'We beat Hitler. You're supposed to fight for your country,

America.' I say, 'This war is no good.' He says 'You ain't the President.'"

By 1968, the brother-in-law had been laid off, the antiwar movement was in full swing, 'and I was getting concerned about the alienation of Middle America—the alienation was economic, social, cultural, political—and wondered how was I ever going to get support for what I was concerned about, justice, poverty, the cities

"Here I come from the working class, and here I was in the gnetto," Baroni said. "At the same time in the 60's, there was kind of intellectual/minority thing going on. Some guy at Harvard gave a lecture. He said, 'Some of us up here are enlightened. Let's help the people at the bottom.' The people in between

were the enemy."

The 1968 assassinations and civil disorders deeply affected Baroni's thinking. "Here I was a white person in a black community. I became concerned about the relationship between white and black in the cities, about polarization between groups."

He began looking for the "bridge issues" that could unite ethnic whites and urban blacks and left 14th Street in 1969 in search of those issues in industrialized northern

cities.

"I was concerned about who was bearing the burden of social change, and who's going to shape and share the burden of social he said. In the 60s, these (white ethnic) people were the enemy. The intellectual, far liberal left began to make fun of them . . . So in 1972, here's Massachusetts and D.C. voting for McGovern. We went from the Lyndon Johnson landslide to the Nixon landslide."

Baroni founded the National Center for Urban Ethnic Affairs and, armed with public and private grants, initiated neighborhood programs in 45 cities. "I began to realize peo-ple live in neighborhoods. People got identity

from them," he said.

From his programs emerged new leaders, such as Rep. Barbara Mikulski (D-Md.) from Baltimore. The Neighborhoods United Project (NUP), a citizen lobby in close-in Prince George's County, also sprung from his efforts. In the five-towns area of Prince George's

next to the District line, he found, blacks and white were able to unite around community issues of transportation and health. didn't try to deal with the black-white thing right away," Baroni recalled. "The issue was stop the freeway, a bridge issue."

Forsaking the melting pot for ethnic pride, saving the neighborhoods-how do these ideas translate into HUD programs, under Baroni's "consumer" mandate? Baroni paused

to think about it.

"I intend . . . I hope to be part of the policy team in terms that will relate to the revitalization of the city," he said slowly, measuring his words. "I'm going to try to develop some programs, some small programs, just like I did at the Center, involving third parties, non-governmental groups, neighborhood groups

"See, neighborhoods have never been a part of urban policy. We ran freeways through them, right? We did urban renewal on them, right? We destroyed neighborhoods in order save them. Remember? It sounds like

Mr. Speaker, I am certain that my colleagues will join me in extending heartfelt congratulations to this man who has touched the lives of all Americans, and in wishing him continued luck and success in his new job. It is the good fortune of the Department of Housing and Urban Development and all citizens that Geno Baroni is on our team.

WHAT IS A SOLDIER?

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. MURPHY of New York. Mr. Speaker, I would like to place into the Extensions of Remarks an article from the March 14, 1977, Army Times. This is an article that I believe all should read.

WHAT IS A SOLDIER?

(By Col. Mike Malone)

CARLISLE BARRACKS, Pa.—The other day, I was giving a talk to basic and advanced course officers at Fort Harrison, Ind. I'd finished condemning the pernicious nature of the "civilian equivalency" theme, and about the uniqueness of the soldier. The question period began. A lieutenant asked: "Sir, would you please give us your definition of a soldier?"

I tried to wing it and define "soldier." I

didn't do worth a damn.

Many people have tried to define "soldier." Gen. C. T. Lanham did a real job with a beau-tiful poem, "Soldier," in Infantry Journal, in 1936. Some people define a soldier as a "summer chimney." Lately, congressmen have defined a soldier as a "civilian equiva-

Only a fool would try to actually write a definition of "soldier." But I'm going to take

a crack at it.

A soldier is . . . a boy, now a man, telling his ma, his father, and his brothers and sisters, and his girl that he's "going in" . . of silent young men sitting on benches in the recruiting station . . . promises of a boundless future, of stripes and bars, education, retirement, medical care, PXs and commissaries . . . many forms, signed with little comprehension and a world of faith the long ride on the Greyhound, and the loud, boastful, hollow, pitiful tales of touchdowns scored, and money made, and women conquered . . . a long and sleepless night in a strange hotel, with six men to a room, and government-paid breakfast, and more Greyhound

. . . The initial silence and uneasy jokes when the MP waves the bus through the gate of the first post, loud sergeants with clip-boards and lists of names ("You people git over there!") . . . the first, shattering look in the mirror after the barber, smirking, have done their deed . . . uniforms that will "shrink," or "you'll grow into" . . . the first, clumsy attempts to spit-shine a boot . the impossibility of carrying a duffle bag with the shoulder strap . . . the end of new, des-

perately needed friendships .

. . . The first ragged formation, the countless and incomprehensibe rules, the fear and insignificance . . . long rooms with posts down the center, and lined-up rows of lockers, and lined-up double-decked steel bunks with bare webs of wire springs, and lined-up, side-by-side commodes . . . schemes, arguments, threats and bargains about the relative merits of upper and lower bunks . the haughtiness of cooks behind serving tables in the mess hall . . . sad, lonely, aching, hot and wet-eyed homesickness, and the probing flashlight of the CQ, searching for the white towels on the bed foots of the KP detail . . . the quick flicker of time between lights out and reveille .

Heels and tendons aching from new boots, shoulders black and blue from the range . . . kickin' and stickin' and Maggie's Drawers, and constant threats, and break-time pushups, and the strange, new sound-snap!-of

rifle rounds passing close by overhead . . . exploring the first intriguing mysteries of C-rations . . . lips burnt on a hot canteen cup, the search for brass in the grass, and the droning voice in the tower, and the sergeants' chiny boots, . . . and raking sand, and painting rocks, and signs: "Fighting First," "Second to None," "Dirty Third," "Fearless Fourth"

The wonder, magic, and confusion of Army weapons and equipment ("Good morning, men. Good morning, Sergeant! Today we will cover the nomenclature and functioning of the M-IA1.") . . . huge mock-ups, charts, and scratchy movies of frostbite horrors and things venereal . . . the downright haunting beauty of Jody, sung by unseen troopers moving somewhere out in the dawn ("Jody's got your gal and gone"). . . sleeping on the springs with the mattress rolled, late on a Friday night . . . stencilled names put on clothing, backward, with too much ink . . . crying and crawling under barbed wire and bullets . . . the clenched fist and gritted teeth and animal urge to smash a fist into the face of authority .

Thin stationery with black and gold Army eagles, and air mail envelopes . . . long lines of young troopers by pay phones . . . proficiency tests and parades, and the stillness and impotence of pistol belts and 45's hung under fat officer bellies . . . pictures for the family with uniform, and American flag, and

a too-big hat . . .

The strength of a mother's hug . . . the wide-eyed admiration of little brothers and sisters . . . the dog, excited, wetting the rug . . . Dad, a fellow man . . . home-cooking . . . a contrived meaning for "S.O.S." . . . outrageous lies, war stories of mean sergeants, physical agony and special buddies . . . the strange feeling of driving a car again . . . excitement at a sweetheart's front door, the warmth, of the first kiss . . . pride in the uniform, and visits to the recruiter, favorite teachers, coaches, buddies and old hangouts . . . the inexorable, too-fast passing of squares on the kitchen calen-dar . . . the last supper, the manila envelope with records, and orders, and goddam unmanageable, awkward, sonofabitchin' duffle-. . last possible Greyhound . . darkness . .

Sergeants with clipboards . . . a payday night on the Neon Strip, country music and tough women with hard eyes, sateen skirts, and tiny, tatooed butterflies . . . a fight with civilians in a parking lot ("Man, I ran away from home when I found out my mother was a civilian!") . . . a little diploma, an MOS, another stripe, more orders, and the unfathomable, omnipotent mysteries of EDCSA, and TDN, and WPOA and RPTNLTNET . . . and again, the damnable dufflebag . . . home and sweetheart, and time passing, and goodbyes and a new post . . . the loss of identity, significance and personal worth at the replacement depot . . . the telephone bargaining for "good deals" by NCOs and officers . . . the new unit, the company sign with a smaller sign beneath ("NO AWOLS in 43 DAYS") . . . and outside the orderly room, the full-length mirror with a sign on the glass ("Soldier, Check Yourself") which gives the soldier personal significance and a gift of trust and confidence . . . and inside the orderly room, another sign which takes it all away ("A Unit Does Well Only Those Things the Boss Checks!")

Reveilles, and classes, and details, guard mounts, and guard posts . . . bitch sessions with the CO, who calls them something else . IG inspections, and pre-IGs, and pre-pre-Gs, officers and NCOs with endless checklists...paint, paint, paint...long weary hours of cleaning and shining, and extra equipment hidden in ventilator shafts...the disappointing, anti-climatic, one simpleassed question ("Where you from, son?") of the inspector . . . the tiny paper balls of field-stripped cigarettes . . . the smell of the inside a tent on a hot afternoon . . .

Man-holes in the ground ("... two by two by you") ... and grenade sumps, the strange, secret smell of deep earth and little, wiggly, inch-long things with a thousand legs and pinchers . . . the difference between a strad-dle trench and a slit trench . . . long night marches, red flashlights, the bite of shoulder straps, and feet up on packs at breaks . . .

Promotions . . . and the sweetheart now a wife, kids, a puppy, furniture from "Sears and Rawbutt," on time . . . more orders, long moves across the land in middle-aged, Fords and Chevys with loaded roof racks, wrapped in torn plastic, whipped by the wind . . . economy motels, hamburgers, sticky, grape-red jelly bread, and wet, smelly diapers, awful fusses, smacked kids, and threats of divorce neither meant nor believed . . . rents too high, quarters too small, sofa legs broken, treasures lost and movers anxious to leave "Just

sign right here") . .

Orders to a combat zone, a move to "home," and a leave filled with sadness, seriousness and love . . . goodbyes at the airport, wife trying to smile and dad, now gray, with eyes cast down, and breaking voice, and a little tremble in his chin . . . the sadness, the loneliness, thoughts of little children and a certain thing they once said, and a certain way they once looked . . . final processing at the POE, and shot records, dog tags, the awful agony of the last Stateside call, collect . . . the mighty Starlifter . . . a fa-miliar face in a nearby seat, and "where in the hell did we serve together?" and "did you ever know 'ole whasisname?" . . . box lunches with boiled eggs and apples and Milky Ways . . . the gift shop, snack bar and men's room at Midway . . .

A bright green land with great V-shaped

fish nets in the river-mouths, the curving contours of tiny rice paddies stepping down the sides of hills . . . shell and bomb craters, tracked vehicles, grasshuts, an airfield. and the skronk of wheels down at Pleiku . . the dazzle and the newness of an alien land, the long line of home-bound troops waiting to fill the still-whining Starlifter . . . another replacement center, and more of those phone calls ("... but General So-and-so told me I would be assigned to ..."), impersonal briefings, insignificance and long letter home . . . a morning formation, a list of names, a check on a roster, and a dusty bus down a dusty road to a base camp . .

Choppers with no doors and no seats, door gunners and black machineguns . . . fright-ening speed across the roof of the jungle canthe whop! whop! of rotor blades . . . troops on the ground, looking up, serious, busy, with longer hair and beard stubble, and fatigue trousers split open at the rear, and no drawers . . . a company commander with old-man eyes, maturity, authority and strength . . . Claymore mines, machetes chopping brush, troopers digging . . C-ration beans, cheese and "Loosiana" hot sauce . . nighttime animal sounds, whispers, distant artillery, the cold of the Central Highlands . . . fitful sleep, a column of dirty men moving out along a mountain ridge, bent under heavy rucksacks, eyes peering forward under the rim of helmets, green towel around the neck to wipe the sweat and ease the bite of shoulder straps... fingernails black and split, sleeves rolled up. dog tags and rosaries, crosses and bandoliers . . . the steel pot and on its camouflage cover the names and words of wisdom and fear, hope and love . . . Jesus . Janet . . . Mom and Pop . . . FTA . . . Ho Chi Minh is a rotten bastard . . . Shorttimer . . . Color me gone . . . God must love enlisted men cause he made so many of 'em . . . The column moving forward . . . near the

rear, a shorttimer, afraid to be up where contacts are made . . . up front alone, the pointman, moving down the ridge with the knowledge that some pointman would soon be in the sights of an NVA weapon . . . the young, lanky, flat-nosed, white-eyed black whose skill and courage as point was legendary ("Man, 'dey calls 'dat cat

The moving column and up front, the sounds of contact . . . at first, tentative, like firecrackers on the 4th . . . and then the staccato bursts, the thumps of grenades, and the building crescendo . . . excited voices on the radio ("John, get the hell up here!"), men dropping to their knees, rolling out of rucksacks, and moving forward behind NCOs . . . the gradual fade of the fire to the front, troops squatting, looking around, alert and afraid and big-eyed . . . the CO on the radio ("Ranger, this is 826 . . 3 NVA in a bunker . . . killed 2 . . . we got one KIA . . . request Dust-off to take him out") . . . dead little men in khaki clothes, and entrenching tools with whittled handles, and short black hair, and too-big helmets and too-long belts-troopers searching for pistols, and papers, and insignia, and souve-

A huge, jolting explosion close by, the firecracker sounds, and flashes everywhere in the predawn dark . . . the snapsnapsnap and the whir and whack of frag . . . men running, yelling and some groaning, flares popping above . . . the blue fireballs of NVA tracers, moving slowly at first, then zipping by . . . small dark figures coming forward, in ones and twos, up the hill, outside the wire . . . into the wire, through the wire, and into the bunkers . . and fire, explosions and the trembling earth and dust and great geysers of dirt, and boards, and boxes. and bodies, flying through the air . .

("Ranger! Ranger! My eyes . . I'm hit . . I can't see! . . please . . somebody help . . I can't see!) . . . ("This is 6.. the sonofabitches are up on the artillery bunkers... beehive the bastards!") . . . ("Grenadier, we got an awful fight going . . . I need all available air strikes . . . right now . . . get me nape and CBU") . . . ("816, get that damn company moving and get up here . . we got 'em in our bunkers!") . . . ("Jesus Christ! They're coming up behind us! . . they're goin' to cut us off!) . . . ("John, the CO's hit bad . . . send a medic and ammo . . . over by my bunker") . . . ("Where in the hell is that rocket fire coming from?") . . . ("Ranger . . . we got to pall back from our bunkers . . . I've still got some wounded there, but the little bastards are all over bastards are all over me . . I can't hold on here") . . . ("816, goddammit, where are you?" . .) . . . ("Ranger . . . this is Big Daddy . . . what is your present situation?") . . . ("3, I know we've got wounded in there now put the goddam Redleg right on the goddam bunkerline! VT... Now, goddammit!")...
("This is Tonto... I can't see your firebase...it's all fire and smoke and
dust...")... ("826! 826!")... ("Hummingbird, can you run that air right across the end of the gun-target line? . . . that's where the little bastards are") . . .

("This is Grenadier . . . we've got two

companies airborne and proceeding to your location . . . where can we put them in?" ("26 Alpha, we got to have ammo! ASAP!") . ("Pete, see if you can move those wounded up behind the CP") ... ("They got a flame thrower!") ... ("816, I moved the Redleg ... now work your way down the bunker line . . lot of 'em in there . . . be careful!")
. . . ("6! 6! They're right in the next bunker!
. . They killed Jackson!") . . . ("3 Alpha's hit in the belly, but he's still sitting there running air strikes . . .") . . . ("Ghostrider, you got guts . . if you can't see the pad,

can you see our flag? . . . Drop the ammo right on it! . . .") . . . ("Well, kill the little bastard if he's in there!") . . . ("Ranger, they're pullin' back!") .

Dawn at last, exhaustion, and "victory . the grotesque, everywhere clusters of ragged dead enemy outside and inside the wire . . . and big Tiny crushed under fallen, timbers in a bunker . . . and 'ole Smitty, who enlisted to fight a second time for his country, lying there trembling, with one eye gone and his hand reaching out . . . and the hand-some recon platoon leader, "Steve the Stud," blown to hell by a rocket . . . him and his Doc, too, when the final reserve of medics and radio operators and headquarters guys had gone, without question, to help Com-D . . . the strange smell of belly wounds, all the bloody bandages . . . the dead troopers silent and still under ponchos . .

Shot-up companies dragging their weary, worn-out asses aboard the birds . . . the rear areas, rest and refit . . . jungle and rain, mines, ambushed convoys, the red dust and tall bamboo of Pleiku, and Dak Pek, and Dak To . . . and still more, day after day with time growing short, odds running out, dies dead or medevacked . . . the always-dreaded shout ("Incoming!") captured NVA with Time magazine articles . . . and "the Day," suddenly here, the quick goodbyes, shucked equipment, the relief, the hot

shower with gallons of water.

A dusty, mildewed, khaki uniform, unworn for a year, still starched, a handful of PX treasures, a black-faced Seiko, a footlocker, that damned dufflebag, orders . . . Nha Trang, and the Starlifter . . . Kansas City, and St. Louis, and Atlanta ("Man, if you die and go to hell, you gotta change in Atlanta!") . . . the shronk, the bags, cab, the street, and

the house . . . Shrieking, flying, socks-down children, screen doors banging, and somehow, four little, precious people held tight, fiercely and long . . . and a tired head, with a little gray pressed into soft tummies, and filled with nothing but boundless joy . . . and big brown eyes, with tears . . . and once again, as years ago, the warmth, wonder, the softness, fragrance, dizzy feeling of the first kiss unintelligible, excited, simultaneously-jab-bered stories of school, scouts, drum majorettes, the neighbor's dog . . . and more talk, bedtime, kids asleep, an endless night of soft talk, moonlight, touches, sweet tears of thankfulness, and the pent-up love of a thousand thoughts and dreams . . .

A clear blue morning, a yellow school bus, and an apple green housecoat, hot black coffee . . . elbows up on the kitchen table. and the first, tentative plans for the next move . . . and . . . and if all these wondrous things, which thousands of us share in whole or part, can-by some mindless "logic" of a soulless computer programmed by a witless pissant ignorant of effect—be called "just

another job,' then I'm a sorry.

That's the best I can do to define a soldier.

FINANCIAL STATEMENT

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. SIMON. Mr. Speaker, each year I disclose my income, assets, and liabilities in detail and for the year 1976 I have made public these figures once again I am attaching for insertion in the RECORD the press release as well as the details of my personal financial status.

EXTENSIONS OF REMARKS

SIMON ISSUES 22ND ANNUAL COMPLETE PERSONAL FINANCIAL STATEMENT

WASHINGTON, D.C .- For the 22nd consecutive year, Rep. Paul Simon, D-Ill., issued a complete personal financial statement Thursday (4-7-77), along with financial statements for the six members of his staff who earned more than \$15,000 in 1976.

Simon's 22-year practice of disclosing the income, assets and liabilities of his family spans the entire length of his service in the Illinois House and Senate, as Lt. Governor of Illinois and as Congressman from the 24th District. It is believed to be the longest period of disclosure for any public official now serving in the United States.

The financial statement shows that Simon and his wife Jeanne had gross earnings of \$64,581.47 in 1976. In addition to salary, the figure includes interest and stock dividends; honoria for speeches; reimbursement for travel, food and lodging expenses; book royalties; payments for magazine articles; rental income; and miscellaneous items.

The statement also shows assets of \$236,-917.53 and liabilities of \$125,581.75, for a net worth of \$111,335.78.

"I've been making these statements for over two decades," Simon said, "because I think it's the best way for the public to decide for itself whether a politician has any conflicts of interest.

"The recent ethics legislation adopted by the House requires more complete financial disclosures, but still not as much detail as I include in my statements. I hope that eventually we will require disclosure statements that include a member's family, so that the people who have put us in positions of public trust know all the facts about our state-ments and income."

The staff disclosures issued with Simon's statement continue a practice he began as Lt. Governor in 1969, when he became the first state official in the nation to require such disclosures of his staff.

THE 22D ANNUAL FINANCIAL STATEMENT OF CONGRESSMAN PAUL SIMON, 24TH DISTRICT, ILLINOIS

1976 INCOME: CONGRESSMAN PAUL SIMON AND FAMILY

Income of Paul and Jeanne Simon: Salary, U.S. House of Representatives, \$44,600

U.S. Treasury, official travel, \$6,826.33.

Rent, Carbondale home, \$2,275.
Paul Simon for Congress Committee, campaign expenses reimbursement, \$1,853.58.

Lutheran Council in U.S.A., travel reimbursement, \$86.48.

CROP, travel reimbursement, \$85.

Assn. of Lutheran Secondary Schools, honorarium,* \$200.

IMPACT (volunteer religious groups), honorarium, \$100.

Refund from insurance, Ozburn Agency, \$126.

Mid-America Press Institute, travel reimbursement, \$150.

Illinois Times, magazine article, \$15. New Republic, magazine article, \$75. Refund from Clark Oil, \$17.42.

Eureka College, honorarium,* \$376. University of Rhode Island, honorarium,

\$200. Illinois Education Assn., honorarium,*

Harvard Institute of Politics, travel reimbursement, \$153.15.

Sangamon State University, honorarium,*

Barat College (Jeanne), honorarium,*

Hartigan for Lt. Governor (Jeanne), reimbursement for campaigning expenses,

*These honoraria include reimbursement for travel.

Interest on certificate of deposit, Bank of Maryland, \$19.17.

Alabama Democratic Conference, honorarium,* \$250.

Missourians for Litton, travel reimbursement, \$207.

Concordia Publishing House, article, \$50. Concordia Lutheran School, honorarium,*

Atlantic District Lutheran Church, honorarium,* \$250.

National School Boards Assn., honorarium.* \$500.

Iowa District Lutheran Church, honorarium, * \$318.35.

Columbia Journalism Review, for completing survey form, \$1. Lincoln Memorial University, travel reim-

bursement, \$497.48.

St. John's Church, Forest Park, Illinois, honorarium, * \$100.

Sign, magazine book review, \$100. Union United Methodist Church, Belleville, honorarium, \$100.

Illinois Lutheran Women (Jeanne), hon-orarium,* \$173.

Southern Illinois District Lutheran Church, honorarium, \$75.

Howard University, expenses reimbursement, \$120.10.

CONFEDEX, Conference of Educational Executives, honorarium, \$100.

Book royalties, \$2,878.16. Carbondale National Bank, interest, \$25.94. General American Life, interest, \$39.14 Citizens Savings & Loan, Silver Spring,

Md., interest, \$13.21. University Bank, Carbondale, interest, \$3.14.

Polish National Alliance, interest, \$2. Mobil Corporation, interest, \$3.87.

(The following entries are all for dividends on stock holdings:)

Book of the Month, \$85. Adams Express, \$120.12. AT&T, \$8.

Bethlehem Steel, \$10. Brunswick, 50c.

Chrysler, 60c. Crown Zellerbach, \$10.80. Fruehauf, \$7.20.

Lear Siegler, \$4. Maremont, \$11.67.

Mass Inv. Growth, \$54.39. National Aviation, \$90.09.

National Fund, Wts., \$.90. National Stl. Corp., \$5. Norton Simon, \$5.80.

Pepsico, \$4. Ralston Purina, \$4.80.

Scott Paper, \$2.88 .

Texaco, \$28. United Merch & Mfg., \$6.40. Warner Lambert, \$4.

Westinghouse, \$3.88. Gulf & Western, \$.60.

Harper & Row, \$5.20. Borg Warner, \$28.25.

Ludlow, \$20. Fairchild, \$2.40. Marcor, \$3.

Total 1976 income, Paul and Jeanne Simon: \$64,581.47.

NOTES

(1) Gifts with a value of more than \$25. Last year I publicly stated that I would list all gifts with a value of more than \$25 as part of my yearly financial statement. The gifts I received in 1976 valued at more than \$25 were:

(a) A book from the Government of Can-ada, given to all members of Congress, com-memorating the friendship of Canada and the U.S. on our Bicentennial, value not known

(b) A framed replica of the Emancipation Proclamation, presented to me by the members of my campaign committee, value not known

(c) A print of a Crab Orchard scene, presented by the artist, Herb Fink, value not known

(d) Martin Oil Co. sign to my son Martin, value not known Other gifts (except from family members) with a value of more than \$25 were returned

(2) Stationery allowance. Through 1976, members of Congress received \$6,500 per year for stationery and office supplies, an amount the law permitted them to keep as personal income if expenses amounted to less than that. I used none of that amount as personal income. In fact, in my case, our office expenses exceeded my allotment by \$1,763.81.

(3) Refund balances. During 1976 I also cashed in refund balances in the following amounts:

(a) General American Life, \$840.57 (b) Illinois Teachers Retirement, \$2,562.88 Income of children, Sheila and Martin

Sheila: Total of \$135.04, including interest from Citizens Savings & Loan of Potomac, Md., \$8.79; interest from United Savings & Loan of Troy, Ill., \$23.33; interest from Carbondale Savings & Loan, \$12.72; dividends from Ford Motor Co., \$2.80, and AT&T, \$7.40; and babysitting income (est.), \$80. Martin: Total of \$97.07, including interest

from Citizens Savings & Loan, \$3.68; interest from United Savings & Loan, \$23.19; dividends from Ford Motor Co., \$2.80, and AT&T, \$7.40; and lawn-mowing income (est.), \$60.

STATEMENT OF THE ASSETS, LIABILITIES, AND THE NET WORTH OF PAUL AND JEANNE SIMON

(As of Jan. 1, 1977)

Assets

Bank of Maryland checking account balance, \$31.

House of Representatives checking account balance, \$287.85.

FINANCIAL STATEMENTS, STAFF OF CONGRESSMAN PAUL SIMON

(Submitted to Congressman Simon in April 1977)

Margaret Bergin, Administrative Assistant

1976 income other than government: dividends from Baxter Laboratories, AT&T, Reliance Electric Co., Mead, General Public Utilities, El Paso Natural Gas, Virginia Electric Power, totaling approx. \$450; interest from Farm & Home Savings and the Congressional Employees Federal Credit Union, totaling about \$210.

Sources and amounts of indebtedness over \$500: Community Bank of West Frankfort, 84.000: Congressional Employees Federal Credit Union, \$1,800.

Stocks and bonds owned: AT&T, Mead, Baxter Laboratories, El Paso Natural Gas, Virginia Electric Power Co., American Motor Inns, General Public Utilities, Reliance Electric Co., totaling approx. \$20,000; shares in Congressional Employees Federal Credit Union, \$6,890.

Property owned: one-third interest in a 133-acre farm in Midland, Va., with farm house and barn, purchased in 1972 and valued at approx. \$77,000 total value. Ray Johnsen, Office Manager-

1976 income other than government: Troy

Publishing Co. stock sale, \$3,000 (80.74% capital gains, \$2,422.20); rental income from home and apartment, Troy, Ill., \$2,922.84; General Motors, Inc., dividends, \$59.69; General American Life Ins. interest, \$102; Metropolitan Life Ins. interest, \$16; Troy Tribune interest, \$300; Congressional Employees Federal Credit Union interest, \$16; and Roodhouse Record, Inc., dividends, \$180.00 (all totaling \$6,589.53.)

Sources and amounts of indebtedness over \$500: Washington & Lee Savings & Loan, Congressional Employees Federal \$52,300;

Credit Union, \$1,400.
Stocks and bonds owned: Congressional
Employees Federal Credit Union shares,
\$147.74; 100 shares of Cottonwood Junction, \$10,000; 17 shares of General Motors, \$1,045; 15 shares of Roodhouse Record, Inc., \$1,500; and Series E Bonds, \$318.75 totaling \$12,692.75).

Property owned: State of Illinois Employees Retirement System, \$1,772.01; real estate, Arlington, Va., \$95,000; real estate, Troy, , \$30,000; household furnishings, \$15,000; 1974 Chevrolet, \$2,500; 1975 Volkswagen, \$2,500 (totaling \$147,090.76).

Terry Michael, Press Secretary— 1976 income other than government: None. Sources and amounts of indebtedness over \$500: None.

Stocks and bonds owned: Congressional Employees Federal Credit Union shares, \$450.
Property owned: "73 Oldsmobile, \$1,800; household goods, \$1,200.

Paul Gayer, District Assistant-

1976 income other than government: Bank of Ziegler interest, \$14.28; Metropolitan Life Ins. Interest, \$14.28; First Community Bank of West Frankfort interest, \$834.54; Civil Service annuity payments, \$1,338.00; Ben-ton Community Bank Interest, \$165; and National Investors dividends, \$142.

Sources and amounts of indebtedness over \$500: auto loan, Bank of Ziegler, \$3,227.66. Stocks and bonds owned: Series E Bonds, 140 shares of Gayer Investment \$3 181 63:

Corp., \$7,100.

Property owned: house and lot, 201 Station SL., Ziegler, \$10,000; two-thirds interest in 6-acre lot, Grant & Maryland Streets, Ziegler, \$4,000; vacant lot, 215 Church St., Ziegler, \$300; two-thirds interest, vacant lot, 217 Church St., Ziegler, \$300; two-thirds interest, vacant lot, 201 Church St., Ziegler, \$690; two-thirds interest, 5-acre lot, Penn St., Ziegler, \$4,000; second mortgage on lot and home in Herrin, \$2,500; first mortgage on 5 acres and house east of West Frankfort, \$12,000; household goods, \$4,000; 1976 Lincoln, \$8,000; 1974 Chevrolet truck, \$2,500.

Allen Cissell, Legislative Assistant—
1976 income other than government: in-

terest on savings deposits, \$500; income from sale of property, \$2,892.21.
Sources and amounts of indebtedness over

\$500: City National Bank of Murphysboro, \$943.76.

Stocks and bonds owned: Congressional Employees Federal Credit Union, \$9,530.40; Southern Illinois University Credit Union, \$1,085.74; stocks, Zurn, Humana, Marriott, Vindale, Kemper Municipal Bond Fund totaling \$1,899.22.

Property owned: 1974 Pinto station wagon, \$2,800; furniture and household goods, \$7.000.

Ray Buss, District Assistant-

1976 income other than government: rental income, \$10,200; salary from Mike Howlett for Governor Committee while on leave of absence from Cong. Simon for six months, \$15,000.

Sources and amounts of indebtedness over \$500: mortgage, Carbondale Savings & Loan, \$57,750; mortgage, Mary Licos, \$10,500; personal loan, Salem National Bank, \$8,000; University Bank of Carbondale, \$3,700.

Stocks and bonds owned: None. Property owned: apartment house, \$100,-000; 1975 Dodge, \$3,500; household furnishings, \$5,000; sheepdog, \$100. THE MILLION DOLLAR DOCTOR

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. DRINAN. Mr. Speaker, in Febthe administration announced that it wanted the costly and controversial Uniformed Services University of the Health Sciences abolished Termination of this project this year will result in a savings of \$118 million over the next 5 years with further savings each year the university is inactive.

In the supplemental appropriations for fiscal year 1977, H.R. 4877, the Senate has included \$12,465,000 for military and civilian personnel costs at the university. In each of four amendments which are reported back to the House in technical disagreement, the Senate has made funds available through fiscal year 1978 "to eliminate uncertainty over the future of the medical university."

Under the House rules language in a supplemental appropriations bill providing funds to be available until the end of the next fiscal year is conceded to be legislation in an appropriations bill and out of order. The House managers for H.R. 4877 will offer a motion to recede and concur on these amendments. I urge my colleagues to vote "no" on those motions both because this advance funding violates House rules and because of strong arguments against this continued expenditure.

BACKGROUND In 1971, the then chairman of the House Armed Services Committee, Hon. Edward Hébert, reported H.R. 2, the Uniformed Services Health Professions Revitalization Act, to the House floor. Although there was some objection raised at that time based on the cost of maintaining the university, the measure passed and provided for a military medical school as well as the Armed Forces health professions scholarship program. It was intended that the university when operating at full level would produce 175 graduates yearly and the scholarship program authorized 5,000 scholarships at any one time for training in accredited institutions leading to degrees in medicine, dentistry, and other health professions. The university admitted its first class of 32 students last fall and has accepted another 68 students this year. It is not expected that it will be operating at a full level until 1984.

The report filed with H.R. 2 in 1971 made note of the problem in retaining physicians in the armed services in the context of what was then seen as a critical shortage of physicians nationally and a growing concern about reliance on foreign-trained doctors. The intent of the 1971 act was to overcome physician shortages in the Armed Forces which resulted from the end of the doctor draft.

Some of those fears have been assuaged fact. The Journal of the American Medical Association in December of 1976 reported statistical data showing that during the academic years 1957-58 to 1975-76 the number of M.D. graduates of U.S. schools accelerated from 6,861 to 13,961. This continued growth is projected to 1980-81 when 15,512 are expected to graduate—an increase of 11 percent in just 4 years.

In the Findings and Declaration of Policy stated in Public Law 94-484, the Health Professions Educational Assistance Act of 1976 it is noted that:

The Congress further finds and declares that there is no longer an insufficient number of physicians and surgeons in the United States such that there is no further need for affording preference to alien physicians and surgeons in admission to the United States under the Immigration and Nationality Act.

Through enactment of Public Law 94-484, the Congress stated its recognition of the problem of physician distribution as opposed to supply. I do not intend to imply that this act addressed directly the matter of military physicians but only to point out that we no longer envision a critical shortage of physicians in the future.

The legislative history of the authorization and funding acts for the University is marked by continued debate centering around whether this undertaking is the most cost-effective method of procuring military physicians. The Defense Manpower Commission, the General Accounting Office, and the House Appropriations Committee surveys and investigations staff have all concluded that the University is an unjustifiably costly method of meeting current and future procurement goals for military medical personnel and each recommended that the project be terminated.

THE DEFENSE MANPOWER COMMISSION

In May of 1975 the prestigious Defense Manpower Commission which was appointed by the Congress to "conduct a comprehensive study and investigation of the overall manpower requirements of the Department of Defense on both a short-term and long-term basis" stated:

Notwithstanding the minimal start-up expenditures that have already been made, the Commission recommends that (1) the Uniformed Services University of the Health Sciences approach be terminated; and (2) utilization be made of existing scholarships, subsidies and bonus programs as a more cost-effective way to meet current and future procurement and retention goals for military medical personnel of high quality.

The Commission reached its conclusion on estimates that a university graduate would cost between \$150,000 and \$200,000 to train whereas a scholarship program graduate would cost about \$34,000.

THE GAO REPORT

In May of 1976 the General Accounting Office submitted a comprehensive cost-effectiveness study of the university and scholarship program to the Congress. The GAO analysis showed that in 1984, the first full year of simultaneous operation of both programs:

First. The estimated educational cost will be \$36,784 for each of the 988 graduates of the scholarship program and \$189,980 for each of the university graduates.

Second. The estimated educational costs per staff-year of expected service

will be \$4,362 for the scholarship program graduates and \$10,232 for university graduates.

Third. The total cost per staff-year of expected service including anticipated pay and retirement costs will be \$21,444 for the scholarship program graduates and \$26,236 for university graduates.

The GAO also recommended three alternatives which would provide for retention needs and which would not be as costly as the university. These included extending the scholarship program, full sponsorship of any scholarship recipient taking civilian residency training and increased initial active duty obligation for scholarship participants.

THE HOUSE S. & I. STUDY

In a recently completed report to the House Appropriations Committee, the surveys and investigations staff stood by their 1975 report which concluded that the university would be a much more costly method of procuring physicians for the military than the scholarship program.

Most strikingly the report showed that under the present arrangement of providing physicians through the scholarship program and the university, over a 30-year period 12,327 military staff years would be provided at a cost of \$293 million. Under an alternative program in which the university is terminated but authorized intern and resident spaces are increased and the number of scholarship graduates are increased, 12,325 military staff years can be produced at a cost of \$250 million. Thus, for just about the same number of staff years we can save \$43 million through elimination of the university.

In its conclusion the staff report states: It is the opinion of the Investigative staff that the cost to DOD of educating a USUHS student continues to exceed the cost of student education under the Armed Forces Health Professions Scholarship Program. USUHS graduates are estimated to comprise only 9 percent of the future military requirement as compared to 49 percent from the scholarship program and 42 percent from volunteers. The 9 percent shortfall that could occur by UHSUHS termination could be overcome by expansion of the scholarship program and/or by reactivating senior student programs which formerly provided medical education to qualified military personnel. It would appear that the senior student program would be equally or more effective for the retention of military physicians as pre-sumed by advocates of the USUHS program.

FACT AND FICTION

Myth No. 1.—The University is a less expensive means of procuring physicians for the armed services than the scholar-ship program.

All of the cost studies completed by the GAO, Defense Manpower Commission and House Appropriations Committee surveys and investigations staff. which I have noted earlier, support the conclusion that cost per expected staff year of service is less for graduates of the scholarship program than it is for graduates of the University.

of the University.

Proponents of the University attempt to refute these comprehensive studies through a five-page letter report which was provided at the request of the House Armed Services Committee on June 15.

1976. The committee specifically requested that GAO, over the agency's vocal objections, include in a comparison of the University and scholarship programs cost the fixed expenditure of HEW to private medical education.

The Comptroller General provided the computation as the committee requested and again pointed out that inclusion of these costs was not a mathematically valid comparison. HEW support to civilian medical education exists totally independent of the scholarship program or the University. GAO did not include these expenditures in its May 1976 study because in its words this Federal assistance:

Was provided before and has been provided since the establishment of the Scholarship Program.

 Would continue regardless of whether the Scholarship Program continues or is completely abandoned.

The GAO study also pointed out that a cost-effectiveness analysis deals only with those potential costs directly attributable to the implementation of a program.

In testimony before the Senate Appropriations Committee on March 21, 1977, Mr. John Dexter, Deputy Director for Cost and Budget Analysis, Office of the Assistant Secretary of Defense, stated DOD's position:

Federal subsidies are made available to civilian medical schools for reasons totally unrelated to the Scholarship Program and are likely to continue regardless of whether or not the DOD medical school continues. The Department is in full agreement with the GAO position.

Myth No. 2.—The rising cost of private medical education will increase costs incurred through the scholarship program.

The cost of private medical education is rising. However the curernt distribution of DOD scholarship students indicates that private tuition increases will not impact significantly on DOD. This is the conclusion of the DOD in testimony before the Senate Appropriations Committee.

Thirty-eight percent of the scholarship participants are in medical schools where the tuition is \$2,000 or under, 32 percent are in schools where the tuition is between \$2,000 and \$4,000, 22 percent are attending schools where tuition costs are between \$4,000 and \$6,000, 8 percent are at schools where the tuition is between \$6,000 and \$8,000 and no scholarship students are in medical schools where the tuition exceeds \$8,000.

Myth No. 3.—There is a physician shortage which will impact severely on DOD.

As I pointed out earlier the problem is not one of supply but of distribution. HEW projects the national supply of physicians to increase from 375,000 in 1975 to 517,200 in 1985, an increase of about 38 percent. By the time the first full class of 175 students graduate it will be 1984. What has in the past been envisioned as a physician shortage may be changing to a physician surplus with the result that more physicians will be interested in positions with the armed services.

There is a physician shortage in the Armed Forces which, as has been shown, can be met through alternatives less costly than the university. Moreover, the small number of graduates will not make a substantial difference even if the worst happens and the Armed Forces physician shortage persists.

Myth No. 4.—Without the University the Department of Defense will be unable to meet its physician retention needs.

This is challenged by the surveys and investigations staff report which was noted earlier. Moreover, DOD has stated its view that retention rates for physicians are rising. According to information raised during the Senate debate on this matter, as of December 31, 1976, DOD had filled 11,080 of the 11,648 authorized physician slots for fiscal year 1977.

The scholarship program graduate who enters the progrm in his or her first year of medical school will be obligated to serve a minimum of 5 years and up to $10\frac{1}{2}$ years—1 year internship, 4 years residency, and $5\frac{1}{2}$ years payback. The University graduate incurs a 3-year

greater obligation.

According to DOD when you include the important element of variable incentive pay the result is "a very convincing argument that physician retention rates will increase significantly over the next several years." Although there is limited experience with variable incentive pay, current statistics show that three out of four unencumbered physicians agree to continue on active duty. DOD has stated its position as follows:

In summary DOD is convinced that physician requirements can be met in the 1980's more economically through a combination of the scholarship program and direct recruiting.

Myth No. 5.—We already have the building so why not continue with this project.

The primary building at the Bethesda campus is only 17 percent completed. The surveys and investigation staff noted that completing the current construction as a shell would save termination costs to the contractor and provide that the building would be adaptable for other purposes.

It is likely that the National Institutes of Health or the Bethesda Naval Hospital

could use this facility.

Myth No. 6.—We need specially trained physicians for specific military needs.

A perusal of the catalog of the Uni-

A perusal of the catalog of the Uniformed Services University of the Health Sciences shows that the curriculum does not differ from the curriculum of private medical colleges. Under the educational objectives and curriculum, the catalog states:

It has been deemed appropriate to offer a rather uniform curriculum . . There is a core of instruction in human biology with initial emphasis on the traditional basic sciences.

Since military medicine is primarily family medicine I doubt that university graduates will be any better equipped to serve the Armed Forces than their colleagues from private medical colleges.

A look at the statistics for the military health services system shows that in 1975 the practice of medicine by Armed Forces physicians was broken down by service to the following groups: 3.9 percent survivors, 25.8 percent dependents of retired personnel, 12.3 percent retired personnel, 34.1 percent dependents of active duty personnel, and 23.9 percent active duty personnel. In 1980 it is expected military physicians will be treating more retired personnel and their dependents and less active duty personnel and dependents.

Myth No. 7.—The termination of the university will prevent the present 32 students from completing their educations.

In the event of termination the tuition costs of the present 32 students at private medical colleges could be borne by the university through fiscal year 1977 appropriations. Thereafter the respective military services could assume full responsibility through other programs such as the Armed Forces scholarship program.

In conclusion we must again consider if it wise for the Federal Government to be involved in the business of running a university be it for medicine or any other purpose. The long tradition of academic autonomy in American higher education suggests otherwise.

The National Academy of Sciences opposed this project in 1972 and stated:

Little would seem to be gained from such a step that would compare with the sizable contributions that could accrue both to the nation at large as well as to military needs by continuing the expansion of our existing system of state and privately supported medical institutions for the health professions. It is this series of institutions with their deep community roots and involvement that can provide the soundest base for the development of the highly qualified professionals needed to cope with the full range of health and medical problems.

SUMMER FOOD PROGRAM AMEND-MENTS OF 1977

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. MILLER of California. Mr. Speaker, I am introducing today a measure which I believe represents a major step forward in the effort to control and administer the summer food program, an important child nutrition program which provides meals to needy low-income children during the summer months.

We have all heard stories of the problems arising in the administration of the program last year-stories of maladministration, of fraud, and of abuse, I was, during debates on Public Law 94-105, and still am a strong supporter of this essential child nutrition program. Unfortunately, the legislation we enacted in 1975 did not clearly delineate responsibilities, and did not provide for sufficient accountability to insure an effective and efficient program. The bill I am introducing today is directed toward insuring that every agency that participates in the program is aware of their responsibilities, and will provide the Secretary of Agriculture with clear authority to administer the program in a manner which

will reduce the potential for fraud and abuse.

Only those sponsors who provide a year-round community service, and who demonstrate fiscal and administrative capability, will be entitled to participate in the program. This provision will help to limit the fly-by-night groups which appear to have sprung up and which have been responsible for many of the problems. An emphasis will be placed upon past performance, thus placing a premium on experienced sponsors who have conducted sound programs in the past. State agencies will be given authority to impose site size limitations on sponsors, to insure that the programs are conducted in an administratively responsible manner

My bill will also impose stronger controls on vendors. Currently a sponsor which contracts with a food service management company for food service has no means to investigate the vendor's performance or capability. All vendors would be required to register with the state agency, disclosing their corporate status, their meal production capability. and their past relationship with the program. This information would also be transmitted to USDA, so that a State agency could contact a central registry to obtain information about a vendor which may have been registered in another State and was now expanding its operations.

The Secretary would be required to conduct a study to determine appropriate rates of administrative reimbursement. Currently, such reimbursement is directly related to the number of meals served by a sponsor, thus encouraging inflation of numbers of meals served. A study, taking into account type of meal service, site-related costs, and numbers of children served, will provide the information for a formula which will establish reimbursement levels on a more

fiscally responsible basis.

To assist USDA in their important job of monitoring the operation of the program, and ensuring that the States are taking appropriate steps to control the program, so that needy children are fed quality meals, this bill will tighten up the requirements for the State plans of summer food program operations. In this way, The Secretary will be fully informed of the steps each State is taking to evaluate need, to register vendors, to disallow sponsors and vendors who are out of compliance with the law and the regulations, and to encourage utilization of on-site preparation and development of quality food programs.

Each of the provisions in this bill will assist sponsors, vendors, State agencys and USDA in developing strong, effective summer food programs. Each group will be fully apprised of their responsibilities. The State agencies will have the necessary legislative support to crack down on vendors and sponsors who do not comply with these requirements.

Too many comments have been heard about the inability of USDA and the State agencies to take these necessary crack-down measures. This bill will make it clear that the Secretary and the States have the authority, and must

take specific steps to ensure that the abuses of last year do not re-occur.

THE EFFECTS OF AIR POLLUTION ON CHILDREN

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. MILLER of California. Mr. Speaker, I would like to direct attention to a recent task force report prepared by the National Heart and Lung Institute which outlines an alarming discovery. According to this report, the severity of the consequences to children reared in "bad air" may only be known in later life. I think this is a particularly frightening prospect for those who are presently rearing their families in neighborhoods subject to air pollution.

BAD AIR FOR CHILDREN

(By Dorothy Noyes Kane)

Children are especially sensitive to air pollution, and the consequences to them may be of longer duration than to adults. In a recent task force report, the National Heart

and Lung Institute observed.

"These are scattered data which suggest that the initiation of environmental lung disease as a result of air pollution in childhood may be the starting point for continuation and progression of such disease in later life...Should such a relationship be established between exposure to polluted air in childhood and subsequent increased risk of chronic lung disease, it will have identified an important point for the application of preventive measures."

Of course, it is not only children's lungs that may be adversely affected by air pollutants. A number of other organs may also bear the brunt of toxic agents, as we shall see. Ill effects from these agents may not become manifest for years or decades. The effects of low-level pollution-not the acute morbidity and mortality arising from the more dramatic and severe air pollution episodes-are the concern of this article.

Certain distinctions which set the young apart from adults play a role in air pollution difficulties experienced by many children. These distinctions include physical, behavioral, disease, and developmental factors to

be detailed in what follows.

Higher Breathing Rate. Children have a higher resting metobolic rate, a higher rate of air exchange between lungs and atmosphere, and relatively greater volume of air exchanged than do adults. Thus, per unit of body weight, the young breathe in more air (and thus more air pollutants) than do older persons. Indeed, under comparable exposure, children apparently inhale two to three times as much of a pollutant per unit of body weight as do adults. This is significant, since the efficiency of removal of pollutants depends to some extent on the rate of flow into and out of the lungs.

Greater Activity. Added to the metabolic difference between infant or child and adult is the more intense physical activity of the young. As the level of activity rises, so does the rate of air exchange in the lungsin a roughly exponential manner. In fact, during exercise, pulmonary ventilation can increase by a factor of about ten. Thus, children face heightened susceptibility to pollutants in the upper airways as well as in

the lungs. Size. Being shorter than adults, children are more susceptible to heavier air pollutants

which have settled on or near ground level. Some of these pollutants, such as heavy metals, may possess particularly damaging properties for developing children. Dust loaded with toxic particles can add substantially to the child's total exposure to air pol-

In the case of lead, the concentration in air varies inversely with altitude, and devices used in measuring air-lead concentration are rarely, if ever, placed at the height at which young children breathe. Lead concentration t a height of 1.5 meters in one study was double that at a height of 20 meters. Similarly, the concentration of ozone is greater at a lower level. In fact, one study showed the concentration of ozone to be four times greater at 1 meter than at 2 meters.

Play Activity. Vigorous play in house, yard, or schoolroom stirs up dust and settled pollutants which then are more likely to enter the child's respiratory tract. Dust and dirt on hands also contribute to a small child's total intake of airborne particles, particularly if if the child has an addictive habit of trying to eat nonfood items (called pica). This makes for a potentially dangerous situation with respect to lead (and possibly other metals as well), since there is apparently greater absorption of lead through the gastrollar treatment and the state of the st trointestinal tract in children than in

Mouth Breathing. More exercise combined with blockage of the nasal passageways can lead to increased mouth breathing, which in turn leads to less effective natural filtering of inhaled air pollutants. Since children are more physically active, and since their respiratory defense mechanism is more often impaired by conditions such as nasal or bronchial infections, they frequently are less able to adjust to inhaled toxic pollutants.

More Frequent Respiratory Tract Infections. A major contributor to blockage of the tions. A major contributor to blockage of the nasal passageways—and thus to impairment of the normal filtering process—is upper respiratory infection, which accounts for a large proportion of the acute pediatric illnesses. With the lung sensitized by viral infection, air pollutants—because of their suppressive effect on phagoratesis (the reserve pressive effect on phagocytosis (the process of ingestion and usually of isolation or de-struction of particulate matter by certain blood cells) and on the formation of antibodies-may prove a dual threat, compounding the risk of secondary bacterial infection in the lung and impairing the development of effective immunity to viral infection as

Development Factors. Growing children face special risks from certain chemicals at various times and in various ways, depending both upon the nature and extent of the exposure and the child's age and nutritional health. For example, inadequacies of certain minerals, vitamins, and proteins may augment the toxic effects of lead. Furthermore, the predilection for lead to concentrate in tissue, as contrasted with dense bone tissue, in children may be another factor which makes children more vulnerable to long-term effects of this pollutant. (See Scientist and Citizen, April 1968.)

Many chemicals pass the placental barrier, thus imposing mutagenic, teratogenic, carcinogenic, and other threats to the fetus. Maternal exposure, therefore, may increase the risk to the infant, first, by modifying the functions of specific organs and systems in the infant and, second, by decreasing the ability of the infant to cope with any toxic agents in the tissues at birth or later.

Thus, for the reasons outlined above, chil-

dren should no longer be considered merely convenient epidemiologic subjects. As distinctly unique living beings, they deserve special consideration because of their vulnerability to air pollutants during long exposure. At their play—which is the equivalent of their work—they, too, risk occupational hazards both indoors and out.

A TREATY WE MAY BE VIOLATING

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. SIMON. Mr. Speaker, I write a weekly column for the newspapers and radio stations of my district. One weekly column I wrote recently on the importance of foreign languages has been reprinted in a few newspapers, and I thought its message important enough to pass on to my colleagues who may be interested in this area.

A TREATY WE MAY BE VIOLATING

A little-noted provision in the document which the United States and 34 other nations signed almost two years ago at Helsinki commits the United States to encouraging the studies of foreign languages and cultures.

But compared to five years ago, ten years ago, or twenty years ago, fewer—not more-Americans are studying foreign languages.

We properly point out when the Soviets or others violate human rights provisions of the Helsinki agreement, but we also have an obligation to live up to provisions of that agreement.

One statistic intrigues me, one which does not make sense for us as a nation economially, culturally, or militarily: There are more teachers of English in the Soviet Union than there are students of Russian in the United States.

There are other interesting straws in the wind, which show that we are not paying attention to other nations and cultures as

we should:

For almost two years I taught at Sangamon State University at Springfield, Illinois, in many ways an excellent university. But that university does not teach one single foreign language course. I don't believe that ten years ago or fifty years ago there would have existed an institution of higher learning in the nation which did not teach foreign lan-

Fewer and fewer colleges and universities demand a foreign language as an entrance requirement. Only about 10 percent of the schools now require it.

The Foreign Service of the United States no longer requires any foreign language background before you can enter. When you talk to State Department officials, they say they would like to get people with language skills, but because so few Americans have studied foreign languages they were forced to drop this requirement.

Fewer and fewer American students spend any of their college years abroad, about half

as many today as in 1973.

Up-to-date statistics are hard to get, but the figures for the percentage of high school students studying foreign languages for a few years tells a story: 1965, 31 per cent; 1968, 30 per cent; 1970, 28 per cent; and 1974, 24 per cent.

What difference does all of this make? My concern is not the few sentences in the Helsinki document, sentences which no one is likely to pay much attention to, but that this may show a lack of concern, a turning inward by our citizens, that cannot be good.

If, prior to the tragedy of Vietnam, we had

few hundred more Americans who spoke Vietnamese and were in contact with the people there, it's possible we could have avoided the devastation of that war. Why do our friends from Germany and

Japan and Sweden sometimes sell more products in other nations than we do? Sometimes the answer is fairly simple: they speak the language of the buying country and we do We are living in a world that grows smaller and smaller. We in Southern Iilinois or Wash-ington, D.C. are closer today to any point on the globe than our northern colonies were to our southern colonies when our nation was

If we are to build a world of peace and stability, people will have to talk to one an-

That means that some of those beyond our borders will have to learn English, and some of us will have to learn their languages

We will be enriched-both culturally and economically-if we do.

RETURNING GOVERNMENT TO THE CABINET AND TO THE PEOPLE

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. HARRIS. Mr. Speaker, I am introducing legislation today that addresses a major reorganization and policy issue the new administration must face-the organization of the White House staff. This legislation would reduce the number of White House personnel and would ground firmly in law the President's and Vice President's staff.

LAW FOR WHITE HOUSE STAFFING INADEQUATE

Existing law authorizes for the President six administrative assistants and eight other secretaries or assistants in the White House office-14 people. I do not think many would quarrel with the notion that the figure of 14 employees in the White House is a little out of date. The situation then is that there is no legislative authority for most of the White House staff and for some of the administrative expenses of the President. PUBLIC FUNDS SHOULD BE APPROPRIATED FOR

CLEAR PURPOSES

Because of the absence of adequate legislative authority, the annual appropriations for the White House have in recent years become subject to a point of order in the House of Representatives. because clause 2 of House rule XXI provides that no appropriations for any expenditures not authorized by law shall be in order. And the chairman has sustained these points of order, thus eliminating White House funds from the annual Treasury, Postal Service, and general Government appropriations bill in the House. On June 14, 1976 I raised a successful point of order against the 1977 White House appropriations; the funds were knocked out by the House, but restored by the Senate.

I will continue to question the wisdom of appropriating public funds that have not been authorized, because I believe that Congress is acting irresponsibly if it approves funds for purposes not clearly authorized in law. In other words, I believe that this Congress would be ducking its responsibility by spending the people's money without first determining for what purposes these funds could be spent. I am not pointing a finger at any particular individuals-we are all responsible for this situation. What I am saying is that this Congress must serve the public's interest. We cannot write "blank checks" with taxpayers' money.

question for the Congress is one of legislative integrity.

CABINET GOVERNMENT; NOT WHITE HOUSE STAFF

The other major concern this legislation addresses is "Who runs the Government?" In the last two decades, the White House staff has essentially grown unchecked to somewhere between 500 to 600 people; no one really knows the precise figure. Some growth of course is justified, because the times become more and more complex and the decisions the President must make require expert staff assistance. I am not sure anyone has an ideal number that we could pull out of a hat and say, "This is how many people ought to work at the White House." 'I do not pretend that the number in this -401—is in any way a magic number.

My concern is with the concentration of power in the White House. Watergate taught us too painfully about how power and the inherent dangers of an unelected "palace guard." We must not let Watergate quietly fade from our memories and be party to conditions that might give rise to "another Watergate." We must make sure that never again will we let Government slip away from the people and become concentrated in the hands of a faceless few behind the White House walls.

It is time to return our Government to our President and his Cabinet officials, where decisionmaking belongs. These officials serve at the pleasure of our elected President and are subject to confirmation by the Senate, elected officials. These are the people who are held accountable and who should be running the executive branch-not a few unelected, inaccessible advisers and executive assistants surrounding the Chief Executive.

Thus, the bill addresses what I think is a fundamental Government reform question; it goes to the very basic framework of our Government. It places firmly in law some parameters on the number and level of the White House staff. And it reinvigorates our Cabinet, democratic form of government.

WHAT THE WHITE HOUSE STAFFING BILL DOES

This bill authorizes 401 positions at the White House, which is approximately a 30-percent cut from the 1977 level. The 30-percent reduction implements the President's pledge to reduce the White House staff by this percentage.

An important feature of the bill is that it would not allow the White House staff to become top-heavy with high-paid policy people. In other words, currently, the President and Vice President can hire as many individuals, at any pay and/or grade level, as funds will allow. This bill tries to bring some order to the grade and salary level of White House personnel. For the President, it allows 44 Executivelevel staffers, 21 supergrades-GS-16 to 18, and 336 people below GS-16. For the Vice President, the bill authorizes five executive-level individuals, five supergrades, and 12 at GS-15 and below. I believe that these three groupings place some reasonable limits on the number and nature of White House personnel and at the same time give the President and Vice President the flexibility they need.

The bill sets a dollar limit and a 3-year authorization for consultants, for the

purchase of goods and services for the Executive residence, for the "unanticipated needs" fund, for the President's travel, and for entertainment expenses. Expenditures for these purposes are not now authorized or the authority is out of date. The bill includes strong accounting and reporting provisions to the Congress as well as authority for auditing by the General Accounting Office.

Another important feature of the bill is provision dealing with individuals detailed to the White House from Federal agencies. Under existing law, Federal employees can be detailed to the White House. I believe that this is necessary. because often career civil service employees have expertise needed by the President. There is, however, a loophole in the law now so that while the employee is working on detail at the White House, the agency still pays that employee's salary. I think this is wrong and have included in my bill a provision that requires the White House to reimburse agencies for the pay of detailed employees.

> ATTEMPTS IN THE 93D AND 94TH CONGRESSES

In both the 93d and 94th Congresses, White House staffing legislation was considered. In the 94th Congress, H.R. 6706 was reported by the Post Office and Civil Service Committee and passed by the House. That legislation died in the Senate. The House Post Office and Civil Service Committee, on which I serve, is very familiar with White House staffing legislation and keenly aware of the need for a strong law. Hearings are scheduled on this bill, next week on April 26. I feel confident that the committee will act quickly to report out a bill to the full House. In fact, because of the May 15 budget deadline for reporting all authorizing legislation, we must act quickly.

The President has frequently in his public statements shown his sensitivity to the problems created by centralizing power in the hands of a few anonymous individuals. He has a deep respect for our Cabinet form of government. I am sure he is well aware of the need for this legislation.

I believe that this presents an important challenge for the 95th Congress and the new administration. It is the vehicle for the Congress to fulfill its responsibilities by delineating in law specifically how public funds will be spent. It will stop this practice of doling out \$16 million for purposes unknown and unwritten. It will bring some order to White House staffing and provide an added safeguard for our system of government, a notion with which I am sure our new President agrees. With this bill, we can help get both the Congress and the White House back on the right track.

TRUTH IN CONTRIBUTIONS

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. LEHMAN. Mr. Speaker, on January 4, I introduced H.R. 478, the Truth in Contributions Act. This legislation, with one minor difference, was also proposed in the 94th Congress at a time when public attention was focused on the unethical practices of some charitable institutions. Although much of the publicity has diminished, the need to correct abuses remains.

Americans are a generous people, and this generosity is reflected in the official encouragement which is provided by the Federal Government in the form of our tax policy. Charitable institutions can qualify for tax-exempt status and contributors are allowed to deduct their gifts from their incomes for tax purposes.

Presently, charitable organizations are allowed to keep their tax-exempt status as long as their primary activity is to carry out the purpose for which they they were granted the status. This requirement is entirely too vague to be effective. The IRS does not have adequate guidelines for determining whether or not the organization is in fact primarily engaged in its tax-exempt purpose. My bill would strengthen this requirement by providing that such organizations must distribute at least 50 percent of their gross revenues for charitable activities.

In the past, we have seen cases where fundraisers have absorbed 90 percent of the funds raised for charity. Only 10 cents of every dollar contributed actually went to help the sick or needy. If potential contributors were aware of such ratios, it is likely that the money would go elsewhere. It is only natural that contributors would prefer to see more of their money helping people instead of paying administrative costs.

In the even that an organization covered under this act does not distribute 50 percent of gross revenues for charitable purposes within the taxable year. tax sanctions are to be imposed. An initial tax of 15 percent of the amount of expenditures for charitable purposes which would be required to bring the organization's charitable expenditures to the 50-percent level would be the first type of sanction. If the charity does not then comply within a correction period of 90 days, an additional tax is imposed amounting to 100 percent of undistributed revenue.

The types of public charities which would be affected by this legislation include those for which contributions are deductible for donors up to a limit of 50 percent of their adjusted gross incomes and which organizations normally receive a substantial part of their support from Government units or from contributions from the general public. Excluded from this legislation are churches, educational institutions, hospitals, medical research organizations, and certain governmental units and private foundations and organizations whose purpose is to "receive, hold, invest and administer property and to make expenditures to and for the benefit of a college or university." In addition, this act would only cover charities which have more than \$25,000 gross revenue.

Other provisions of the Truth in Contributions Act include disclosure requirements, rules for civil action and criminal penalties. One change which was made in the legislation as originally introduced by former Congressman Karth and Vice President Mondale in the 94th Congress involves accounting procedures to be used in compiling the charities' annual reports. Rather than using standards prescribed by IRS, certified public accountants may utilize generally accepted accounting principles or standards.

Mr. Speaker, it is not my intention to discourage charitable contributions. Most charitable agencies are legitimate, ethical, and beneficial. They deserve the continued help and support of our present tax laws. Some organizations, however, abuse these privileges by failing to spend a major portion of the receipts on their prime purpose; namely, helping those in need. By spending an excess amount of money on fundraising, administrative costs or individual salaries, they hurt the cause of charities which do not engage in these practices. Through this legislation, we can renew the confidence of the American people in charitable organizations and continue to encourage their tradition of generosity.

GROWING ABUSE OF CONGRES-SIONAL STATIONERY

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. BEDELL. Mr. Speaker, with the adoption of the Obey reforms and other achievements such as requiring recorded votes on future pay raises, the 95th Congress has taken the first steps toward earning renewed respect by the public. However, this process of building faith is never ended, and we must constantly look for ways to conduct the business of Congress in a more forthright fashion.

In that spirit, I am today introducing legislation to outlaw what I consider to be a growing ethical problem—the misuse and abuse of congressional stationery by private interest groups with the obvious intent of misleading the public. My bill would outlaw all private uses of congressional stationery, or any stationery indicating that an individual is a member of Congress, the assignment of such a member to a congressional committee, or the official office address where a member conducts any congressional business.

The time has come to limit the use of congressional stationery to purely official business. For too long, individual members have allowed pressure groups they agree with to make use of their official letterhead in direct mail solicitations for funds and political support. Clearly the intent of such letterhead is to convey the impression to the public that the mailing is sanctioned by Congress or is in line with a member's official duties. Often the recipient of these mailings is left confused, or with a lowered opinion of Congress as a whole.

This problem came to my attention by just such people in my district, who were concerned enough to contact me about a mass mailing sent out by the National Right to Work Committee, headquartered in Fairfax, Va. The mailing, which solicited funds for the group, was printed on the letterhead and bearing the signature of a member of the 94th, not 95th Congress, even though it was dated "January, 1977".

I single out the National Right to Work Committee since this group has made frequent use of congressional letterhead to add legitimacy to its mailings, though I am sure others have from time to time done likewise. I support the right to work principle, but I certainly do not support efforts which could be deceptive to the American people.

The recently passed reforms make this piece of legislation a logical next step. We have banned private office accounts and the use of private funds in the carrying out of any official business. Thus only appropriated funds should be used to print up or purchase such stationery, and any use of private funds would be a clear violation, under this bill.

Let us proceed to make it clear to every citizen that when he receives a piece of mail bearing the words "Congress of the United States", with the characteristic listing of a member's name and district, that he is receiving a letter from the office of his congressman, and not some pressure group out to raise funds. By enacting this bill, we can take another step in clarifying the image of Congress in the public's eyes, and in separating the political activities of an individual from the official business of an elected official.

Following is the text of this legislation: H.R. 6289

A bill to amend title 18, United States Code, to prohibit Members of the Congress from using official congressional stationery in mass mailings for any purpose other than official congressional business

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 93 of title 18, United States Code, is amended by adding at the end thereof the following new section:

"§ 1924. Unofficial mailing of mass mailings containing official congressional stationery.

"(a) Any Member of the Congress who mails or authorizes any person to mail any mass mailing containing any official congressional stationery for any purpose other than official congressional business shall be fined not more than \$5,000.

(b) For purposes of this section-

"(1) the term 'mass mailing' means the mailing of newsletters, and similar mailings including more than 500 pieces of mail in which the content of the matter mailed is substantially identical, but such term shall not include any mailings-

"(A) in direct response to inquiries or requests from the persons to whom the mat-

"(B) to one or more Members of the Congress or to one or more Federal, State, or local government officials; or

"(C) of news releases to any communica-

tions media;

"(2) the terms 'Member of the Congress' and 'Member' means any Senator or Representative in, or Delegate or Resident Commissioner to, the Congress of the United

"(3) the term 'official congressional business' means the conduct of official business activities, and duties of the Congress regarding all matters which directly or indirectly pertain to

"(A) the legislative process;

"(B) any congressional representative function:

"(C) the functioning, working, or operating of the Congress; or

(D) the performance of official duties in connection with any matter referred to in subparagraph (A) through subparagraph (C); and

"(4) the term 'official congressional stationery' means any stationery, whether or not such stationery is prepared with Federal funds, with a letterhead or similar printed device which contains the name of a Member of the Congress and information indicating

"(A) that such Member is a Member of the

Congress;

"(B) the assignment of such Member to committee of the Congress; or

"(C) the address of any office at which such Member conducts any official congressional business."

(b) The table of sections for chapter 93 of title 18. United States Code, is amended by adding at the end thereof the following new

"1924. Unofficial mailing of mass mailings containing official congressional stationery.

SEC. 2. The amendments made by the first section of this Act shall apply with respect to mass mailings mailed on or after the date of the enactment of this Act.

A FAIR LOTTERY CANNOT CHANGE AN UNFAIR DRAFT

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. STEIGER. Mr. Speaker, Peter Ognibene had an excellent article in the April 12, Washington Post, outlining the unfairness of the draft. The article, "A Fair Lottery Cannot Change an Unfair Draft," points out just how inequitable conscription is.

Ognibene, a contributing editor to the New Republic, properly refers to the draft as "a tax." As he says:

That is the central reality of conscription. It takes the labor of 19-year-olds at less than competitive wages to relieve the rest of us of a few dollars' tax burden.

He notes that the fading memory of conscription has caused many to forget just how unfair the draft was. Also forgotten by many is the national turmoil it created.

One other point often overlooked is that the military is getting sufficient numbers of volunteers for active duty, and the quality of recruits is improving. Ognibene points out that the male high school graduate volunteers rose from 67 percent of accessions in 1975 to 70 percent in 1976.

His article is a very good one. It merits the thoughtful consideration of all who read the RECORD. The article follows:

A FAIR LOTTERY CANNOT CHANGE AN UNFAIR DRAFT

(By Peter J. Ognibene)

The draft was supposedly laid to rest four years ago, but the corpse keeps twitching. In his first visit to Capitol Hill after he was sworn in as Secretary of Defense, Harold Brown told the Senate Armed Services Committee that he favors a Pentagon proposal 'to have a standby draft capability

The chairman of that committee, John Stennis (D-Miss.), responded with an even stronger pitch for conscription. "Like it or not," he said, "we're going to have to go back to the Selective Service System for obtaining some of our men. The quicker we realize that and get it to the people so they know it, the better."

More recently, Sen. Sam Nunn, the Georgia Democrat who chairs that committee's panel on manpower, argued in these pages "the All-Volunteer Force (AVF) may be a luxury that the United States can no longer afford." He contends that "the AVF has lived up to few of the expectations of its early proponents" and suggests "the government should begin now to explore possible alternatives to the AVF, such as a national service program for all our nation's young people.'

Although the volunteer army does not work perfectly—what in government does?—the military has been getting sufficient numbers of volunteers for active duty. Moreover, the quality of those recruits has been steadily rising. In 1975, for example, 67 per cent of the male volunteers were high school grad-

uates. Last year the percentage was 70.

The present "success" of the volunteer army is linked, no doubt, with the "failure" of the economy to provide civilian jobs for young people. High unemployment rates and recent military pay raises have made marching for Uncle Sam a relatively attractive proposition.

Equally important, but too often ignored by draft advocates, the armed services provide a route of upward mobility for some of society's least advantaged individuals. The military affords them an opportunity to learn skills with which they can earn a livelihood in or out of service.

But because financial incentives have helped make the volunteer army successful, some critics regard these recruits as "mercenaries." What they fail to realize is that conscription itself is an economic institution.

The draft is a tax. Indeed, that is the central reality of conscription. It takes the labor of 19-year-olds at less than competitive wages to relieve the rest of us of a few dollars' tax burden. The government does not give businessmen patriotic appeals; it pays them the going rate for everything from fighter planes to floor wax. Should it do less for servicemen?

Because conscription is now a fading memory, it is easy to forget just how unfair the draft was. Millions managed to escape military service by getting deferments for college, critical occupations or parenthood. Although the draft lottery closed most of these escape routes, it could not eliminate the fundamental inequity; selectivity.

Any selection process that inducts some young men into the military but requires nothing of others is by its very nature unfair. Eliminating deferments and establishing a lottery did not do away with selectivity. It merely changed the way in which the few were chosen from the many.

Moreover, selectivity does not end with induction. It continues within the armed forces. While the college student may not able to escape service when selection is by lot, he stands a relatively good chance of avoiding hazardous duty in time of war. Because he will probably score well on Army classification tests, he is more likely to wind up behind the lines as a clerk or technician. The less educated become foot soldiers

In other words, a fair lottery cannot change an unfair draft.

Universal service is not the answer. For one thing, there is the problem of numbers. Some four million Americans turn 18 every

year. The active and reserve forces can use, perhaps, 700,000 of them. What would the rest do?

Put them to work on public projects and you take jobs away from individuals with families to support. The cost, which would run into tens of billions of dollars, would swell an already large budget deficit and produce a small economic return. An underpopulated and embattled country such as Israel may need universal service to survive: the United States, fortunately, does not.

But above all, the draft violates the principle on which this nation was foundedthe preservation of individual rights and liberties. Thus, conscription should be used only as a last resort. Short of an all-out war requiring huge armies in the field-an unlikely prospect when one nuclear weapon can wipe out several massed divisions can be no compelling case for the draft.

CATHY RUSH, OUTSTANDING COACH

HON. RICHARD T. SCHULZE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. SCHULZE. Mr. Speaker, I am proud to share with my colleagues the accomplishments of Cathy Rush, a young woman from my congressional district who has announced her resignation after 7 years as head coach for woman's basketball at Immaculata College. This brings to an end an era marked by three national championships, two secondplace trophies, and in 1977, fourth among American women's colleges. Her overall record was 149-15.

Although she built the women's basketball program at the Chester County school into a national powerhouse and brought extraordinary fame to Immaculata College, Cathy's greater contribution was her influence on the people she worked with and the fact that she excelled in her area of expertise. Her personal success became the success of Immaculata, Chester County, the basketball team, the Commonwealth of Pennsylvania, and women's basketball.

She herself sums it up best:

We pioneered basketball together and climbed to the top. What Immaculata has done for women's basketball—indeed for women's athletics in general-can never be duplicated or diminished.

The list of accomplishments that Immaculata College's basketball team obtained under Cathy Rush's guidance are endless; the Suburban & Wayne Times highlighted them in a recent article:

During her seven years as coach, she compiled a record of 149-15, with a winning percentage of over 90 per cent.

Won three national titles (1972, 73, 74) and

finished second two years (1975, 76).

Coached three All-Americans, Theresa Shank Grentz, Marianne Crawford Stanley, and Mary Scharff.

Saw the Macs compete in six straight national tournaments.

Won five consecutive regional titles, finish-

ing second the first year.
Continued to have an influx of fine ballplayers despite the fact Immaculata offered no scholarships such as the larger schools. Most of the players coming to Immaculata were forced to work two jobs or even more in the summer to counteract expenses for tuition at the school.

Saw the Macs compete in the first nationally televised women's game against Maryland in 1975 at the Capitol Center in Landover, Maryland.

Coached the first women's team to play in Madison Square Garden and this season the first to compete in an all-women's doubleheader at the Garden.

Coached the first women's team to ever play at the Spectrum in Philadelphia.

Has served on the United States Olympic Women's Basketball Committee.

Coached the USA Pan-Am Team to a gold medal in the 1975 games at Mexico City.

Named "coach of the year" by Womensport magazine in 1975. Twice named (1973-74) to the same honor by AMF Corporation.

Has seen former players turn to coaching upon graduation, including Rene Muth Portland (St. Joe's), Theresa Shank Grentz (Rutgers), and Marianne Crawford Stanley (Immaculata assistant).

maculata assistant).

Has had three assistant coaches take head coaching jobs: Pat Walsh at Princeton, Dottle McCrea at Stanford, and Mary DiStanislau at Northwestern.

One of the top speakers for Eastman Kodak company, which sponsored coaching clinics throughout the United States.

Established a women's basketball camp in the Poconos, one of the top camps in the country which draws over 200 youngsters weekly during the summer.

Recently completed the first women's basketball instructional book for high school players and is currently working on a coaching publication with former assistant coach Mary Ann Eganotovich.

Cathy will be missed; no one can fill the void left by her resignation for her influence extended beyond the basketball court. Immaculata College President Sister Antoine explains—

Cathy had an extraordinary impact on the people at Immaculata. What better role model for young women than a talented, intelligent, accomplished leader who also possessed the finest human qualities of compassion, concern and understanding.

She is an image for all young women today.

BUSINESS USE OF RESIDENCES FOR DAY CARE SERVICES, H.R. 3340— PERSONAL EXPLANATION

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. OBERSTAR. Mr. Speaker, on Monday, April 18, due to inclement weather my flight from Duluth, Minn., to Washington, D.C., was fogged in and consequently I was unable to vote on H.R. 3340, Business Use of Residences for

Day Care Services. However, had I been present I would have voted "aye."

The exclusive use provision in the 1976 Tax Reform Act would have dealt a severe blow to hundreds of day care providers in my district, and to thousands of other providers across the Nation. To meet the exclusive use test, family day care providers would have had to isolate that portion of their home used for day care and keep their own family out of that portion of the home during nonbusiness hours. This would have

proven unworkable at best and would have distorted the concept of family day care service, and imposed an unreasonable burden of paperwork and redtape, which Congress never intended.

The bill as passed allows family day care providers to continue to deduct expenses allocable to the business use of the residence without undermining the intent of the business deduction reforms of the 1976 Tax Reform Act.

DR. RICHARD WAINERDI OF TEXAS A. & M. UNIVERSITY RECYCLES NAZI SECRETS ON ENERGY

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. TEAGUE. Mr. Speaker, Time magazine for April 18, 1977, contained an interesting article on technology concerning the process of making oil from coal. Apparently the Nazis during World War II perfected this process, but because of the cost abandoned it.

Now, some 30 years later, a professor at Texas A. & M. University by the name of Dr. Richard Wainerdi together with a historian by the name of Arnold Krammer have located about 300,000 documents relating to the process. The article follows:

RECYCLING NAZI SECRETS

If the U.S. is in an energy bind, consider the one that Nazi Germany faced in the 1930s: it prepared to fight a world war with no secure reserves of oil at all. The Germans' solution was to make oil from coal, and they did that so successfully that after 1944 (when oil supplies from Nazi-aligned Rumania were bombed out) the Luftwaffe planes flew, and the Reich tanks rolled, almost exclusively on coal-derived gasoline. Could the Nazi know-how help the U.S. three decades later?

The question occurred to Professor Richard Wainerdi, a chemical engineer at Texas A.&M. He and a colleague, Historian Arnold Krammer, set out 18 months ago to look up what was known about the German synthetic-oil program. It proved an unexpectedly arduous task

Not for lack of documents. Because the Germans were compulsive record keepers, the entire history of the program—plant diagrams, patent descriptions, detailed reports on which catalysts and additives work best, even the monthly reports of Hitler's 25 oil-from-coal plants—fell into American hands at the end of the war. But crude oil was available then in ample supply at \$2 per bbl., and the man-made oil cost up to five times as much. So the German documents were filed and forgotten. Wainerdi and Krammer found some of the papers in the National Archives in Washington and others stuffed into crates in Government buildings around the country. Until the two men came along, the documents had lain unterested for 20 years.

touched for 30 years.

The Texas A. & M. specialists have located about 300,000 documents, only 15% of which had been catalogued after the war. Dow Chemical, Union Carbide and Diamond Shamrock will help underwrite the massive job of collating all the information and feeding it into a computer at the federally run Oak Ridge Energy Center, where it will be available to anyone who wants it. Already some interesting findings have turned up.

For example, German scientists discovered a method of capturing the sulfuric acid released by coal when it is turned into oil; that could point to an important pollution-control technique.

The basic technology for turning coal into oil or gas is known to just about every chemistry graduate student. But until now, it has been considered uneconomic—though a plant built in South Africa with the help of German scientists has been turning out gas from coal for more than 20 years, and some American companies are planning their own installations. Wainerdi and Krammer hope that the Nazi documents will show the way for other firms to avoid whatever mistakes the Germans made and design plants more efficiently. Says Krammer: "Why reinvent the wheel?"

WATER CONTRACTS SUBJECT TO PUBLIC REVIEW

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. MILLER of California. Mr. Speaker, I am introducing today legislation which would provide for public notice and public hearings prior to the approval of water service contracts by the Secretary of the Interior or his representative.

The necessity for this reform legislation has been illustrated in the operation of certain projects in my home State, California, and these cases point to the need for overall correction. Currently, representatives of the Department of the Interior can, and have in recent years. circumvented both congressional and public review of contracts which substantially increase water commitments. In one particular case, a district in-creased its water supply from 1.15 million acre feet to 1.3 million acre feet with no official public notice, disclosure or review. And, unbelievably, this increase occurred during congressional oversight hearings on a long-term amendatory contract which had drawn immense opposition precisely because it contained increases in water service commitments.

This legislation does not force the intrusion of third parties into contract negotiations. It would afford other parties with whom the Bureau of Reclamation signs water service contracts, and other interested parties, an opportunity to know of and comment upon such amendatory or interim contracts before they are "faits accomplis." Recalling the 200,000 acre feet interim commitment made secretly last year, we ought to remember that just 30,000 acre feet retained in a reservoir last year during the drought in 1976, could have replenished reservoirs and eliminated the need for rationing in the worst-hit area of the State, the Marin Municipal Water District this year, according to a recent editorial in the S.F. Examiner April 17,

This bill represents good public policy and is in the spirit of the sunshine legislation which has such widespread support across the Nation. It is founded on the principle that public resources ought not be committed for private pur-

poses without potentially affected individuals having the opportunity to be notified and comment upon such decisions. This legislation should receive swift attention and passage.

BROTHERHOOD

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 19, 1977

Mr. SOLARZ. Mr. Speaker, brotherhood is a word we often hear. It represents a mindful awareness of the notions of kindness, consideration, fellowship, fraternity, and understanding. All too often in today's world the fulfillment and realization of brotherhood is a forgotten theme, put aside by the sometimes harsh realities of everyday life.

It is my pleasure to submit for the RECORD, samples of the unmolested idealism of our Nation's youth regarding the concept of brotherhood. Hopefully, the vibrant, loving thoughts of these children from the Kensington School, located in my district in Brooklyn, N.Y., will serve as an inspiration and a reminder to all of us of what brotherhood really means:

WHAT BROTHERHOOD MEANS TO MY HERO AND ME

Brotherhood means doing things in a nice way. If you want a friend you must be a friend. Brotherhood is loving someone a great deal. Brotherhood is caring for someone too. Brotherhood is being thoughtful and being peaceful. It means joining together with different races.

My heroes are my parents. They are my heroes because they saved my life many times. They use their brains instead of using violence. My mother tries to talk things over with me. My parents take good care of me. They expect me to always think of brother-

When I grow up, I am going to be a doctor. I am going to be a good one. When someone comes in my office all beaten up, I will say "next time think of brotherhood."

TRACEY SPENCER, Class 6-511.

What Brotherhood means to me is respect for those of a different color or nationality. Just because they are different from you does not mean that you should treat them any differently than you would want to be treated yourself.

Brotherhood means to me men and women joining together as one group. If they don't the world won't be peaceful. That is what Brotherhood means to me.

My Hero is Wonder Woman because she always teaches justice. Most times she saves the world. She is beautiful.

Luis Boneta, Class 5-407.

To me brotherhood means a person helping another person. It's a person sharing something. It's a rich person going to all those countries and getting those poor kids who eat mush. It's not a white person calling a black person nigger. Or just the opposite. (And I just happen to be black.)

I'm not sure what brotherhood means to my hero, but I think it's different. I don't mean she would call a white person whitey, or want to be called nigger. I mean to me everyone thinks brotherhood means different things. My hero is my oldest cousin Corigan. She is kind and helpful. She is nice to everyone.

COURTENY MOORE, Class 4-409.

My hero is my father because he does all kinds of things for me. My father taught me to like people because of how they treat others. He taught me that it does not matter what they look like or what their name is. Everybody should be friends and there are hardly any excuses for not being friends with each other. That's what brotherhood means to both my father and me.

MICHELE DONNELLAN, Class 2-306.

Brotherhood is caring and loving and sharing and helping people. Brotherhood is being nice to old people and Brotherhood is being nice to your family and being nice to your friends. Also lending your toys to your friends and respecting your elders and being nice to people you don't know. My hero is the six million dollar man and he thinks that Brotherhood is kindness and happiness and sharing and caring.

LESLIE FELICIANO, Class 4-411.

My hero is Captain Kirk of the U.S.S. Enterprise. He might not be a real person, but he would make a good one. When he spots an enemy, he avoids killing unless absolutely necessary. He makes friends with people of other worlds. He is deeply concerned with the welfare of his crew. He would risk his life for another person. He is an outstanding officer in war and peace.

Brotherhood is concern for other people. This would help people do things together which would mean world wide peace.

GREGORY HOFFMAN, Class 6-512.

My hero is my sister (Glenda). If you ever met her you'll know why I picked her. Now down to business: to me and Glenda brotherhood means being generous, caring for people, peace, and love. Brotherhood is when you can walk up to a stranger and shake hands, and the stranger can do the same. Brotherhood is when you can get a job not because of your race but because of your talent! That's what Brotherhood means to me and my hero. "And crown thy good with brotherhood from sea to shining sea."

ANGEL SCOTT, Class 5-401.

IMPROVEMENTS NEEDED IN FOOD DISTRIBUTION FOR SCHOOL LUNCHES

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. GEPHARDT. Mr. Speaker, today I am introducing legislation designed to correct problems in commodity distribution under the national school lunch program.

The school lunch program has been extremely effective in assuring the children of this country get at least one square meal a day at a reasonable cost, or no cost if they come from families that are especially needy. The nutrition provided is important for protecting their health as well as improving their ability to learn

Unfortunately, however, growing evidence shows that distribution of commodities for school lunches has been poorly administered. Discussions with school officials in my district in the St. Louis area and a General Accounting Office report issued in January included many accounts of school district receiving deliveries that are unappealing, badly timed and inappropriate for their needs and facilities. If this situation is allowed to continue, it could cripple a program

which has been so beneficial for the health and well-being of the Nation's children and has helped assure adequate incomes for farmers throughout the country.

In my own district, the most serious problem has been the development of massive inventories of some products which will never be exhausted without waste or spoilage. One school district, for example, has on hand a 2½-year supply of peanut butter and a 2-year supply of orange juice. Many districts in the St. Louis area have massive quantities of ground beef, forcing them to serve it three, four and even five times a week.

Other school officials have reported to me that commodities are often unsuitable, a condition the GAO found to exist in other areas of the country. The result is either refusal of the food, resulting in reduced Federal assistance, or increased processing costs. For example, GAO found the Cleveland school district refused over 15,000 pounds of beef patties because the district does not have personnel or equipment for cooking them. Beef patties also deny districts flexibility for varied use of ground beef.

Inconvenient container size also results in increased costs, if not waste and spoilage. For example, the GAO found small containers of orange juice created additional processing costs in both the Cleveland and Philadelphia school systems. Once Cleveland was able to get the product in larger containers, GAO found its processing costs dropped about \$20,000. On the other hand, officials in one of the school systems in my Congressional district complained that butter comes in such large blocks, a portion of it spoils before the whole block can be softened enough to be usable.

Another major problem reported by GAO and confirmed by school officials in my district is the poor timing of commodity deliveries. Some come so late in the school year that the large quantities of food have to be stored over the summer or repetitive servings are required to reduce inventories before the school year ends. Sometimes the deliveries are just ill-timed and are consistently without adequate notice. One Pennsylvania district reported that as soon as the district purchased a 3-month supply of food locally, a Federal allocation of the same items would be received.

In contrast to the operation of the school lunch program in my home State of Missouri and elsewhere, is the experience in Kansas, where cash in lieu of commodity assistance for school lunches has seemed to be advantageous. In that State, GAO found most school officials reported they could buy more food with cash than they received under the commodity program. They have been able to serve a wider variety of food, making the menus more desirable and cutting down on plate waste. Furthermore, their purchases have been better suited to their needs and facilities, thereby lowering storage and processing costs.

Officials of the Kansas City, Kan., school district reported a total annual savings of over \$26,000 since cash assistance replaced community donations for school lunches. A suburban district, Shawnee Mission, has saved \$42,000 per

year in freight, storage and delivery costs since the cash program was implemented.

Preliminary findings of a study underway at Kansas State University comparing the cash system in Kansas with the commodity system in Oklahoma, show administrative costs for the Kansas school lunch program are one-quarter those for Oklahoma.

On the other hand, some reports claim the quality of food used in Kansas lunches is inferior to that provided by the Federal Government, which evidence shows to be extremely high.

In my view, the findings of the Kansas State and the GAO studies, as well as the many problems which have come to light about commodity assistance, warrant careful and constructive action. Cash in lieu of commodity assistance deserves more complete analysis to determine whether it would damage our agricultural programs which are designed to assure just and adequate incomes for farmers through price supports and surplus removal.

The bill I am introducing today, therefore, gives the Secretary of Agriculture authority to undertake pilot projects to seek more efficient methods of operating the school lunch program. In particular, one such project would test the feasibility of giving school districts within specified States the option of all cash assistance in lieu of commodities. The Secretary would be required to report to the Congress on his findings from the pilots as to their impact on nutrition provided, administration of the program, savings derived at the Federal, State, and local levels, quality of food served, ability of the Government to assure adequate incomes for farmers, and reduction of plate waste

For a constructive analysis of the benefits and disadvantages of the statewide cash option, I will be asking the Comptroller General to undertake a comprehensive comparative study of the operation of the school lunch program in Kansas and a sister State. The GAO examination will, hopefully, include not only cost comparisons but also quality comparisons.

In the meantime, many administrative improvements should be made in the school lunch program as presently authorized. My bill, therefore, directs the Secretary to establish procedures designed to assure distribution of commodities is responsive to the needs and preferences of participating school districts and is carried out in a timely manner with adequate notice. The Secretary would also be required to provide for systematic review of the costs and benefits of providing commodities and to make available technical assistance on the use of commodities.

The national school lunch program has made an outstanding contribution in promoting adequate nutrition for the children of this country. To continue the benefits of the program, it is important that we in the Congress make sure it is operated in a manner that will maximize those benefits while minimizing the costs. The evidence shows that the present administration of commodity assistance for

school lunches, in many respects, incurs unnecessary costs for both the Government and school districts while lowering nutritional benefits by fostering plate waste. Enactment of the improvements and the pilot authority included in my bill can help us find the changes most appropriate for realizing the full potential of the school lunch program.

FOOD DAY

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. ROSENTHAL. Mr. Speaker, this Thursday, April 21, is the third national Food Day. The purpose of Food Day is to discover how the food we eat affects our health, to discuss the American diet, and to teach Americans more about good eating habits.

The theme of Food Day this year is nutrition. Hunger and malnutrition, government programs, the role of agribusiness in food prices, and the scarcity and distribution problems will be the focus of many events around the Nation.

One goal of Food Day is to educate Americans about the variety of problems connected with our food supply: High prices, chemical additives, world hunger, and the corporate role. Community groups throughout the country are in the process of organizing campaigns to bring action on food issues. These include special classes, teach-ins, debates, TV and radio shows, fasts, and cooking demonstrations. Many citizens will be organizing antihunger groups; lobbying for people-oriented food programs; opening community canneries, farmers' markets, urban gardens and co-ops, and supporting family farmers by protecting their farmland from development.

In a country like ours where good foods are abundant, far too many persons suffer from diet-related diseases. Many Americans are being ripped off economically and nutritionally by unwholesome junk foods in vending machines. We are eating too much sugar, fat, refined flour, and overprocessed, engineered foods. More nutritious products, including whole grains, nuts, fruits, vegetables and grass-fed meat, should be introduced into the American diet. Most are adaptable to vending machines. A healthy diet is one key to a longer and happier life.

There are ten basic Federal food programs, yet they reach only a small percentage of the eligible persons. These programs, which include food stamps, meals for the elderly, school lunch and breakfast programs, and nutrition education in clinics and schools, must be brought into more communities and made available to all eligible citizens.

One of the national Food Day events, the Conference on World Hunger and U.S. policies sponsored by Senator Mark Hatfield and the Center for Science in the Public Interest, will be taking place right here in the Congress. Panelists will discuss such topics as the effect of U.S.

policy on malnutrition, the impact of multinational corporations' agricultural investments on a country's nutritional situation, and the causes and relation of hunger in the United States and in the Third World.

This is the third national Food Day, and it promises to be as interesting and successful as the previous ones. Thousands of individuals and organizations across the nation are participating in special Food Day programs. Hopefully, the concerns of all these people will have an effect on all levels of government, and more responsive and responsible food policies will be the result.

SAVINGS AND LOAN LEAGUE AT WORK IN PITTSBURGH ON ENERGY CONSERVATION

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, with good cause, many institutions in our society are now examining their activities with an eye toward energy conservation.

One of the most significant inquiries is being conducted by officials of the National Savings and Loan League.

League officials have recently been at work in Pittsburgh on preliminary plans for a pilot energy conservation project. They expect to cooperate with Pittsburgh business, labor and government officials in fashioning a plan to aid current homeowners and new buyers to guarantee that their houses are energy efficient.

Success in Pittsburgh will allow NSLL officials to design similar plans, honed to local conditions and local resources, in other parts of the Nation.

I am enclosing in the Record at this time an article from the league's publication, the Journal, on NSLL's energy conservation efforts.

THE IMPACT OF THE ENERGY CRISIS ON THE S. & L. INDUSTRY

(By Thomas G. Bolle, Senior Project Analyst, NSLL Office of Government Liaison, and Richard C. Knight, Vice President, Government Liaison)

Increasing concerns about energy conservation have recently been catapulted into the status of an emergency, with drought in the West, crippling cold in the South accompanied by snow, frigid conditions in the eastern half of the country including twelve feet of accumulated snow in upstate New York.

The severe weather conditions have placed a great pressure on energy supplies, particularly natural gas. Some industrial and commercial facilities have had to shut down, resulting in temporary unemployment. Schools have been closed for varying periods of time and homeowners are urged by President Carter to turn their thermostats down in order to conserve.

CRISIS HAS FOCUSED ATTENTION

The magnitude of the weather crisis has focused attention on large issues, such as the overall impact on the economy and the problems of energy supply and distribution. However, concerns of the individual homeowner and the effect that rising utility rates

have on the financial security of homes and homeowners are just as important.

This is of great importance to the savings and loan industry, the holder of approximately 60 per cent of the mortgages in this country. The recent weather conditions have only added to the problem of soaring energy prices. Over the past ten years utility bills have increased faster than any other costs directly affecting homes-in some cases as much as 150 per cent.

Mortgage lenders are already aware of the impact that rising utility rates have on the security of their investment. The increase in utility rates calls into question the traditional methods of credit evaluation for prospective mortgagors. The impact of energy costs on the ability of homeowners to meet mortgage payments is already showing up in sudden increases in bad collection figures for some industry members. These figures are not based on the recent bad weather conditions of January but on the comparatively milder months of November and December. While bad collection figures are not synonymous to total defaults, they do dramatically symbolize the problem of energy costs for the mortgage holder.

ANSWERS BEING SOUGHT

What is the answer, or is there an answer? Short of emergency action by the federal government the lender must look to local conditions and to the regulations under which he operates. There is great variety in state legislation and regulation that governs state chartered savings and loans. Similarly, the regulation of the utilities varies from state to state. In addition, the inclination of the utilities to participate in energy conservation programs also varies. For instance, in the state of Washington, the utilities are barred by regulation from financing energy conservation retrofits in single family residences. In Minnesota, one major utility is financing home owners who wish to purchase insulation. In Pennsylvania, the utilities are not now participating in any such program but some of the savings and loan associations are readily making home improvement loans down to amounts in the mid-hundreds.

LOCAL CONDITIONS DICTATE TERMS

In short, the lender must consider and operate in terms of the opportunities and constraints which face him in his industry and in light of the local conditions that exist. If any national energy conservation programs are to be forthcoming, they must recognize the differences that exist around the nation with respect to all of the factors that must be considered for an effective program. These include: climate; financing islation, regulation, and practice, utility regulation and practice; and the interrelationship of all of the various elements.

The weather that the nation has experienced may be unusual but the fact of rising utility rates is quite real and the effect of those rising rates will not pass with the spring thaw. The rise in utility rates is a reflection of existing and projected cost of continuing to supply energy for the nation. Taking into account new sources such as the North Sea and areas off the shore of the U.S. mainland, the cost in the 1980's for new facilities to produce gas and oil will range between \$10,000 and \$50,000 for an extra barrel equivalent per day. For electricity, which does not burn fuel directly, the cost of a total system, including installation as well as generation could range from \$150,000 to \$300,000 per equivalent of one barrel of oil per day.

COST WILL CONTINUE TO RISE

Such figures are hard to relate to the individual homeowners but the trend is clear. Energy in the foreseeable future is going to be expensive and the cost will continue

Both of the common alternatives for meeting our future energy needs, either by continuing to expand our capacities for power generation or by conserving energy, involve capital-intensive technology, whether it is a nuclear power plant or solar heating system. However, low level technologies are available that can be applied to existing housing in order to make homes more energy efficient. Insulation, storm windows, storm doors, heat pumps, etc., will not stop rising energy rates but they will slow the increases that the homeowner pays per month, by maximizing energy efficiency within the home. For the lender, such technical fixes do not take away the uncertainty of the effect of rising energy costs, but they can mitigate the effect and make the mortgage investment sound

IMPACT SHOULD BE CONSIDERED

Associations should consider the potential impact of rising energy costs and take a hard look at policies regarding home im-provement loans and other financing vehicles. Insulation and storm windows may not cost enough to make a loan profitable but the cost of dealing with the effects of rising energy rates may put such considerations into a new perspective. Other financing instruments should be examined as well, to see if in a given situation a particular instrument can be used that helps the homeowner meet his monthly obligations and helps the mortgage holder to insure his investment.

Part of our research has included an initial feasibility pilot study to determine if an energy conservation program for singlefamily residences is of interest on a metropolitan-wide basis. Pittsburgh was selected as the initial pilot site and meetings have been held with the various segments of the city's leadership in the hope that Pittsburgh would follow through with an energy conservation program, with the National Savings and Loan League and ERDA assisting as best fits the needs of the city and the resources of the two organizations.

In support of energy conservation measures, the National League has entered into a research contract with the U.S. Energy Research and Development Administration to identify the various financial techniques that homeowners may use to carry out energy retrofits. The League has also formed an energy committee to oversee the staff research and to participate in the final report to ERDA. Considering the fact that industry economists are projecting a \$4 billion draw down in accumulated savings due to in-creased utility costs in the current year, it behooves the industry to be alert to how our businesses are affected by the energy crisis.

CONGRESSIONAL RURAL CAUCUS ANTI-INFLATION JOB CREATION PROPOSAL

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. SIMON. Mr. Speaker, a few days ago, some of my fellow members of the Congressional Rural Caucus, headed by our esteemed colleague, John B. Breck-INRIDGE of Kentucky, spoke about their anti-inflation job creation proposal, and I wish to join in commending that proposal.

I ask all of you to consider the merits of the \$16.4 billion Congressional Rural Caucus plan to combat inflation and help produce more jobs.

Our proposal includes a little over onehalf billion dollars in grant appropria-

tions covering such areas as rural housing, community facilities, water and waste disposal programs as well as programs for rural business and industry.

We also are proposing \$15.9 billion in loan authorization levels in the same areas. Since these are loan authorizations, they require no budget outlays unless there are losses.

This proposal would use existing, proven loan and grant programs to the fullest for farm and nonfarm lending under the Farmers Home and Small Business Administrations.

Some 2 million private sector jobs could result from this initiative, which is 95 percent funded by private, nontax dollars.

It could provide a vital contribution to our economy while helping boost our rural areas.

I urge all of you to support this ruralbased plan which could have a significant impact on the entire Nation.

HELP FOR FAMILIES IN OWNING THEIR FIRST HOME

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. WHITEHURST. Mr. Speaker, the following two articles outline the problems which young families are facing in their efforts to own their own homes, and they also discuss the potential solution.

The first article is from the April 1977 Better Homes and Gardens, and was written by Margaret Daly. The second, by Richard Cobb, the real estate editor, appeared in the Norfolk Virginian-Pilot on Sunday, April 10.

I am delighted to be introducing this legislation today, and I would urge all of my colleagues to give it their consideration. Owning one's home has always been the American dream, and we now have at hand the legislative means to help make that dream a reality for many more people, even in the face of constantly rising prices these days:

HOPE AT LAST FOR FAMILIES WHO WANT THEIR OWN FIRST HOME

(By Margaret Daly)

(For far too long, the headlines have her-alded what seems like the death of a basic American dream for many young families: a home of their own. Ever-rising prices and tough financing demands have simply shut off hope for thousands of people who've been trying to take their first step into home ownership.

(Now, Senator Edward Brooke (R. Mass.) has come forth with an important bill-the Young Families Housing Act (S. 664) —which offers several creative solutions.

(This bill could bring many people into the housing market, with a result that would benefit not only those families but all of us who want to see home ownership continue as a vital part of American life.

(We support Senator Brooke's bill and hope

that you will, too.
(You can show your support by mailing the messages below to Senator Brooke and to your own senators. The debate is going on this minute, so do it now.)

There is no question that a house is still the best investment-psychological as well as financial—most families can make. (See "Is owning a home still a sound investment?" in last month's issue.) Unfortunately, first-time home seekers suffer in the very market that benefits present homeowners. Prices for new and older homes continue shooting upward, keeping a first home maddeningly out of reach for many people who want to buy. Steep interest rates add to the problem, and it doesn't look as though they'll drop—certainly not enough to compensate for rising building

Since these costs aren't likely to turn around dramatically in the near future, it's probably wise to get in on the market soon.

The problem is, many people simply do not qualify financially. For some, the impediment may be the down payment required. For others, present income isn't high enough to meet the lender's standards. Many young people face both problems. Yet the longer they wait to buy, the higher the price and probable monthly costs.

Senator Brooke's Young Families Housing Act tackles these problems in two ways that would help more young people buy their first

home sooner:

TAX-DEDUCTIBLE DOWN PAYMENT SAVINGS ACCOUNT

The Brooke bill would allow special, taxsheltered savings accounts which could be used only for building up funds toward a downpayment on a first home. Deposits in these "individual housing accounts" (IHAs) would be tax-deductible up to \$2,500 a year, with a lifetime ceiling of \$10,000. There would be penalties when funds were withdrawn for any purpose other than a down payment on a first home.

The IHA concept has several virtues. It provides a solid incentive for people to save toward a down payment on a house. It speeds up the savings process. And IHA accounts would increase funds available to the housing industry, which in turn could help lower mortgage rates overall.

MORE REALISTIC MONTHLY MORTGAGE PAYMENTS

The Brooke bill also proposes a form of graduated payment mortgage which would allow young families to make smaller monthly payments when they first take out the loan and larger payments later on.

The reasoning is that a family's income is likely to be less during the early homebuying years. If mortgage payments can be held down then, more families would qualify for financing and thus get their first home sooner. Later, when incomes are likely to be greater, the higher payments would be easier to handle.

HOW YOU CAN SUPPORT THE YOUNG FAMILIES HOUSING ACT

If you agree with us in approving the basic ideas in Senator Brooke's bill, join us in letting him know. Contact your own senators, too. Sign the letters below and send them off. Your support can really count.

Senator EDWARD BROOKE,

U.S. Senate, Washington, D.C.

DEAR SENATOR BROOKE: Too many young people who want to buy their own home are being kept from their dream by high prices and financing problems. I support your Young Families Housing Act (S. 664) and urge its passage.

(Signed) (Address)

Senator . U.S. Senate, Washington, D.C.

DEAR SENATOR—: I support the Young Families Housing Act (S. 664) introduced by Sen. Brooke to help young people buy their first home. I urge your support for the bill. (Signed) (Address)

U.S. Senate, Washington, D.C.

DEAR SENATOR ————: I support the Young Families Housing Act (S. 664) introduced by Sen. Brooke to help young people buy their first home. I urge your support for the bill. (Signed) (Address)

TAX SHELTER COULD BE CONVERTED INTO HOME

(By Richard Cobb)

A proposal to create a tax shelter for young people who save for a home of their own is being urged on the Congress.

This, and other measures to help put young families in homes, has the general backing of the home-building and savingsand-loan industries.

The tax-shelter plan is a part of the Young Families Housing Act sponsored by Sen. Edward Brooke, R-Mass.

Here's how it would work:

A person could go to a savings institution open an Individual Housing Account (IHA) which must be segregated from any other account he may have. Stipulations would be that the money could be used only for down payment on a home, and that it must be the saver's first home.

Interest accumulated on the account would be tax-exempt until the house he will buy is sold. The seller would be limited to \$2,500 per year with a lifetime ceiling of

\$10,000.

Frank N. Wood, president of Chesapeake Savings & Loan; Robert Wentz, president of the Virginia Savings & Loan, and William L. Owens, president of Virginia Beach Federal Savings & Loan, all termed the proposal a sound idea for helping the young couples who may have been priced out of the housing market by inflation.

Robert Arquilla of Chicago, president of the National Association of Home Builders, told a Senate subcommittee considering the Young Families Act that the median price of a new home has risen from \$23,400 in 1970 to \$44,400 in 1976.

A restructuring of the mortgage instrument is the basis of many measures in-tended to make housing available for the less affluent.

Generally, mortgages are granted for many years and the interest rate is fixed at the outset. Repayment is made in even, monthly installments. A provision of the Young Families Act would allow for graduated mortgage payments. The payments would be smaller at the start, then increase as the breadwinner's earning ability increased.

This is the principle of the Proxmire (Sen. William D. Proxmire, D-Wis.) bill that launched an experimental plan by the Department of Housing and Urban Development. The plan has been used widely in California but isn't legal in Virginia.

A more liberal version of the young-families plan is under study by the United States League of Savings Associations. It is considering advocating an interest-only payment plan for the first 5 years of a home

The association has a study file on another California experimental plan whereby the interest rates are adjusted periodically to reflect current prices. Since home mortgages are usually long-term arrangements, there would likely be many changes during its life.

These proposals brought mixed reactions

from area mortgage lenders.

Wentz said that any legislative acts affecting mortgages are apt to come in the form of permissive measures rather than requirements. That means that they will be slow coming to Virginia.

California is the area where pioneering

is done, he said, and Virginia's management tends to be extremely conservative. Changes are adopted only after they are successful elsewhere.

The tax exemption on IHA accounts could be a great help to the first-home seekers. Wentz said, but he added that he expects even greater relief soon. This would be a no-down-payment provision for FHA-insured mortgages, as is the case with VA-insured mortgages.

FHA now requires 3 per cent of the first \$25,000 of the purchase price down, 10 per cent of the next \$10,000 and 20 per cent of

the appraisal.

He said the average down payment is now \$13,000 and the average payoff on mortgages is 12 years.

Inflation in the housing market is the pivot on which financing turns. Wentz sees continuing appreciation of real estate as almost a certainty. Therefore, a graduated scale of mortgage payments could only help the buyer.

The increase in the value of the house between the time the buyer takes the mortgaged deed and the time he sells it will represent a large equity, even though the buyer has paid very little toward the principal, Wentz said.

The lender is protected against loss by early payoffs of the mortgage by a penalty clause. The uncertain factor for the lender is the probability of depreciation of the property because of use.

Owens said the graduated mortgage-payment plan "hasn't met with a great deal of popularity in our industry." The objection is that it assumes that inflation will continue—and that is an assumption savings and loans prefer not to lean on, he said.

Wood also was skeptical about the mort-

gage-repayment plan that would allow low payments for the first 10 years. Many young people don't keep a home that long.

A lot of people would take advantage of it (the low pay start) and would be paying interest only, and that isn't the principle of mortgage lending, he said.

Also, the assumption that a young couple will better be able to meet mortgage commitments after the first 10 years may be a false one, Wood said.

There is the likelihood that both partners

in the marriage will be producing incomes at the start, but before the 10th year the wife will have traded her role as a secondary income producer to that of a full-time mother and housewife.

The California experiment with mortgage interests that rise and fall with the going market price interested area lenders.

Owens said he has just returned from a California seminar at which he found that the lending institutions there are offering variable-interest mortgages at a quarter per cent lower than the conventional fixed-rate packages. The duration of the plans was

Elderly people who live on fixed incomes are also provided for under the bill advocated by the savings and loan association. The provision is called the "reverse morttechnique.

Area lenders say that the plan sounds basically good, but that the arithmetic would have to be worked out.

Retired couples whose mortgages are paid up could use their real estate to set up an annuity with a savings and loan association.

Instead of making payments on their home, they would receive them.

The couple and the lending institution

would make a contract whereby the couple would receive monthly checks for a stipulated amount, and, in turn, they would sign a deed on their home to the lender.

Upon the death of the couple (or in rare

cases when the reverse mortgage is amortised), the home is sold. The lender recovers his investment plus interest, and the estate gets the remainder of the money.

"We would need a little study on that. It is a little foreign to what we have been ac-

customed to doing." Wood said.

ARGENTINA'S MILITARY JUNTA ARRESTS LEADING INDEPENDENT JOURNALIST

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. DRINAN. Mr. Speaker, in recent days Argentina's military government has undertaken an unprecedented campaign against the few remaining independent elements of the Argentine press. Last Friday, April 15, armed men dressed in civilian clothes seized Mr. Jacobo Timerman, the distinguished editor of La Opinion, Buenos Aires' most progressive independent daily newspaper. The intruders, who entered Mr. Timerman's home in the middle of the night, claimed that they were army officers.

For more than 24 hours, authorities of the Argentine Government remained silent as to Mr. Timerman's fate, keeping his family in the dark as to his whereabouts and well-being. Finally, the military junta confirmed that the individuals who abducted Mr. Timerman were indeed army officers and that the journalist was being held in official custody

on unspecified charges.

The behavior of the Argentine authorities in this matter confirms that the armed men who have been responsible for the wave of right-wing terror, including abductions and assassinations, are in reality agents of the government. The failure to charge Mr. Timerman with any specific offense is also typical. The government's action was unusual only in that the fact of Mr. Timerman's arrest was announced; the authorities generally do not confirm political arrests, adding to the anguish of the families of those arrested.

Mr. Timerman's prominence probably accounts for the confirmation of his detention. The military government has also confirmed the arrest of Enrique Jara, the general manager of La Opinion.

Other journalists have simply disappeared in the past several weeks. Edgardo Sajon, a member of La Opinion's board of directors, has been missing for 2 weeks. Another prominent journalist, a priest who worked for a Buenos Aires news agency, was found last week by the side of the road, his body riddled with bullets.

It is evident that the Argentine Government is cracking down viciously on the few remaining independent journalists. All those who respect the freedom of the press and the fundamental human rights of the individual must protest the arrest of Mr. Timerman and the other journalists. By their recent actions, Argentina's military leaders have demonstrated once again that they merit

condemnation by all civilized men and nations.

Some recent reports have suggested that Argentina's government is reducing its human rights violations. Events indicate, however, that the recently released Amnesty International report was correct in its conclusion that in many respects the situation is deteriorating. The Argentine courts remain firmly under the control of the military and refuse to honor habeas corpus petitions; the authorities continue to refuse to reveal the names of those who have been arrested for political reasons; Argentine citizens are becoming more critical of the junta; and the press has been attacked with unprecedented vigor.

I commend to the attention of my colleagues three recent accounts of events in Argentina: a description in the New York Times of April 15 of the arrest of Jacobo Timerman; an article in the April 14 edition of the Washington Post describing the inability of Argentines to ascertain the whereabouts of relatives who have been abducted by armed groups apparently acting under government authority; and an account of growing public dissatisfaction with the military regime from the April 15 edition of the Washington Post.

The articles follow:

[From the New York Times, Apr. 15, 1977]
ARGENTINE JOURNALISTS REPORTED UNDER
ARREST

BUENOS AIRES, April 15.—The editor and assistant editor of the liberal daily newspaper La Opinion were dragged from their homes by armed men early today and were later reported under arrest. Informed sources said that they may have been taken into custody in connection with a financial scandal.

The editor, Jacobo Timerman, and his assistant, Enrique Jara, were seized before dawn by men in civilian clothes who said they were army officers, Mr. Timerman's son Hector said. Authorities officially declined comment and there was no public announcement of the arrest.

The men were believed to have been picked up in connection with a Government investigation into the financial affairs of the Argentine banker David Graiver, who was reported killed last Aug. 7 in a plane crash near Acapulco, Mexico.

[From the Washington Post, Apr. 14, 1977]
COURT ASKED TO LOCATE 425 MISSING
ARGENTINES

(By Karen DeYoung)

Buenos Aires, April 13.—A group of eight local attorneys has petitioned Argentina's supreme court for information relating to the disappearance of 425 persons who they allege were forcibly abducted by "armed groups apparently acting under some official authority." None of the 425 has appeared on government lists of officially detained persons.

While Argentina's ruling military junta has consistently denied abducting and holding political prisoners without charge, Amnesty International put the number held at between 5,000 and 6,000 in a report following an investigatory mission that the organization made here last fall.

The petition is the second that has been made to the supreme court. A similar request, filed several weeks ago by the father of a man who disappeared last October, was rejected April 6, when the court stated it had no jurisdiction.

The lawyers ask for court orders requiring the ministries of Justice and Interior, as well as the federal police, to turn over all information in the files concerning the 425 persons. Habeas corpus petitions previously filed on their behalf have already been returned by those bodies stating that they were not, and had never been in custody.

It is likely that the Supreme Court will also reject this latest petition. Argentine courts, in the same manner as Argentine citizens, have been frustrated by government refusal to provide such information on the basis that it has taken no prisoners.

In private conversations, however, Government officials freely admit the holding of uncharged prisoners, some of whom, they say, may be only peripherally involved with subversive activities of leftist terrorists, if at all.

These prisoners are taken, a junta source said, because their names have in some way been associated with known guerrillas and they are wanted for questioning. While the government knows that cases against them would not stand up in court, either because there is no direct evidence or because judges fear reprisals from the terrorists, it is believed that their imprisonment is justified by what are interpreted to be conditions of war.

The junta system, which amounts to a "Catch-22" situation for the families of those abducted, was at least partially broken last week by former President Alejandro Lanusse. He made a personal appeal to Argentina's current president, Gen. Jorge Rafael Videla, a member of the three-man junta, to determine the whereabouts of Gen. Lanusse's former press secretary, Edgardo Sajon.

Sajon, who is a member of the board of directors of La Opinion, a leading Buenos Aires daily newspaper, disappeared two weeks ago.

Videla subsequently replied that the government had no information on Sajon's whereabouts. Since his disappearance, however, virtually every newspaper in the capital has speculated that the apparent abduction had something to do with the case of Argentine financier David Graiver, who is believed to have been killed in an airplane crash in Mexico last summer.

Among several other disappearances associated with the case is that of Gustavo Caraballo, attorney for Jose Gelbard, who served as economy minister in the previous government of Juan and Isabel Peron. The Argentine government has requested the extradition of Gelbard, who now lives in Washington, ostensibly to face charges of misuse of public funds. Earlier it lifted his citizenship.

The Graiver case is a maze of complications involving Argentine politicians, unions and, according to some sources, the Montonero guerrillas who are the main target of the government's anti-subversion campaign.

[From the Washington Post, Apr. 15, 1977]
FEWER ARGENTINES SHOW ENTHUSIASM FOR
MILITARY RULE

(By Karen De Young)

BUENOS AIRES,—When the weather is particularly nice in Buenos Aires, they say it is "Peronist weather." Whenever the late president would appear in public, the legend goes, storm clouds would magically vanish in a blaze of sunshine.

Even those who are convinced that Juan Domingo Peron came close to ruining Argentina—and they are many—say it is true. Call it charisma, machismo or simple demagoguery, for nearly 20 years, both in office and in exile, Peron had the power to move the people.

It is precisely this power that Argentina's current government—a military junta composed of the heads of the army, navy and air

force, with army commander Gen. Jorge Rafael Videla as president—does not have. One of the most serious domestic problems now facing the junta is the fact that most Argentines find it, to say the least, un-

inspiring.

"The biggest problem this government has," said one official within the now emasculated labor movement that once formed the Peronist backbone, "is that there is no enthusiasm for it." Out of fear, "nobody is going to criticize it too strongly. But nobody is going to say anything good about it, either."

It is perhaps axiomatic that military governments are not loved. This particular junta, however, which a year ago ousted Peron's widow, Isabel, at a time when most Argentines agreed that the country was on the road to ruin, started out with a fair amount of good will.

That support has now faded into a sort of dull acceptance of the government's strongarm power to impose its wishes, and an overriding feeling among labor, academicians and politicians that the country has no real direction. "It's true," one high navy official shrugged, "we have no plan, no big program."

What makes Argentina's military government different from that in Chile and other countries where military rule is more obviously institutionalized, is its refusal to be branded as other than a "transition" government. It is determined to maintain a facade of freedom inside a system of both subtle and blatant repression.

It is conventional wisdom here, however, that the government is divided, not only within the junta itself, but into a maze of subgroups that formulate and carry out their own orders. These groups are vaguely labelled "hard-liners," "moderates," a category into which Videla is usually placed, and the "soft-liners."

The only thing that has united them recently, and even managed to unite a good portion of the populace, was anger at President Carter's cutoff of military credits because of alleged human-rights violations.

The benefits of having many factions are that unpopular actions can be passed off as the work of extremists

The Montoneros and the People's Revolutionary Army, or other groups of leftist guerrillas who are generally credited with acts of terrorism, have by nearly all reckonings been completely annihilated. The nightly, seemingly random, bombing attacks in Buenos Aires in recent weeks are considered the crazed actions of cornered desperados.

But the retaliatory paramilitary kidnapings, secret detentions, tortures and deaths that have become a personal terror and an international humiliation to many Argentines continue unabated. Amnesty International says there are at least 5,000 uncharged political prisoners here. Others put the figure as high as 20,000.

Gen. Albano Harguindeguy, the interior minister, who is considered a "hard-liner," has said at various times that there are no more prisoners than half the number of fingers on one hand, that there have never been any prisoners, and that there may have been some but are no more now. Videla says there are no political prisoners, only detained "subversive delinquents."

During recent weeks, a number of prominent civilians have disappeared—kidnapings that, since Videla says his people have no knowledge of them, are believed to be the work of "hard-liners" displeased with "mod-

erate" concessions.

Earlier this month Edgardo Sajon, a director of La Opinion, a leading Buenos Aires daily and press secretary under former President Alejandro Lanusse, disappeared on his way to work. After a personal appeal to Vi-

dela, Lanusse said the president assured him that neither federal nor provincial police had any clue to Sajon's whereabouts.

A few days later the bullet-ridden body of Hector Ferreiros, a prominent local journalist who had been abducted from his home by uniformed men, was found by the side of a suburban road.

"You can't call it anarchy," said one socialist politician. "It's not even a dictatorship. It's more like a bunch of little dictatorships."

In mid-March, according to diplomatic sources, a group of American travel agents on a government-sponsored tour were stopped by soldiers as their bus left Buenos Aires' international airport. Made to stand spread-eagled against the bus, they were frisked, their luggage was inspected and they were forced to stand on the side of the road while an officer gave them a 30-minute lecture on the fallacy of President Carter's human rights policy.

Junta spokesmen acknowledged that incidents may have occurred, but said they had no knowledge of them.

"This is how they convince the world that Argentina is a safe place where human rights are respected," said one Western diplomat grimly. "Not only does the left hand not know what the right is doing, the left forefinger usually hasn't a clue what the left thumb has in mind."

One thing all factions initially agreed upon was giving a year-long free hand to Economy Minister Jose Alfredo Martinez de Hoz. The results of his free-market policies have been, in many respects, impressive. The only civilian member of the Cabinet, he managed to borrow \$1.2 billion, and to pay off \$800 million in debts. He also bolstered the national treasury, estimated by one junta spokesman to have reached a rockbottom \$10 million at the time of the coup.

For the man on the street, however, the policy has not been so successful. Wage increases averaging around 20 per cent were not nearly enough to offset inflation that, while greatly decreased from nearly 800 per cent in 1975, is still at the triple-digit level.

As one local news magazine headlined last week: "Who's responsible for inflation now?"

At times, it seems the economy minister himself does not know. Last month, he announced a 120-day freeze on prices including gasoline. A week later, gasoline prices doubled and a week after that, taxi fares doubled.

Part of the problem, as nearly everyone freely admits, regardless of political persuasion, is that Argentines are selfish people.

"Things are not the same here as in places like Peru or Bolivia," said a leader of the Radical Party that, in freer political times, was the loyal opposition. In largely middle-class Argentina, he said, "the problem is not getting enough to eat, it is getting a new car next year," an infinitely more volatile issue.

The political parties and the labor unions, meanwhile, seek an opening for political dialogue with the junta. At present, parties are officially "suspended" and unions, permitted only on a local level, are run by the military.

It had been widely hoped that Videla's March 31 speech, on the anniversary of the coup would describe such an opening. "Everybody," the Radical leader said, "is waiting to see what happens."

What happened was a call for "national unity" that left the political future, in the words of the political commentator "as muddy as ever."

While calling the junta "the best government available" to Argentina under current circumstances a columnist for the English-language Buenos Aires Herald noted dryly that the situation was, all in all, "distressing."

It is likely to get worse before the sun comes out.

CONGRESSMAN GEORGE BROWN OF CALIFORNIA SPEAKS ON AUTO-MOTIVE PROPULSION RESEARCH

HON. MIKE McCORMACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. McCORMACK. Mr. Speaker, this morning the Fourth International Symposium on Automotive Propulsion Systems, which is sponsored by the Energy Research and Development Administration under the auspices of the NATO Committee on the Challenges to Modern Society, began 4 days of meetings. The keynote speaker at this meeting was our colleague, George Brown, who has taken an extremely active interest in the future of the automobile. As you know, Mr. Brown of California is also the lead author of the Automotive Transport Research and Development Act of which I am pleased to be the lead coauthor. This bill, H.R. 784, is one of the key energy conservation bills of the last Congress that remains unenacted. This situation should be corrected in the near future.

Due to the importance of the automobile in any energy program, the symposium now being held is especially timely and relevant to President Carter's energy message. The same can be said for the keynote address given by Mr. Brown of California. For this reason, I insert it in the Record at this time.

The address follows:

KEYNOTE ADDRESS—FOURTH INTERNATIONAL SYMPOSIUM ON AUTOMOTIVE PROPULSION SYSTEMS

Mr. Chairman, distinguished delegates and observers of this symposium, it is indeed an honor for me to address you. My own credentials are fairly humble, but there are few issues facing modern industrialized society that I have a greater interest in than the future of the automobile. And there are few issues facing modern industrialized societies that are as difficult to understand as the issue of how we can maintain high production levels of automobiles, with adequate fuel supply for those automobiles, while, at the same time protecting the economy of those societies or nations. It is not at all certain that the United States, Europe and Japan can continue producing automobiles at the rate they have in the past, nor is it certain where the fuel will come from. It is certain that the automobiles of the future will be different from those of the recent past, and will need to be not only more efficient, but will also need to use a nonpetroleum based fuel.

Many technological solutions to these problems have been suggested. I have no doubt that our highly competent scientists and engineers will be able to achieve the goals of fuel economy and an adequate supply of alternative fuels, as we have technologically solved the problem of reducing automobile exhaust emissions. The tougher problems are not technological, but are institutional, environmental, social, economic and legal. This symposium is focused on the technological issues, but the participants are all quite aware of these other forces which shape the technologies which must be de-veloped. It is my hope, in these brief remarks, to encourage you in your efforts to develop technological solutions, and share with you my thoughts about the future of the automobile, and the propulsion system it uses.

I am sure the majority of the participants here know that the three earlier International Symposiums on Automotive Propulsion Systems were actually focused on con-trolling the emissions of harmful automobile pollutants. Those meetings were organized in response to a United States law, the Clean Air Act Amendments of 1970, which called for very severe reductions in the automobile emissions for hydrocarbons, carbon monoxide and nitrogen oxides.

As I am sure will be documented during this symposium, the technology to meet those standards is now available, and will probably be installed on autos sold in the U.S. in the next few model years, depending on how lenient the U.S. Congress is with revising the existing standards. What may not be as well known is that when the U.S. Congress passed the Clean Air Act Amendments in 1970, it expected to see new automotive propulsion systems developed, rather than just see improvements and add-ons to the Otto cycle internal combustion engine. The current emphasis upon fuel economy provides us with another opportunity to develop alternatives to the ICE and its dependence on oil-based fuels.

The fact that most of the world's automobiles are dependent upon oil, and use the Otto cycle ICE, may be one of the more interesting subjects to consider. Why is this propulsion system so dominant in the world

A primary reason has been the availability of relatively cheap gasoline. Another very large reason is the enormous inertia which exists in capital intensive industries, such as the automobile industry, which is comfortable sticking with a proven, profitable product. While this generalization is especially true for the U.S., it appears to be true for Europe and Japan as well. What has changed is the increasing demands of society upon industry to produce products that are more socially acceptable.

Thus, we have safety requirements and environmental controls. Where the cost of fuel is high, as it is in Europe and Japan, a further requirement for fuel economy is de-manded. The United States has only recently recognized this fact, and this week President Carter is expected to make some recommendations which are, by American standards, draconian in nature to encourage the conservation of petroleum used in motor ve-

These recommendations are expected to include proposals for a phased-in gasoline tax increase ranging from 5 cents to 50 cents per gallon, plus tax increases on less efficient automobiles. These, or similar proposals, will undoubtedly be coupled with proposals for other types of energy consumption taxes, to-gether with steps leading to further de-regulation of energy prices, long maintained at sub-market levels. All of these proposals can only be considered as a modest beginning toward energy conservation, at least by non-U.S. standards, yet it will cause shock waves in U.S. society. It is to be hoped that politi-cal leaders of both parties in the Congress join in emphasizing to the American public the necessity of such steps.

With the imposition of the type of measures President Carter is recommending, U.S. and non-U.S. auto manufacturers will be facing similar constraints. The potential savings from developing a better automotive propulsion system in the U.S. alone is simply tremendous, since we now use more than nine million barrels of oil a day for transportation. Advanced automotive propulsion systems currently being developed could save more than half of this. Far more savings could occur if a conscious attempt were made to shift away from petroleum based fuels and

adopt other energy conservation measures.

The economic, environmental and energy constraints facing auto manufacturers need

not mean disaster. There is no reason why the future of the automobile in society should be in doubt. It is far more likely that the automobile will adapt to future condi-tions, provided it continues to benefit society as a whole. But other technologies have gone the way of the dinosaur, and the privately owned automobile could follow in its tracks

The flexibility and ingenuity of Japanese and European auto manufacturers in meeting the auto emission controls of the United tes have long been a source of admiration in this country. While these manufacturers were advancing the technology, the U.S. companies were concentrating on changing the law to avoid the standards. This same type of delaying action is likely to occur on fuel economy standards and attempts to encourage alternative fuels and electric vehicles, but any such delay would only be transitory and have little long-term effect, because there are very few choices left to modern societies. In the case of automobiles, this symposium covers the main technological options left to automobile manufacturers

Specifically, future automobiles will need to be much more fuel efficient than they are today. By the end of the century, they will also need to find a substitute for oil as the fuel base. The alternatives are fairly limited. Smaller vehicles with improved internal combustion engines can be developed to the technological limit. External combustion en-gines, with a higher theoretical efficiency can be developed, with a special emphasis upon alternative fuels. Finally, electric and hybrid vehicles can be developed, which would eliminate the need for liquid fuels for automobiles. Whether these alternatives can be developed in time to meet all the needs of society, without disrupting society, the economy, the environment, and energy policies, is a question this symposium may wish to adss. Finally, what role industry will play and what role government will play is a question industry and government must resolve themselves.

Each nation has a different relationship with the industries within its borders. In the United States, that relationship has been changing, as have the policies of the U.S. toward energy, imports, human rights and the like. The consequences of oil imports and auto sales are too vital to a nation's economy to allow its automobile industry to fail simply because it failed to adjust to the demands of the future. Governments must guarantee the security of their own economy by guaranteeing that future personal mobility, employment, and energy will all be available. This is not the role of the automobile industry, even though it is its concern, which means that decisions about future automotive propulsion systems must be joint industry-government decisions. This realization has been a long time in coming in the United States, but all the evidence shows that this fact is finally accepted by both the Congress and the Administration, if not yet accepted by industry. With the election of President Carter, the Congress and the President will hopefully be speaking with the same voice on issues relating to the government's role in complex technological, social, environmental and economic issues such as the future of the automobile.

Even though this cooperative arrangement is new, there are already new programs that the U.S. will be undertaking, all of which I am sure will be covered over the next several days. Late last year the Congress passed, over the former President's veto, the Electric Vehicle Research, Development and Demonstration Act of 1976, which established a 6year, \$160 million program in the Energy Research and Development Administration to demonstrate the commercial feasibility of advanced electric and hybrid vehicles-

Another new program, which was almost passed over the President's veto, and will pass the Congress this year, is the Automotive Transport Research and Development Act. This Act, which is essentially a companion program to the electric vehicles program, will establish a five year program to develop advanced automotive propulsion systems that are non-polluting, fuel efficient and could use alternative fuels. I should add that even without this new program enacted into law, the Energy Research and Development Administration has begun a very good program to accomplish just these goals, as well as develop alternative fuels such as methanol, ethanol, synthetic oil from coal, and hydrogen fuels. These programs are, by their very description, long-range and will have little impact upon the next few years of automobile production. What we, in the United States, do over the next five years is largely a political and an economic question. During this time, we can probably learn much more from Japan and Europe than they can learn from us. After this time, I very much hope that the U.S. will be able to help the auto manufacturers of the world meet our common constraints by demonstrating new, extremely energy-efficient, low polluting automotive propulsion systems.

Needless to say, major changes in automotive technology will, by themselves and as a part of broader programs of energy conservation, have major impacts on other aspects of industrial societies. New energy industries will develop as petroleum refining declines in importance. New patterns of materials processing and fabrication will develop. Urban settlements will undergo major changes, with particular eraphasis on better integration of various human activities, including transportation modes and networks, to reduce energy demand. While the responsibility for these and other changes will not rest, solely on those concerned with automotive technology, a prudent attention to the comprehensive sessment of the impact of major new technologies, and some attention to major social policy issues, will help us all to move through this period of drastic change with minimum

damage to our societies. It has been a pleasure being able to keynote this symposium. You are truly dealing with one of the Challenges of Modern Society, and one of the more complex issues facing society. It remains to be seen if the institutional, social, economic and legal constraints will accommodate radical technological solutions. We can only hope that with the availability of a substitute technology, the inertia against using it can be overcome. In the meantime, we must work for the incremental changes which we know we can achieve.

EDUCATION. WORK, AND RETIRE-MENT CONFERENCE TO BE HELD

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. MIKVA. Mr. Speaker, I would like to call to the attention of my colleagues a conference on education, work and retirement that promises to be exceptionally provocative and enlightening. The conference, which begins at the Hyatt Regency Hotel in Washington, D.C., on the night of April 20, is being presented by Holt, Rinehart and Winston/CBS, Inc., and the Center for Policy Process, in cooperation with the National Center for Productivity and the Quality of

Working Life, the United Auto Workers, National Manpower Institute, American Association of Retired Persons, National Institute of Education, American Management Associations, and the National Commission on Resources for Youth.

A prime purpose of the conference, as set forth by conference planners, is "to examine and challenge some basic assumptions about the way American society organizes education, work and retirement as sequential, isolated retirement isolated activities."

Conference panelists include a wide range of people-scholars, journalists, social activists and public officials. On Thursday, April 21, the second day of the conference, our distinguished colleague, Congressman John Brademas, will participate, as will the distinguished Senator from California, ALAN CRANSTON.

Mr. Speaker, at this time I would like to take a moment to identify the other conference participants. Beginning at 8 p.m. on April 20, there will be a prepared presentation by author Ivan Illich who will then spend most of the evening answering questions from conference participants. On Thursday, April 21, there will be a keynote address at 9 a.m. by Juanita Kreps, U.S. Secretary of Commerce. That will be followed by a plenary panel, Breaking Out of the Three Boxes of Life: Barriers to the development of new strategies for education work and retirement. Panelists include:

Alex Haley, author of "Roots."

Robert C. Holland, president, Committee

for Economic Development.

Senator Alan Cranston (D. Calif.)

Orville G. Brim, Jr., president, Foundation

for Child Development. Nancy Tapper, president, Peralta Com-

munity College for Non-Traditional Studies,

Alex Comfort, editor, "Experimental Ger-ontology"; professor, University of California Medical School, Irvine; editor, "The Joy of Sex."

The remainder of Thursday's program will include a luncheon speech by F. Ray Marshall, U.S. Secretary of Labor, followed by concurrent sessions on alternative strategies with these participants:

New Economic Strategies, Gar Alperovitz, co-director, Exploratory Project for Economic Alternatives

The Workplace as the Center for Economic Development and Cultural Integration; Michael Maccoby, author of "The Gamesman."

Broadening the Worker's Stake in the System; Louis O. Kelso, originator of the techniques behind all the Employee Stock Ownership Plans.
A Workers'

Strategy; Harley Shaiken, machinist; Pete Camarata, dockman; Alfred Ferdnance, car-hauler.

The Three Boxes of Life and How to Get Out of Them; Richard N. Bolles, director of the National Career Development Project; Author of "What Color is your Parachute?

Thursday evening, there will be concurrent panels on setting priorities. Panel A will include:

Studs Terkel, author of "Working"

Ernest G. Green, Assistant U.S. Secretary of Labor for Employment and Training.

Maggie Kuhn, National Convenor, Gray Panthers.

Carl H. Madden, professor, American University; former chief economist, U.S. Chamber of Commerce.

Nicholas von Hoffman, syndicated col-

James P. Gibbons, president, International Group Plans Inc.

Willard Wirtz, chairman, National Manpower institute; former U.S. Secretary of

Panel B will consist of the following:

Congressman John Brademas (D. Ind.), Chairman, House Select Subcommittee on Education, and House Majority Whip. Allen Ginsberg, poet.

John L. McKnight, professor of Urban ffairs, Northwestern University.

Caroline Bird, author of "Born Female," "The Case Against College," and "Everything a Woman Needs to Know to Get Paid What She's Worth."

T. George Harris, dropout; First Editor-in-Chief of "Psychology Today."

Harriet Miller, executive director, American Association of Retired Persons.

George J. W. Goodman ("Adam Smith"), editorial board, New York Times; author of "The Money Game," and "Powers of the Mind."

The conference will conclude on Friday with a plenary session at 9 a.m., featuring John H. Filer, chairman of Aetna Life & Casualty, followed by a plenary panel on policy options with these participants:

Robert M. Ball, author, "Social Security Today and Tomorrow," former Commissioner. Social Security Administration.

James L. Hayes, president, American Management Associations.

Elsa A. Porter, Assistant U.S. Secretary of Commerce.

Sam Brown, Director of ACTION, the fed-

sam Brown, Director of ACTION, the federal agency for volunteer services.

Stewart Brand, editor, "CoEvolution Quarterly"; creator of "The Whole Earth Catalogue."

William W. Winpisinger, president-Elect, International Association of Machinists and

Aerospace Workers.

Ernest L. Boyer.

A luncheon on Friday will wind up what promises to be a most enlightening conference on critical issues facing our country.

LEADERS COULD AID RECRUITING EFFORT

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 19, 1977

Mr. STEIGER. Mr. Speaker, a lot of criticism has been heard recently about the all volunteer military. Much of the criticism has come from political leaders.

Constructive suggestions can help the services improve their management capabilities. However, too little attention has been given to the positive facts about today's military. The positives far outweigh the negatives, but it is unfortuately the latter which get attention.

Andy Plattner, congressional correspondent for the Army Times, has given political leaders food for thought in his well-stated April 18 article, "Leaders Could Aid Recruiting Effort." As he notes, "The services belong to the Nation. They're not an illegitimate child to bring out of the closet only in periods of dire need."

Plattner points out that the country's lawmakers are seldom heard encouraging young people to join the military. He suggests that it's time Members of Congress and the President take a more active interest in military people.

"So, before the President and Congress consider going back to the draft, maybe they might try going to a few military bases and seeing what today's military is all about," Plattner advises. "At least they then could present a realistic picture to the young people in their communities. Let national leaders serve as recruiters for a while."

I hope we will all heed his words and do our part to encourage service on behalf of the Nation. His article follows:

LEADERS COULD AID RECRUITING EFFORT

(By Andy Plattner)

More people in Congress and the governtalking-some seriouslybringing back the draft.

The reason, they say, is that the all-volunteer force concept has falled or is falling. Reserve Component manpower levels are said to be dangerously low without much hope of getting better soon. Recent recruiting statistics are worrisome and there will be fewer eligible males to recruit in the future. The civilian job market is expected to get better, thus lowering the attractiveness of the milmilitary.

Other people are uneasy because they say the military has too high a proportion of blacks and not enough people from wealthy families. Some critics say the AVF is the cause for military manpower costs being so large a portion of the defense budget.

Wait a minute. That the AVF has succeeded to the extent it has is the result of the military effort. The services had to recruit people at a time when the bad taste of the Vietnam War was in everybody's mouth. They didn't have a lot of help. It's time the services received that help.

If the President and the 535 members of Congress are seriously worried about military manpower shortages, they could try some-thing that wouldn't cost a cent and could be as valuable as millions of dollars spent on recruiting.

With few exceptions, notably on the Armed Services Committees, the only time elected officials have any praise for the miltary is when the military does something for them in their districts. An expanded military base or Corps of Engineers project in their district nets lavish praise for the Pentagon. Close a base or cancel a project and the wrath of God is unleashed.

What is seldom heard from the country's lawmakers is encouragement for young people to join the military. Whatever happened to the idea that there is a patriotic duty to serve one's country?

Congressmen seem, for the most part, to be of the opinion that that's not a popular idea now with the voters. Consequently, they don't say much about it. But lawmakers can promote the military if they want to.

There is considerably more impact if President Carter says that young people should join the military than a Madison Avenue commercial selling all the great jobs in the military.

The services belong to the nation. They're not an illegitimate child to bring out of the closet only in periods of dire need. It wasn't the military that was responsible for the agony of Vietnam but rather the elected leaders. It wasn't the major or sergeant who said let's go 12,000 miles to help South Viet-

I spent several days at sea aboard the USS Forestal last summer shortly after that aircraft carrier served as President Ford's reviewing stand for the Bicentennial parade of tall ships in New York Harbor, It seemed as though every member of the crew, and especially the single members, couldn't say enough about how well they were treated in New York while in uniform for the celebration.

"People bought us dinners, drinks and even offered us a place to stay in their homes," a sailor said. "They were glad we were there."

I remember my father wearing his Air Force uniform to testify for one of his men at a civilian trial. He explained that he was wearing it because the uniform had a certain amount of respect in the community.

Well, maybe it's time that we brought that idea back. I'm not suggesting that military people wear only their uniforms when they go off base. But it might be nice if the civilian community discarded the idea that military people have some disease.

One way for this to happen is for the country's leaders to set an example. It's time members of Congress and the President took a more active interest in military peoplenot just planes or bases or aircraft carriers.

Although there are many good things in military life, it is not an easy life for many. The hours are sometimes long, the freedom of choice is limited and the potential risk for some is high. Without financial support from the country, it's that much harder.

So, before the President and Congress consider going back to the draft, maybe they might try going to a few military bases and seeing what today's military is all about. At least they then could present a realistic picture to the young people in their communities

Let national leaders serve as recruiters for awhile.

ANTINUCLEAR POWER DEMON-STRATORS PLAN LAW VIOLATIONS

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 19, 1977

Mr. McDONALD. Mr. Speaker, on April 30, 1977, radical demonstrators opposed to the use of nuclear energy to generate electricity intend to occupy the construction site of a nuclear powerplant in Seabrook, N.H. The organizers of the demonstration hope that 5,000 persons will participate in a preliminary rally and that about 1,800 of them will participate in the takeover of the plantsite.

The Seabrook demonstration is being organized by the Clamshell Alliance, 62 Congress Street, Portsmouth, N.H. 03801 (603–436–5414) and P.O. Box 162, Seabrook, N.H. (603–964–6514).

The Clamshell Alliance was formed in July 1976, and is a coalition of some 15 antinuclear power and ecology groups such as Concerned Citizens of Seabrook, the Alternative Energy Coalition of the North Shore, the Seacoast Anti-Pollution League, Brattleboro Political Action, the Granite State Alliance, the Portsmouth People's Energy Commission, and Nuclear Objectors for a Pure Environment—NOPE—of Montague, Mass.

Leadership roles in the Clamshell Alliance have been taken by Guy Chichester, formerly an organizer with the Seacoast Anti-Pollution League; the Alternative Energy Coalition—AEC—of 31 Federal Street, Greenfield, N.H. (603–777–5580); and by Samuel Holden Lovejoy of NOPE.

Since 1974, Sam Lovejoy has been the

foremost advocate of sabotage to prevent construction or operation of nuclear fueled electrical powerplants.

On February 22, 1974, Sam Lovejoy put his principals of support for sabotage into practice when he caused the collapse of a \$50,000 preliminary weather monitoring tower at the Montague nuclear powersite. Lovejoy then surrendered himself to police and in a prepared statement to the press admitted "full responsibility for sabotaging that outrageous symbol of a future nuclear powerplant."

After a week-long trial in which Lovejoy defended himself as having acted "in the public interest," and in which he was supported by a number of anti-Vietnam activists serving as character witnesses, the judge directed acquittal on grounds of a faulty indictment which charged Lovejoy with destruction of personal, rather than real, property. Lovejoy then triumphantly told the press, "The publicity * * * was a great victory, and we've entered the issue of civil disobedience into the environmental movement."

Last summer the Clamshell Alliance organized a series of rallies and demonstrations which culminated in an August 22, 1976, demonstration in which over 1,000 people participated. From this rally, 180 demonstrators invaded the Seabrook plantsite and staged a sit-in. The "civil disobedience" cadre were arrested on trespass charges and were subsequently convicted in district court. Most of them have appealed to the New Hampshire Superior Court. Five who did not appeal were sentenced to 40 days' hard labor for their trespass.

Since 1974, Sam Lovejoy has worked to popularize the concept of destruction of utility company private property as "nonviolent direct action." Lovejoy worked to forge alliances with activist groups such as the War Resisters League--WRL; Women Strike Peace-WSP, a group thoroughly penetrated by the Communist Party, U.S.A., and which is seeking to combine its campaign for U.S. disarmament with opposition to the use of nuclear technology for peaceful purposes; and Ralph Nader's Critical Mass organization. Lovejoy had attended Nader's Critical Mass conference and expounded the need for sabotage to the cheers of the assembled activists. And in an article published in mid-1976 in Grass Roots, the newspaper of the People's Party, a socialist group headed by Dr. Benjamin Spock, Lovejoy described how he suggested sabotaging the electrical transmission lines of a nuclear powerplant to the Project Survival group in San Luis Obispo, Calif.

Now Ralph Nader has become involved in supporting the concept of destruction of property as "civil disobedience." The Village Voice of April 4, 1977, published an interview with "public citizen" Nader in which he was quoted as follows:

"What activists are trying to do is make new law based on the settled Anglo Saxon tradition of self-defense that stretches back through Blackburn's commentaries," Nader replied. "That is, if someone tries to break into your house you can retaliate lawfully. In the case of a nuclear reactor, the self-defense is projective. But what are you going to do, wait until radioactivity is all over the place? Shouldn't you destroy property before it destroys you? Here you are violating

a minor law to get judgment on a more important one, the way they did in the civil-rights movement when they sat at those lunch counters."

"You know," he said, gesturing sharply out the window of his office, "if it hadn't been for those demonstrators, the war would still be going on. The government was afraid of civil war. I'll make a prediction: If they don't close these reactors down, we'll have civil war within five years * * *."

What Nader is doing is perverting our legal traditions which say that force may be used in self-defense against an immediate threat to your life. Our tradition does not say you can go out and kill your neighbor on the grounds that there is a statistical one-in-a-million chance that someday he might go crazy and kill you. The probability that all the multiple safeguards built into nuclear reactors would all fail and that significant amounts of radioactivity would be released is infinitesimally small. Yet on that miniscule probability, the antinuclear technology activists are trying to justify sabotage and mayhem.

The Clamshell Alliance organizers are attempting to develop the core around which to build the sort of mass demonstrations and continuous occupations of nuclear powerplant sites that have occurred in West Germany and Italy. The Clamshell Alliance, through its supporters in the War Resisters League and the American Friends Service Committee, has reportedly established so-called fraternal relations with the West German leaders of the Wyhl demonstrations.

Although the Clamshell Alliance is in touch with legally-oriented antinuclear power groups such as the New England Coalition on Nuclear Pollution—NECNP—and would accept some sorts of aid from them, the Clamshell Alliance is fully committed to achieving its goals through direct action in violation of the law rather than through court battles which the NECNP fought for 7 years.

The extreme anticapitalist, antitechnology perspective of the Clamshell Alliance and its bizarre distorted arguments are clearly set out in its "Declaration of Nuclear Resistance" which follows in full:

DECLARATION OF NUCLEAR RESISTANCE

We the people demand an immediate and permanent halt to the construction and export of nuclear power plants.

Nuclear power is dangerous to all living creatures and their natural environment. It is designed to concentrate energy, resources and profits in the hands of a powerful few. It threatens to undermine the principles of human liberation on which this nation was founded.

A nuclear power plant at Seabrook, New Hampshire—or elsewhere in New England—would lock our region on this suicidal path. As an affiliation of a wide range of groups and individuals, the Clamshell Alliance is unalterably opposed to the construction of this and all other nuclear plants. We recognize that:

1. The present direction in energy research and development is based on corporate efforts to recoup past investments, rather than on meeting the real energy needs of the people of America.

2. There is a malignant relationship between nuclear power plants and nuclear weapons. The arms industry has used the power plants as a shield to legitimize their technology, and the reactor industry has

CXXIII-712-Part 9

spawned nuclear bombs to nations all over the world, as well as, potentially, to terrorist groups and even organized crime.

3. Nuclear plants have proven to be an economic catastrophe. They are wasteful and unreliable, and by their centralized nature tend to take control of power away from local communities

4. The much-advertised "need" for nuclear energy is based on faulty and inflated projec tions of consumption derived from a profit system that is hostile to conservation. The United States is 6 percent of the world's population consuming 30 percent of its energy resources. With minimal advances in conservation, architecture and recycling procedures, the alleged "need" for nuclear energy disappears.

5. The material and potential destructiveness of nuclear power plants is utterly horrifying. It ranges from cancer-causing lowlevel radiation to the possibility of major meltdown catastrophes to the creation of deadly plutonium which must be stored for 250,000 years, to destruction of our lakes, streams and oceans with hot water. murderous contingencies have already filled many volumes, and they cannot be countenanced by a sane society. No material gain—real or imagined—is worth the assault on life itself that atomic energy represents.

We therefore demand:

1. That not one more cent be spent on nuclear power reactors except to dispose of those wastes already created and to decommission those plants now operating.

2. That American energy resources be focused entirely on developing solar, wind, tidal, geothermal, wood and other forms of clean energy in concert with the perfection of an efficient system of recycling and conservation.

3. That any jobs lost through cancellation of nuclear construction be immediately compensated for in the natural energy field. Natural energy technology is labor-intensive (as opposed to nuclear, which is capital-intensive) and will create more jobs-permanent and safe-than the atomic industry could ever promise. Any dislocation caused by the shift from nuclear to natural energy must be absorbed by capital, not labor.

4. That a supply of energy is a natural right and should in all cases be controlled by the people. Private monopoly must give

way to public control.

That in concert with public ownership, power supply should be decentralized, so that environmental damage is further minimized, and so that control can revert to the local community and the individual.

We have full confidence that when the true dangers and expense of nuclear power are made known to the American people, this nation will reject out of hand this tragic experiment in nuclear suicide, which has already cost us so much in health, environment quality, and material resource

The Clamshell Alliance will continue in its uncompromising opposition to any and all nuclear construction in New England.

Our stand is in defense of the health, safety and general well-being of ourselves and of future generations of all living things on

We therefore announce that should nuclear construction still be in progress at Seabrook, New Hampshire on May Day Weekend, 1977. we will mobilize the citizenry and march onto that site and occupy it until construc-tion has ceased and the project is totally and

irrevocably cancelled.

The Clamshell Alliance activists are serious about developing a cadre to resist removal from any sitin or occupation of the Seabrook powerplant site. As it did for last August's demonstration, the American Friends Service Committee is

providing training in "nonviolent civil disobedience" lawbreaking tactics. The training tactics for the April 30 demonstration parallel those for last year of which one participant reported:

Every participant in the occupation had to identify her/himself before hand, undergo a training session in nonviolence and join an affinity group [based on one's place of residence], that would stay together during the entire demonstration * * *. The affinity groups created a mechanism for democratic decision making during the action. Thus, each affinity group had its own designated spokesperson (or "spoke") as the connecting links of a wheel. The spoke would represent her/his affinity group in a centralized deci-sion making body. S/he would also carry information back and forth between the affinity group and the coordinating body, so that the decisions of the latter would be based on the input of the collective affinity groups.

The advantages of this type of organization at a demonstration were outlined in the following terms:

* * * A large number was not the Clamshell's first priority. Instead of a mass demonstration distinguishable only by its size, they wanted a tightly knit group that would they wanted a tightly knit group that would gain the experience of collective action, maintain a nonviolent discipline, guard against police agents, and then remain to-gether as an organizing group * * * [for] gether as an organizing group * * * [for] when the hard work of building support for the next occupation would begin.

However, the Alliance organizers are making allowance for the usual demonstration chaos by permitting last minute affinity group formation and tactical training on the morning of the demonstration. They hope to be able to overwhelm the ability of local law enforcement officers to cope with large numbers of disciplined demonstrators. And there have been indications that some antinuclear power activists may engage in violent "support potentially work" against the power company in preceding

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee-of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the Congressional

Any changes in committee scheduling will be indicated by placement of an as-terisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Wednesday, April 20, 1977, may be found in the Daily Digest section of today's RECORD.

The schedule follows:

MEETING SCHEDULED APRIL 21

8.00 a.m.

Agriculture, Nutrition, and Forestry
To continue markup of E. 275 to amend

and extend through 1982, the Agriculture and Consumer Protection Act of 1973.

322 Russell Building

9:00 a.m.

Energy and Natural Resources

Subcommittee on Park sand Recreation To hold hearings on S. 658, to designate certain lands in Oregon for inclusion in the National Wilderness Preservation System.

3110 Dirksen Building

Foreign Relations

International Operations Subcommittee

To hold hearings on proposed fiscal year 1978 authorizations for the Department of State.

4221 Dirksen Building

Governmental Affairs

To hold hearings on the nomination of Jay Solomon, of Tennessee, to be Administrator of General Services

3302 Dirksen Building

9:30 a.m.

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior and related agencies, to hear public witness

1114 Dirksen Building

Banking, Housing, and Urban Affairs

To hold hearings on the nominations of William F. McQuillen, of Virginia, and Harry R. VanCleve, of Virginia, to be members of the Renegotiation Board. 5302 Dirksen Building

Human Resources

To consider S. 725, authorizing funds through fiscal year 1982 for certain education programs for handicapped

Until 10:30 a.m. 4232 Dirksen Building

10:00 a.m.

Appropriations

Foreign Operations Subcommittee

To resume hearings on proposed budget estimates for fiscal year 1978 for foreign aid programs.

S-126, Capitol

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To hold hearings on proposed budget estimates for fiscal year 1978 for the Arms Control and Disarmament Agency, Board for International Broadcasting, USIA, and the Commission on Civil Rights.

S-146, Capitol

Banking, Housing, and Urban Affairs

'To continue hearings on proposed housing and community development legislation with a view to reporting its final recommendations thereon to the Budget Committee by May 15. 5302 Dirksen Building

Commerce, Science, and Transportation To hold hearings on the nominations of Langhorne McCook Bond, of Illinois, to be Administrator, and Quentin Saint Clair Taylor, of Maine, to be Deputy Administrator, both of the Federal Aviation Administration. 235 Russell Building

Commerce, Science, and Transportation

Consumer Subcommittee

To continue oversight hearings on activities of the Consumer Product Safety Commission.

5110 Dirksen Building

Environment and Public Works

Subcommittee on Resource Protection To hold hearings on proposed legislation authorizing funds to the States to extend the Endangered Species Act through 1980.

4200 Dirksen Building

Governmental Affairs

Subcommittee on Government Efficiency To receive testimony on a GAO study alleging inaccurate financial records of the Federal flood insurance program. 6226 Dirksen Building

Governmental Affairs Subcommittee on Reports, Accounting,

and Management To continue hearings to review the procsses by which accounting and auditing practices and procedures, promulgated or approved by the Federal Gov-ernment, are established.

3302 Dirksen Building

Joint Economic Committee

To hold hearings to receive testimony on issues the United States will present at the forthcoming economic summit conference in London on May 7.

6202 Dirksen Building Select Intelligence

Closed business meeting.

S-407, Capitol

Small Business

To mark up bills concerning disaster relief for small business concerns (S. 832, 1206, and 1259).

424 Russell Building

10:30 a.m.

Human Resources Employment, Poverty, and Migratory Labor Subcommittee

To hold hearings on H.R. 2992, to amend and extend the Comprehensive Employment and Training Act, and S. 1242 to provide employment and training opportunities for youth.

ntil 2 p.m. 357 Russell Building

Until 2 p.m.

Judiciary

Business meeting, to consider subcom-mittee budgets, pending nominations, and S. 11, to provide for the appointment of additional District court judges.

2300 Dirksen Building

11:00 a.m.

Foreign Relations

Foreign Assistance Subcommittee

To hold hearings on proposed fiscal year 1978 authorizations for the Security Assistance Program.

4221 Dirksen Building

1:00 p.m.

Appropriations

Interior Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior, to hear public witnesses.

1114 Dirksen Building

2:00 p.m.

Appropriations

Legislative Subcommittee

To hold hearings on proposed budget estimate for fiscal year 1978 for the legislative branch, to hear J. Stanley Kimmitt, Secretary of the Senate, and F. Nordy Hoffman, Senate Sergeant at Arms.

S-128 Capitol

Appropriations

State, Justice, Commerce, Judiciary Subcommittee

To continue hearings on proposed budget estimates for fiscal year 1978 for the EEOC, FTC, and SBA.

Armed Services

General Legislation Subcommittee

To continue hearings on proposed authorizations for fiscal year 1978 for the Defense Civil Preparedness Agency. 224 Russell Building 2:15 p.m.

Foreign Relations

To hold hearings on the nominations of Michael J. Mansfield, of Montana, to be Ambassador to Japan; W. Tapley Bennett, Jr., of Georgia, to be Permanent Representative on the Council of NATO; Samuel W. Lewis, of Texas, to be Ambassador to Israel; George S. Vest, of Maryland, to be Ambassador to Pakistan; and Robert F. Goheen, of New Jersey, to be Ambassador to India.
